---

The lapse of seven eventful years since the printing of the last edition of this book has necessitated many changes to bring it up to date. The inexhaustible stores of Old Japan have also again been drawn upon. Captain Mønter, of the Royal Danish Navy, has kindly contributed a new article on the *Navy*, and Mr. H. V. Henson has supplied details which have been incorporated in *Trade, Shipping*, and other articles wherein commercial matters are touched on. Information on other points and various corrections have reached us from Baron Sannomiya, Mr. William Anderson, F.R.C.S., Mr. R. Masujima, the Abbé Félix Evrard, and other good friends, to all of whom we tender our sincere thanks. To Mr. W. B. Mason, above all others, our liveliest gratitude is due for unwearying assistance. Though extended by the insertion of a dozen new articles and various additions to the old, the book has been reduced in bulk by the use of a different size of page, in order to make it more convenient for the pocket.

With these few words, we once more commend *Things Japanese* to the kind indulgence of the public. The book would seem to have found favour in many quarters, to judge from the manner in which, years after its first appearance, newspapers and book-makers continue to quote wholesale from it without acknowledgment.

Tokyo, 5th March, 1898.

## INTRODUCTORY CHAPTER.

---

To have lived through the transition stage of modern Japan makes a man feel preternaturally old; for here he is in *fin de siècle* times, with the air full of talk about bicycles and bacilli and "spheres of influence," and yet he can himself distinctly remember the Middle Ages. The dear old *samurai* who first initiated the present writer into the mysteries of the Japanese language wore a cue and two swords. This relic of feudalism now sleeps in Nirvâna. His modern successor, fairly fluent in English, and dressed in a serviceable suit of dittos, might almost be a European, save for a certain obliqueness of the eyes and scantiness of beard. Old things pass away between a night and a morning. The Japanese boast that they have done in thirty years what it took Europe half as many centuries to accomplish. Some even go further, and twit us Westerns with falling behind in the race. Not long ago, a Japanese pamphleteer refused to argue out a point of philosophy with a learned German resident of Tôkyô, on the score that Europeans, owing to their antiquated Christian prejudices, were not capable of discussing such matters impartially.

Thus does it come about that, having arrived in Japan in 1878, we ourselves feel well-nigh four hundred years old, and

assume without more ado the two well-known privileges of old age,—gariulity and an authoritative air. We are perpetually being asked questions about Japan. Here then are the answers, put into the shape of a dictionary, not of words but of things,—or shall we rather say a guide-book, less to places than to subjects?—not an encyclopædia mind you, not the vain attempt by one man to treat exhaustively of all things, but only sketches of many things. The old and the new will be found cheek by jowl. What will not be found is padding; for padding is unpardonable in any book on Japan, where the material is so plentiful that the chief difficulty is to know what to omit.

In order to enable the reader to supply deficiencies and to form his own opinions, if haply he should be of so unusual a turn of mind as to desire so to do, we have, at the end of almost every article, indicated the names of trustworthy works bearing on the subject treated in that article. For the rest, this book explains itself. Any reader who detects errors or omissions in it will render the author an invaluable service by writing to him to point them out. As a little encouragement in this direction, we will ourselves lead the way by presuming to give each reader, especially each globe-trotting reader, a small piece of advice. We take it for granted, of course, that there are no Japanese listening, and the advice is this :—

Whatever you do, don't expatiate, in the presence of Japanese of the new school, on those old, quaint, and beautiful things Japanese which rouse your most genuine admiration. Anti-quoted persons do doubtless exist here and there to whom Budd-

hist piety is precious; others may still secretly cherish the swords bequeathed to them by their knightly forefathers; quite a little coterie has taken up with art; and there are those who practise the tea ceremonies, arrange flowers according to the traditional esthetic rules, and even perform the mediæval lyric dramas. But all this is merely a backwater. Speaking generally, the educated Japanese have done with their past. They want to be somebody else and something else than what they have been and still partly are. When Sir Edwin Arnold came to Tōkyō, he was entertained at a banquet by a distinguished company including officials, journalists, and professors, in fact, representative modern Japanese of the best class. In returning thanks for this hospitality, Sir Edwin made a speech in which he lauded Japan to the skies—and lauded it justly—as the nearest earthly approach to Paradise or to Lotus-land—so fairy-like, said he, is its scenery, so exquisite its art, so much more lovely still that almost divine sweetness of disposition, that charm of demeanour, that politeness humble without servility and elaborate without affectation, which place Japan high above all other countries in nearly all those things that make life worth living. (We do not give his exact words, but we give the general drift.)—Now, do you think that the Japanese were satisfied with this meed of praise? Not a bit of it. Out comes an article next morning in the chief paper which had been represented at the banquet—an article acknowledging, indeed, the truth of Sir Edwin's description, but pointing out that it conveyed, not praise, but pitiless condemnation. Art forsooth, scenery, sweetness of disposition! cries this editor. Why did

not Sir Edwin praise us for huge industrial enterprises, for commercial talent, for wealth, political sagacity, powerful armaments? Of course it is because he could not honestly do so. He has gauged us at our true value, and tells us in effect that we are only pretty weaklings.

Since Sir Edwin Arnold's time, doubtless, the China war has been fought and won, and has proved to an astonished world and to the Japanese themselves that they are no weaklings, but extremely plucky, practical men. Since his time, too, Japan's sunny towns and even her green valleys have been darkened by the smoke of factory chimneys, and the flag of her merchant marine has been seen in every sea. Nevertheless, the feeling above alluded to persists, and to us it appears perfectly natural under the circumstances. For, after all, Japan must continue ever more and more to modernise herself if the basis of her new departure is to remain solid, if her swiftly growing ambition is to be gratified, and if her minister of finance is to be able to make both ends meet. Besides which, our European world of thought, of enterprise, of colossal scientific achievement, has been as much a wonder-world to the Japanese as Old Japan could ever be to us. There is this difference, however. Old Japan was to us a delicate little wonder-world of sylphs and fairies. Europe and America, with their railways, their telegraphs, their gigantic commerce, their gigantic armies and navies, their endless applied arts founded on chemistry and mathematics, were to the Japanese a wonder-world of irresistible genii and magicians. The Japanese have, it is true, evinced less appreciation of our literature.

They esteem us whimsical for attaching so much importance as we do to poetry, to music, to religion, to speculative disquisitions. Our material greatness has completely dazzled them, as well it might. They know also well enough—for every Eastern nation knows it—that our Christian and humanitarian professions are really nothing but bunkum.\* The history of India, of Egypt, of Turkey, is no secret to them. Equally familiar is the sweet reasonableness of California's treatment of the Chinese, while poor little Hawaii seems likely to be gobbled up under their very noses. They would be blind indeed, did they not see that their best security for safety and success lies in the endeavour to be strong, and in the endeavour not to be too different from the rest of mankind; for the mob of Western nations will tolerate eccentricity of appearance no more than will a mob of roughs.

Indeed, scarcely any even among those who implore the Japanese to remain as they are, refrain, as a matter of fact, from urging them to make all sorts of changes. "Japanese dress for ladies is simply perfection," we hear one of these

---

\*It has pained the writer to find this sentence misinterpreted by some otherwise friendly critics of the last edition (the *Spectator*, for instance) into so shallow, and arrogant an assertion as that "Christianity and humanitarianism are nothing but bunkum."(!) What is meant is simply what is said in the text, namely, that *our professions* are bunkum. No doubt, individuals may occasionally be met with whose practice carries out their profession. But can any impartial student of history deny that, *as nations*, the Christian nations (so-called) flout their professions with their deeds? Sometimes their hypocrisy is piquantly transparent, as when, to take a very modern instance, we find figuring prominently in the list of reasons officially alleged for a certain act of annexation the consideration that the annexing country "has largely contributed to bestow on the natives the blessings of Christian civilisation." Could the most moral wolf desire any whiter wool for his sheep's clothing?

persons cry ; “ only don’t you think that gloves might be added with advantage ? And then, too, ought not something to be done with the skirt to prevent it from opening in front, just for the sake of decency, you know ? ”—Says another, whose special vanity is Japanese music (there is considerable distinction about this taste, for it is a rare one)—says he—“ Now please keep your music from perishing. Keep it just as it is, so curious to the archæologist, so beautiful, for all that the jeerers may say. There is only one small thing which I would advise you to do, and that is to harmonise it. Of course that would change its character a little. But no one would notice it, and the general effect would be improved.”—Yet another, an enthusiast for faience, wishes Japanese decorative methods to be retained, but to be applied to French forms, because no cup or plate made in Japan is so perfectly round as are the products of French kilns. A fourth delights in Japanese brocade, but suggests new breadths, in order to suit making up into European dresses. A fifth wants to keep Japanese painting exactly as it is, but with the trivial addition of perspective. A sixth—but a truce to the quoting of these self-confuting absurdities. Put into plain English, they mean, “ Do so-and-so, only don’t do it. Walk north, and at the same time take care to proceed in a southerly direction.”

Meanwhile the Japanese go their own way. Who could expect that either their social conditions or their arts should remain unaltered when all the causes which produced the Old Japan of our dreams have vanished ? Feudalism has gone, isolation has gone, beliefs have been shattered, new idols have

been set up, new and pressing needs have arisen. In the place of chivalry there is industrialism, in the place of a small class of aristocratic native connoisseurs there is a huge and hugely ignorant foreign public to satisfy. All the causes have changed, and yet it is expected that the effects will remain as heretofore!

No. Old Japan is dead, and the only decent thing to do with the corpse is to bury it. Then you can set up a monument over it, and, if you like, come and worship from time to time at the grave; for that would be quite "Japanesey." This unpretentious book is intended to be, as it were, the epitaph recording the many and extraordinary virtues of the deceased,—his virtues, but also his frailties. For, more careful of fact than the generality of epitaphists, we have ventured to speak out our whole mind on almost every subject, and to call things by their names, being persuaded that true appreciation is always critical as well as kindly.

\* \* \* \* \*

Yes, we repeat it, Old Japan is dead and gone, and Young Japan reigns in its stead, as opposed in appearance and in aims to its predecessor as history shows many a youthful prince to have been to the late king, his father. The steam-whistle, the newspaper, the voting-paper, the pillar-post at every street-corner and even in remote villages, the clerk in shop or bank or public office hastily summoned from our side to answer the ring of the telephone bell, the railway replacing the palanquin, the iron-clad replacing the war-junk,—these and a thousand other startling changes testify that Japan is transported ten thousand

miles away from her former moorings. She is transported out of her patriarchal calm into the tumult of Western competition,—a competition active right along the line, in politics and war, in industries, in shipping, possibly even in colonisation. Nevertheless, as Madcap Hal, when once seated on the throne, showed plainly, despite all individual differences, that the blood of prudent Henry IV. ran in his veins, so is it abundantly clear to those who have dived beneath the surface of the modern Japanese upheaval that more of the past has been retained than has been let go. It is not merely that the revolution itself was an extremely slow growth, a gradual movement taking a century and a half to mature.\* It is that the national character persists intact, manifesting no change in essentials. Circumstances have deflected it into new channels, that is all. The arduous intellectual training of the Japanese gentry of former days—the committing to memory of the Confucian classics—fostered a mental habit at once docile, retentive, apt for detail. With these very same qualities their sons sit to-day at the feet of the science of the West. The devotion of the *samurai* to his *daimyō* and his clan was unsurpassed; for them, at any time, he would offer up his life, his all. The same loyal flame glows still at a white heat; only, the horizon having been widened by the removal of provincial barriers and the fall of petty feudal thrones, the one Emperor, the united nation have focused all its rays into a single burning-point. The Japanese of former days, even when political combination for any purpose

---

\* See article on *History*.

was penal, always moved in families, in clans, in wards of townsmen, in posses of peasants, in any corporate way rather than as individuals. The boycotts, the combines, the sudden fashions and gusts of feeling before which the whole nation bends like grass, manifest exactly the same trait in novel guise. Even the exclusive and anti-foreign spirit of Old Japan already shows symptoms of reappearing after but thirty years' submergence. To take a more radical characteristic, the ingrained tendency of the national mind towards the imitation of foreign models does but repeat to-day, and on an equally large scale, its exploit of twelve centuries ago. At that early period it flung itself on Chinese civilisation as it has now flung itself on ours; and in both cases alike certain reservations have been made. The old national religion, for instance, was not abolished then, neither has it been abolished now, though in both cases full latitude has been accorded by this nation of thorough-going latitudinarians to the alien religious and philosophical ideas.

Having absorbed all the manifestly useful elements of our culture, Young Japan's eager wish is to communicate these to her neighbours. To act as broker between West and East is her self-imposed mission. Korea's regeneration was Japan's work till Russia stepped in. Even the ambition which prompted the China war was perhaps tinged with the generous desire to see China regenerated on Western lines. We cannot help thinking that Japan's precept and example will more rapidly leaven the Asiatic lump with the leaven of Europeanism than Europe has been able to do in her own person,—and this for the simple

reason that though Japan and her Asiatic neighbours heartily despise each other, as the manner of neighbours is, they nevertheless understand each other in a way in which we can never hope to understand any of them. Racial affinity and a common past count for more than everything else put together.

It may be that certain alarmist writers prophesy truly when they predict that the Far-Eastern gain will be our loss, that—if not in war, at any rate in commerce—Asia's battalions form a menace to our future. Who can tell? Were it really so, Japan would be as the drum-major marching at the head of the line, or let us rather say the pretty, coquettish *virandière*. Who could help falling in love with so fair an enemy?

---

# THINGS JAPANESE.

---

**Abacus.** Learn to count on the abacus—the *soroban*, as the Japanese call it—and you will often be able to save a large percentage on your purchases. The abacus is that instrument, composed of beads sliding on wires fixed in a frame, with which many of us learnt the multiplication table in early childhood. In Japan it is used, not only by children, but by adults, who still mostly prefer it to our method of figuring with pen and paper. As for mental arithmetic, that does not exist in this archipelago. Tell any ordinary Japanese to add 5 and 7: he will flounder hopelessly, unless his familiar friend, the abacus, is at hand. And here we come round again to the practical advantage of being able to read off at sight a number figured on this instrument. You have been bargaining at a curio-shop, we will suppose. The shopman has got perplexed. He refers to his list, and then calculates on the instrument, which of course he takes for granted that you do not understand, the lowest price for which he can let you have the article in question. Then he raises his head, and, with a bland smile, assures you that the cost of it to himself was so and so, naming a price considerably larger than the real one. You have the better of him, if you can read his figuring of the sum. If you cannot, ten to one he has the better of you.

The principle of the abacus is this:—Each of the five beads in the broad lower division of the board represents one unit, and each solitary bead in the narrow upper division represents five

units. Each vertical column is thus worth ten units. Furthermore, each vertical column represents units ten times greater than those in the column immediately to the right of it, exactly as in our own system of notation by means of Arabic numerals. Any sum in arithmetic can be done on the abacus, even to the extracting of square and cube roots; and Dr. Knott the chief English—or, to be quite correct, the chief Scotch—writer on the subject, is of opinion that Japanese methods excel ours in rapidity. Perhaps he is a little enthusiastic. One can scarcely help thinking so of an author who refers to a new Japanese method of long division as “almost fascinating.” The Japanese, it seems, have not only a multiplication table, but a division table besides. We confess that we do not understand the division table, even with Dr. Knott’s explanations. Indeed we will confess more: we have never learnt the abacus at all. If we recommend others to learn it, it is because we hope that, for their own sake, they will do as we tell them and not do as we do. Personally we have found one method of ciphering enough, and a great deal more than enough, to poison the happiness of one life-time.

**Book recommended.** *The Abacus, in its Historic and Scientific Aspects*, by Dr. C. G. Knott, F. R. S. E., printed in Vol. XIV. Part I. of the “Asiatic Transactions.”

**Abdication.** The abdication of monarchs, which is exceptional in Europe, has for many ages been the rule in Japan. It came into vogue in the seventh century together with Buddhism, whose doctrines led men to retire from worldly cares and pleasures into solitude and contemplation. But it was made use of by unscrupulous ministers, who placed infant puppets on the throne, and caused them to abdicate on attaining to maturity. Thus it was a common thing during the Middle Ages for three Mikados to be alive at the same time—a boy on the throne, his father or brother who had abdicated, and his grandfather or other relative who had abdicated also. From A.D. 987 to 991, there were as many as four Mikados all alive

together—Reizei Tennō, who had ascended the throne at the age of eighteen, and who abdicated at twenty; En-yu Tennō, emperor at eleven and abdicated at twenty-six; Kwazan Tennō, emperor at seventeen and abdicated at nineteen; and Ichijō Tennō, who had just ascended the throne as a little boy of seven. Under the Mikado Go-Nijō (A.D. 1802—8) there were actually *five* Mikados all alive together, namely Go-Nijō Tennō himself, made emperor at seventeen, and his four abdicated predecessors—Go-Fukakusa Tennō, emperor at four and abdicated at seventeen; Kameyama Tennō, emperor at eleven and abdicated at twenty-six; Go-Uda Tennō, emperor at eight and abdicated at twenty-one; and Fushimi Tennō, emperor at twenty-three and abdicated the same year. Sometimes it was arranged that the children of two rival branches of the Imperial family should succeed each other alternately. This it was, in part at least, which led to the civil war in the fourteenth century between what were known as “the Northern and Southern Courts;” for it was of course impossible that so extraordinary an arrangement should long be adhered to without producing violent dissensions.

After a time, it became so completely customary that the monarch in name must not be monarch in fact, and *vice versa*, that abdication, or rather deposition (for that is what it practically amounted to), was almost a *sine quâ non* of the inheritance of such scanty shreds of authority as imperious ministers still deigned to leave to their nominal lords and masters. When a Mikado abdicated, he was said to *ascend* to the rank of abdicated Mikado. It was no longer necessary, as at an earlier period, to sham asceticism. The abdicated Mikado surrounded himself with wives and a whole court, and sometimes really helped to direct public affairs. Nor was abdication confined to sovereigns. Heads of noble houses abdicated too. In later times the middle and lower classes began to imitate their betters. Until the period of the late revolution, it was an almost

universal custom for a man to become what is termed an *inkyō* after passing middle age. *Inkyō* means literally "dwelling in retirement." He who enters on this state gives over his property to his heirs, generally resigns all office, and lives on the bounty of his children, free to devote himself henceforth to pleasure or to study. Old age being so extraordinarily honoured in Japan, the *inkyō* has no reason to dread Lear's fate. He knows that he will always be dutifully tended by sons who are not waiting to find out "how the old man will cut up." The new government of Japan is endeavouring to put a stop to the practice of *inkyō*, as being barbarous because not European. But to the people at large it appears, on the contrary, barbarous that a man should go on toiling and striving, when past the time of life at which he is fitted to do good work.

**Book recommended.** *The Gakushikain*, by Walter Dening, printed in Vol. XV. Part I. of the "Asiatic Transactions," p. 72 *et seq.*

**Acupuncture.** Acupuncture, one of the three great nostrums of the practitioners of the Far East (the other two being massage and the moxa), was brought over from China to Japan before the dawn of history. Dr. W. N. Whitney describes it as follows in his *Notes on the History of Medical Progress in Japan*, published in Vol. XII. Part IV. of the "Asiatic Transactions," p. 354:—

"As practised by the Japanese acupuncturists, the operation consists in perforating the skin and underlying tissues to a depth, as a rule, not exceeding one-half to three quarters of an inch, with fine needles of gold, silver, or steel. The form and construction of these needles vary, but, generally speaking, they are several inches long, and of an average diameter of one forty-eighth of an inch. Each needle is usually fastened into a handle, which is spirally grooved from end to end.

"To perform the operation, the handle of the needle is held lightly between the thumb and first finger of the left hand, the point resting upon the spot to be punctured. A

slight blow is then given upon the head of the instrument with a small mallet held in the right hand ; and the needle is gently twisted until its point has penetrated to the desired depth, where it is left for a few seconds and then slowly withdrawn, and the skin in the vicinity of the puncture rubbed for a few moments. The number of perforations range from one to twenty, and they are usually made in the skin of the abdomen, although other portions of the body are not unfrequently punctured."

**Adams (Will).** Will Adams, the first Englishman that ever resided in Japan, was a native of Gillingham, near Chatham, in the county of Kent. Having followed the sea from his youth up, he took service, in the year 1598, as "Pilot Maior of a fleete of five sayle," which had been equipped by the Dutch East India Company for the purpose of trading to Spanish America. From "Perrow," a portion of the storm-tossed fleet came on to "Iapon," arriving at a port in the province of Bungo, not far from "Langasacke" (Nagasaki), on the 19th April, 1600. From that time until his death in May 1620, Adams remained in an exile which, though gilded, was none the less bitterly deplored. The English pilot, brought first as a captive into the presence of Ieyasu, who was then practically what Adams calls him, "Emperour" of Japan, had immediately been recognised by that shrewd judge of character as an able and an honest man. That he and his nation were privately slandered to Ieyasu by "the Iesuites and the Portingalls," who were at that time the only other Europeans in the country, probably did him more good than harm in the Japanese ruler's eyes. He was retained at the Japanese court, and employed as a shipbuilder, and also as a kind of diplomatic agent when other English and Dutch traders began to arrive. In fact, it was by his good offices that the foundations were laid both of English trade in Japan and also of the more permanent Dutch settlement. During his latter years he for a time

exchanged the Japanese service for that of the English factory established by Captain John Saris at "Firando" (Hirado) near Nagasaki; and he made two voyages, one to the Luchu Islands and another to Siam. His constantly reiterated desire to see his native land again, and his wife and children, was to the last frustrated by adverse circumstances. So far as the wife was concerned, he partially comforted himself, sailor fashion, by taking another—a Japanese with whom he lived comfortably for many years on the estate granted him by Ieyasu at Hemi, where their two graves are shown to this day. Hemi, at that time a separate village, has since become a suburb of the bustling modern seaport, Yokosuka, and a railway station now occupies the site of the old pilot's abode. Another adventurer, who visited him there, describes Will Adams's place thus: "This Phebe<sup>\*</sup> is a Lordshipp geuen to Capt. Adames pr. the ould Emperour†, to hym and his for eauer, and confermed to his sonne, called Joseph. There is above 100 farms, or howsholds, vppon it, besides others vnder them, all which are his vassalls, and he hath power of lyfe and death ouer them they being his slaues; and he hauing as absolute authoritie over them as any tono (or king) in Japan hath over his vassales." From further details it would seem that he used his authority kindly, so that the neighbours "reioiced (as it should seeme) of Captain Adames retorne."

Will Adams's letters have been published by the Hakluyt Society in their "Memorials of Japon" (*sic*), and republished in a cheaper form at Yokohama. They are well-worth reading, both for the life-like silhouette of the writer which stands out from their quaintly spelt pages, and for the picture given by him of Japan as it then was, when the land swarmed with Catholic friars and Catholic converts, when no embargo had yet been

---

\* Our author means Hemi.

† Ieyasu was then dead.

laid on foreign commerce, and when the native energy of the Japanese people had not yet been numbed by two centuries and a half of bureaucracy and timid seclusion.

**Adoption.** It is strange, but true, that you may often go into a Japanese family and find half a dozen persons calling each other parent and child, brother and sister, uncle and nephew, and yet being really either no blood relations at all, or else relations in quite different degrees from those conventionally assumed. Galton's books could never have been written in Japan; for though genealogies are carefully kept, they mean nothing, at least from a scientific point of view,—so universal is the practice of adoption, from the top of society to the bottom. This it is which explains such apparent anomalies as a distinguished painter, potter, actor, or what not, almost always having a son distinguished in the same line,—he has simply adopted his best pupil. It also explains the fact of Japanese families not dying out.

So completely has adoption become part and parcel of the national life that Mr. Shigeno An-eki, the best Japanese authority on the subject, enumerates no less than ten different categories of adopted persons. Adoption is resorted to, not only to prevent the extinction of families and the consequent neglect of the spirits of the departed, but also in order to regulate the size of families. Thus, a man with too many children hands over one or more of them to some friend who has none. To adopt a person is also the simplest way to leave him money, it not being usual in Japan to nominate strangers as one's heirs. Formerly, too, it was sometimes a means of money-making, not to the adopted, but to the adopter. "It was customary"—so writes the authority whom we quote below—"for the sons of the court-nobles when they reached the age of majority to receive an income from the Government. It often happened that when an officer had a son who was, say, only two or three years old, he would adopt a lad who was about

fifteen (the age of majority), and then apply for a grant of land or rice for him; after he had secured this, he would make his own son the *yōshi* [adopted son] of the newly-adopted youth, and thus, when the former came of age, the officer was entitled to apply for another grant of land."—With this may be compared the plan often followed by business people at the present day. A merchant adopts his head clerk, in order to give him a personal interest in the firm. The clerk then adopts his patron's son, with the understanding that he himself is to retire in the latter's favour when the latter shall be of a suitable age. If the clerk has a son, then perhaps that son will be adopted by the patron's son. Thus a sort of alternate headship is kept up, the surname always remaining the same.

For some time after the late revolution, adoption was a favourite method of evading the conscription, as only sons were exempted from serving. Fond parents, anxious to assist a favourite son to this exemption, would cause him to be adopted by some childless friend. After a few years, it might perhaps be possible to arrange for the lad's return to his former family and resumption of his original surname.

The sole way in which a foreigner can be naturalised is by getting a Japanese with a daughter to adopt him, and then marrying the daughter. This may sound like a joke, but it is not. It is a sober, legal fact, recognised as such by the various judicial and consular authorities, and it has been acted on in several well-authenticated instances.

We recommend, as a good occupation for a rainy day, the endeavour to trace out the real relationships (in our European sense of the word) of some of the reader's Japanese servants or friends. Unless we are much mistaken, this will prove to be a puzzle of the highest order of difficulty. (See also article on MARRIAGE.)

❖ **Book recommended.** *The Gakushikain*, by Walter Dening, printed in Vol. XV. Part I. of the "Asiatic Transactions," p. 72, *et seq.*

**Agriculture.** Till recently the Japanese had neither manufactures nor foreign commerce, neither have they yet any flocks of sheep and goats, any droves of geese, turkeys, or pigs. Even cattle are comparatively scarce, and neither their flesh nor their milk is in general use. The pasture meadow and the farmyard are alike lacking. Here, far more than in the West, agriculture in its narrower sense has been all in all, forming the basis on which the whole social fabric rests. Justly, therefore, in feudal times, did the peasantry rank next to the *samurai* or gentry, and before the merchants and mechanics. Even under the new régime, more than half the population is engaged in field labour, and probably more than half the national revenue flows from that source. There are no large landed proprietors. As a rule, each farmer or peasant tills his own field with the help of his sons and often his wife and daughters; and the land is really his own, for the doctrine that everything belongs absolutely to the Mikado is, of course, only a convenient legal fiction. No wonder that he works with a will.

In this land of mountains, barely twelve per cent of the entire surface can be cultivated, and even the cultivable portion is not highly fertile by nature. It is made so by subsoil working, by minutely careful weeding, by manure judiciously and laboriously applied, by terracing, and by an elaborate method of irrigation. The whole agricultural system came from China, and has altered little since the earliest ages. The peasantry are the most conservative class in the nation, and their implements still strangely primitive,—the plough in common use, for instance, differing little from that of Egypt in the time of the Pharaohs. The hoe is in great request. Spades of various shapes, harrows, and sickles are also used, together with an extremely rude type of flail and stamping-trough; but Japanese economy knows nothing of wagons or wheelbarrows.

The Chinese and Japanese enumerate five cereals as the staples to which agricultural labour should be devoted. These

are rice, barley, wheat, millet, and beans.\* But rice ranks above all the rest,—equal in fact to all the others put together. These others are grown chiefly as winter crops, when the rice-fields have to lie fallow, or else in small patches, or on the higher ground, which want of water or a harsher climate renders unfit for the cultivation of the more important commodity.

The preparation of the rice-fields—"paddy-fields," as Europeans often call them—is extremely arduous, involving not only much hoeing, but the construction of perforated mud dams and a whole system of terracing, whereby water from a neighbouring stream is led gradually down from field to field;—for all high-class rice requires flooding, only an inferior sort being grown in the dry. Various manures are employed. The commonest is night-soil, whose daily conveyance all about the country apparently causes no distress to native noses. The seed is sown in small beds about the end of April, and it sprouts in five or six days. Early in June, the young shoots are plucked up and transplanted in rows. The generally lifeless fields may at that time be seen full of men and women standing knee-deep in the water and mud. Then comes the hot summer. What traveller in Japan will not recall, as the most characteristic feature of the summer landscape, those fields of vivid green, separated, chessboard-like, into squares which fill a gradually widening valley flanked by hills that rise abruptly, as if the whole had been cut out by the hand of man, as indeed it has through centuries of terracing?

The rice-plant blossoms early in September, is reaped in October, and then hung up on short poles. Threshing is done either with the primitive flails above mentioned, or with a sort of large comb or heckle. Many Europeans believe that two rice-crops are produced in the year. This occurs as a solitary

---

\* The enumeration has differed slightly according to time and place.

exception in the province of Tosa, where the warming effect of the *Kuro-shio*, or Japanese Gulf-Stream, makes itself felt with special energy. Elsewhere such a thing is rendered impossible by the length and severity of the winter.

Japanese rice is the best in Asia, and the manner in which it is cooked—quite different from the dry boiling of India—is the most palatable and nutritious. Every one lives on it who can afford to do so; but as a rule, the peasantry cannot. Wheat, barley, and especially millet, are the real staples throughout the rural districts, rice being there treated as a luxury to be brought out only on high days and holidays, or to be resorted to in case of sickness. We once heard a beldame in a country village remark to another, with a grave shake of the head: "What! Do you mean to say that it has come to having to give her rice?"—the unexpressed inference being that the patient's case must be alarming indeed, if the family had thought it necessary to resort to so expensive a dainty.

In the extreme south the sweet potato, which was introduced as late as A.D. 1698, now forms the chief food of the common people. Besides the cereals, vegetables of various sorts are raised, but are eaten chiefly pickled and in small quantities.

Some few of the principal agricultural industries, such as tea, camphor, and lacquer, will be found treated in separate articles.

**Books recommended.** For a careful general account, Rein's *Industries of Japan*—For fuller technical details, Dr. M. Fesca's *Beiträge zur Kenntniss der japanischen Landwirtschaft*, and shorter articles by the same in the "German Asiatic Transactions."—Dr. K. Rathgens' *Japan's Volkswirtschaft und Staatshaushalt*—The laws and customs of the peasantry are treated with interesting minuteness in Simmon's and Wigmore's *Notes on Land Tenure and Local Institutions in Old Japan*, published in Vol. XIX. Part I. of the "Asiatic Transactions."

**Ainos.** The Ainos, called by themselves *Ainu*, that is "men," are a very peculiar race, now inhabiting only the northern island of Yezo, but formerly widely spread all over the Japanese archipelago. The Japanese proper, arriving from

the south-west, gradually pressed the Ainos back towards the east and north. It was only in the eighteenth century that they were completely subjugated. In retreating, the aborigines left the country strewn with place-names belonging to their own language. Such are, for instance, *Noto*, the name of the big promontory stretching out into the Sea of Japan (*nottu* means "promontory" in Aino), the *Tone-gawa*, or River Tone, near Tōkyō (*tanne* is Aino for "long"), and hundreds of others. So far as blood, however, is concerned, the Japanese have been little, if at all, affected by Aino influence. The simple reason is that the half-breeds die out. The Ainos are the hairiest race in the whole world, their luxuriantly thick black beards and hirsute limbs giving them an appearance which contrasts strangely with the smoothness of their Japanese lords and masters. They are of sturdy build, and distinguished by a flattening of certain bones of the arm and leg (the *humerus* and *tibia*), which has been observed nowhere else except in the remains of some of the cave-men of Europe. The women tattoo moustaches on their upper lip and geometrical patterns on their hands. Both sexes are of a mild and amiable disposition, but are terribly addicted to drunkenness. They are filthily dirty, the practice of bathing being altogether unknown.

The Ainos were till recently accustomed to live on the produce of the chase and the sea fisheries; but both these sources of subsistence have diminished since the settling of the island by the Japanese. Consequently they no longer hold up their heads as in former days, and notwithstanding the well-intentioned efforts of a paternal government, they seem doomed to disappear, though it is true that during the last dozen years their numbers have remained stationary at about fifteen thousand. Their religion is a simple nature-worship. The sun, wind, ocean, bear, etc., are deified under the title of *kamui*, "god," and whittled sticks are set up in their honour. The

bear, though worshipped, is also sacrificed and eaten with solemnities that form the most original and picturesque feature of Aino life. Some of the Aino tales are quaint. Most of them embody an attempt to account for some natural phenomenon. The following may serve as a specimen:—

WHY DOGS CANNOT SPEAK.

*Formerly dogs could speak. Now they cannot. The reason is that a dog belonging to a certain man, a long time ago, inveigled his master into the forest under the pretext of showing him game, and there caused him to be devoured by a bear. Then the dog went home to his master's widow, and lied to her, saying: "My master has been killed by a bear. But when he was dying, he commanded me to tell you to marry me in his stead." The widow knew that the dog was lying. But he kept on urging her to marry him. So at last, in her grief and rage, she threw a handful of dust into his open mouth. This made him unable to speak any more, and therefore no dogs can speak even to this very day.*

The Aino language is simple and harmonious. Its structure in great measure resembles that of Japanese; but there are some few fundamental divergences, such, for instance, as the possession of true personal pronouns and the formation of the passive voice by a prefix. The vocabulary, too, is quite distinct. The system of counting is extraordinarily cumbrous. Thus, if a man wants to say that he is thirty-nine years old, he must express himself thus: "I am nine, plus ten taken from two score." In Mr. Batchelor's translation of Matthew XII. 40, the phrase "forty days and forty nights" is thus rendered: *tukap rere ko tu hotne rere ko, kunne rere ko tu hotne rere ko*, that is, "day three days two score three days, black three days two score three days." The Ainos know nothing of the use of letters. Tales like the one we have quoted, and rude songs which are handed down orally from generation to generation, form their only literature.

**Books recommended** *The Annals of Japan*, by Rev. J. Batchelor, gives the best general account in a popular form. See also A. H. Savage Landor's *Alone with the Haughty Ainu*, and Miss Bird's *Unbeaten Tracks in Japan*—Students are referred to the *First Memoir of the Literature College of the Imperial University of Japan*, by Chamberlain and Batchelor, for full details concerning Aino mythology, grammar, place-names, etc., to the former writer's *Aino Folk-Lore*, in Vol. VI. Part I. of the *Folk Lore Journal*, and to numerous papers by Batchelor scattered through the *Asiatic Transactions*, etc. The Memoir above quoted gives a fairly complete bibliography of Yezo and the Ainos—The best Japanese work on the subject is the *Ezo Fuzoku Isan*, published by the Kaitakushi in 1882. It is in twenty volumes.

**Amusements.** The favourite amusements of the Japanese are the ordinary theatre (*shibui*); the Nō theatre, (but this is attended only by the aristocracy); wrestling matches, —witnessing, not taking part in them; dinners enlivened by the performances of singing and dancing-girls; visits to temples, as much for purposes of pleasure as of devotion; picnics to places famous for their scenery, and especially to places noted for some particular blossom, such as the plum, cherry, or wistaria. The Japanese also divert themselves by composing verses in their own language and in Chinese, and by playing chess, checkers, and various games of the “Mother Goose” description, of which *sugoroku* is the chief. Ever since the early days of foreign intercourse they have likewise had certain kinds of cards, of which the *hana-garuta*, or “flower-cards,” are the most popular kind—so popular, indeed, and seductive that there is an official veto on playing the game for money. The cards are forty-eight in number, four for each month of the year, the months being distinguished by the flowers proper to them, and an extra value being attached to one out of each set of four, which is further distinguished by a bird or butterfly, and to a second which is inscribed with a line of poetry. Three people take part in the game, and there is a pool. The system of counting is rather complicated, but the ideas involved are graceful. New-year is the great time for this game, when family parties sit up over it all night long.

Some of the above diversions are shared in by the ladies; but

take it altogether, their mode of life is much duller than that of their European sisters. Confucian ideas concerning the subjection of women still obtain to a great extent. Women are not, it is true, actually shut up, as in India; but it is considered that their true vocation is to sit at home. Hence visiting is much less practised in Japan than with us. It is further to be observed, to the credit of the Japanese, that amusement, though permitted, is never exalted by them to the rank of the great and serious business of life. In England—at least among the upper classes—a man's shooting, fishing, and golf, a girl's dances, garden-parties, and country-house visitings appear to be the centre round which all the family plans revolve. In Japan, on the contrary, amusements are merely picked up by the way, and are all the more appreciated.\*

Some ten or twelve years ago, it looked as if the state of things here sketched were about to undergo considerable modification. Poker, horse-racing, even shooting and lawn-tennis, had begun to find devotees among Japanese men, while the fair sex, abandoning their own charming costume for the corsets and furbelows of Europe, were seen boldly to join in the ball-room fray. True, as Netto wittily remarks in his *Papierschmetterlinge aus Japan*, “most of them showed by the expression of their faces that they were making a sacrifice on the altar of civilisation.” Happily a reaction has since supervened, elder customs and costumes have been resumed, and on the now very rare occasions when Japanese ladies enter a ball-room, it is as spectators only, and in their infinitely more attractive native garb.

The sports of Japanese children include kite-flying, top-spinning, battledoor and shuttlecock, making snow-men, playing

---

\* A critic of the first edition, writing in the “Hyōgo News,” has humorously suggested that, had the author been a merchant, he would have reversed this dictum, and have said that that which the Japanese merely picked up by the way was *business*!

with dolls, etc., etc,—in fact, most of our old nursery friends, but modified by the *genius loci*. (See also Article on POLO.)

**Books recommended.** *Child-Life in Japan*, by Mrs Chaplin-Ayrton. —*Children's Games and Sports*, in Griffis' "Mikado's Empire."—*Hanaware* (Japanese Cards), by the late Major-General Palmer, R E, in Vol XIX. Part III of the "Asiatic Transactions"

**Archæology.** The remains of Japanese antiquity fall naturally into two classes, which it is in most cases easy to distinguish from each other. The first consists of objects connected with that early race of which only a small remnant now exists in the Amos of Yezo, but which at one time probably occupied all the Japanese islands. The second comprises the relics of the immigrants from the neighbouring continent of Asia, whose descendants constitute the bulk of the present Japanese nation.

To the former class belong a variety of objects familiar to us in Europe, as stone implements and weapons. Some of these are peculiar to Japan, though on the whole the resemblance to those found in more Western lands is very striking. Flint celts are perhaps the most common type; and it is curious to note that in Japan, as in the British Isles, the popular imagination has given them the name of "thunder-bolts." Stone clubs, plain or adorned with carvings, have been found in considerable numbers. One of these described by Mr. Kanda measures five feet in length and nearly five inches in diameter, and must have been a truly formidable weapon when wielded by adequate hands. There are also stone swords, pestles, daggers, and a variety of miscellaneous objects, some of unknown use. The material of all these is polished stone. Chipped flints are not unknown, but occur chiefly in the form of arrow or spear-heads for which a high degree of workmanship was less necessary.

An interesting discovery was made in 1878 by Professor Morse near the Ōmori station of the Tōkyō-Yokohama railway. He found that the railway cutting at this place passed

through mounds identical in character with the "kitchen-middens" of Denmark, which have attracted so much attention in Europe. They contained shells in large quantities, fragments of broken bones, implements of stone and horn, and pottery of a special type, which differed from the ancient Japanese earthenware in being hand-made instead of turned on a wheel, and also in shape and ornamentation. Human bones were among those found, and Professor Morse considers the way in which they had been broken to be indicative of cannibalism.\*

We know from history that the ancient Japanese were to some extent pit-dwellers; but no remains of such dwellings are now known to exist. In Yezo, however, and the adjacent islands, large numbers of pits which have been used as human habitations are still to be seen. They are rectangular in shape, measuring about twenty feet by fifteen feet, and having a depth of three or four feet. In these were planted posts, over which a roofing of thatch was placed. They were probably occupied chiefly as winter habitations. Professor Milne thinks that they were made by a race who inhabited Yezo and the northern parts of Japan before the Ainos, and who were driven northwards by the encroachments of the latter. The present inhabitants of the Kurile Islands he believes to be their modern representatives. Both they and the ancestors of the Ainos must have had a low type of civilisation. They had no iron or even copper or bronze implements, and were probably entirely unacquainted with the art of agriculture.

The early history of the continental race which has peopled Japan is wrapped in obscurity. Whence and when they came, and what was the character of their civilisation at the period of their arrival, are questions to which only the vaguest answers can be given. The earliest notices of them, in Chinese literature, date from the first and second centuries of the Christian era.

---

\* These mounds were unfortunately cleared away some years ago.

It would appear that the Japanese were then a much more advanced race than the Ainos ever became. They were agriculturists, not merely hunters and fishers, and were acquainted with the arts of weaving, brewing, and building junks. They had a sovereign who lived in a fortified palace of some architectural pretensions, and their laws and customs are described as strict. The earlier notices speak of their having arrow-heads of bone, but two centuries later iron arrow-heads are mentioned. It is uncertain whether the Japanese brought with them from their continental home the art of working in iron and other metals. It is possible that all the metallurgical knowledge which we find them in possession of at a later period was really derived from China, and in that case there must have been an interval during which they used stone implements; but of this we have no certain knowledge. There is little or no evidence of a bronze age in Japan.

The archæological remains of the ancient Japanese may be taken to date from a few centuries before the Christian era. The most remarkable of these are sepulchral monuments of their sovereigns and grandees, great numbers of which still exist everywhere except in the more northern part of the Main Island. They are most numerous in the Gokinaï, *i.e.*, the five provinces near the ancient capitals of Nara and Kyôto. The plain of Kawachi, in particular, is one vast cemetery dotted over with huge tumuli.

These mounds vary in shape and character. The largest are those known as *misasagi*, the Japanese word for the tombs of Emperors, Empresses, and Princes of the Blood. In the most ancient times, say the Japanese antiquarians, the tombs of the Mikados were simple mounds. At some unknown period, however—perhaps a few centuries before the Christian era—a highly specialised form of tumulus came into use for this purpose, and continued for several hundreds of years without much change. It consists of two mounds—one

conical, and the other of a triangular shape—merging into each other in this form , the whole being surrounded by a moat, and sometimes by two concentric moats with a narrow strip of land between. The interment took place in the conical part, the other probably serving as a platform on which were performed the rites in honour of the deceased. Seen from the side, the appearance is that of a saddle-hill, the conical part being slightly higher than the other. There are sometimes two smaller mounds at the base of the larger ones, filling up the angles where they meet. The slope of the tumulus is not regular, but is broken up by terraces, on which are placed in rows, at intervals of a few inches, curious cylinders coarsely made of baked clay shaped in a mould, and measuring from one to two feet in height and from six to fourteen inches in diameter. They are buried in the earth, their upper rims being just level with the surface. The number of these cylinders is enormous, amounting in the case of some of the larger *misasagi* to many thousands. Their object can scarcely yet be said to have been definitely ascertained. One purpose was no doubt to prevent the earth of the mounds from being washed away by rain; but the Japanese tradition which connects them with an ancient custom of burying alive a number of the retainers of a deceased monarch in a ring round his grave, is probably founded in fact.

It is related that in the 28th year of the Emperor Sunin (B.C. 2 of the popular chronology), his brother died. All his attendants were buried alive round the tumulus in a standing position. For many days they died not, but day and night wept and cried. The Mikado, hearing the sound of their weeping, was sad and sorry in his heart, and commanded all his ministers to devise some plan by which this custom, ancient though it was, should be discontinued for the future. Accordingly, when the Mikado himself died in A.D. 8, workers in clay were sent for to Izumo, who made images

of men, horses, and various other things, which were set up round the grave instead of living beings. This precedent was followed in later times, and some of these figures still exist. The Ueno Museum in Tōkyō contains several specimens, and one (of a man) has been secured for the Gowland collection now in the British Museum. The cylinders above described are similar to these images in material and workmanship, and it is probable that they served as pedestals on which the images were placed, though in view of their immense number, this can hardly have been their only use.

The *misasagi* vary greatly in size. One measured by Sir Ernest Satow in Kōzuke was 36 feet in height, 372 feet long, and 284 feet broad. But this is a comparatively small one. That of the Emperor Ōjin near Nara measures 2,312 yards round the outer moat, and is some 60 feet in height. The Emperor Nintoku's tomb near Sakai is still larger, and there is a tumulus in Kawachi, known as the *Ō-tsuka*, or "Big Mound," on the flank of which a good-sized village has been built.

The *misasagi* are at present generally clothed with trees, and form a favourite nesting resort for the paddy-bird or white egret, and other birds. Of late years these interesting relics have been well-cared for by the Government, at least those which are recognised as Imperial tombs. They have been fenced round, and provided with honorary gateways. Embassies are despatched once or twice a year to worship at them. In former times, however, they were much neglected, and there is reason to fear that few have escaped desecration. A road has been run through the *misasagi* of the Emperor Yūryaku, and on other double mounds promising cabbage plantations have been seen growing.

In some, perhaps in most cases, the *misasagi* contains a large vault built of great unhewn stones without mortar. The walls of the vault converge gradually towards the top, which is then roofed in by enormous slabs of stone weighing many

tons each. The entrance was by means of a long, low gallery, roofed with similar stones, and so constructed that its right wall is in a line with the right wall of the vault. During the later period of mound-building, the entrance to this gallery always faced south,—a practice which had its origin in the Chinese notion that the north is the most honourable quarter, and that the deceased should therefore occupy that position in relation to the worshippers. Sarcophagi of stone and pottery have been found in some of the *misasagi*.

Nobles and high officials were buried in simple conical mounds ten or fifteen feet high, containing a vault similar to those above described, but of smaller dimensions. An average specimen of a group of thirty or forty situated near the western shore of Lake Biwa, a few miles north of the town of Ōtsu, measured as follows :—

## CHAMBER.

Length—from 11 feet 8 inches below to 10 feet above.

Breadth—from 6 feet 6 inches below to 4 feet at top.

Height—8 feet 9 inches.

## GALLERY.

Breadth—2 feet 9 inches.

Height—4 feet.

Length—10 feet.

The roof of the chamber consisted in this instance of three large stones.

These tombs sometimes stand singly, but are more commonly found in groups of ten to forty or fifty. The lower slope of a hill, just where it touches the plain, is a favourite position for them. When the earth of these mounds has been washed away, so that the massive blocks of stone which form the roof protrude from the surface, they present a striking resemblance

to the dolmens of Europe, and more especially to those megalithic monuments known in France as *allées couvertes*. The peasantry call them *iwa-ya*, or "rock-houses," and imagine that they were the dwellings of their remote ancestors, or that they were used as refuges from a fiery rain which fell in ancient times. They are little cared for by the Japanese, and in too many cases have been used as quarries for the building materials which they contain. Nearly all have been rifled at some period or other.

During the eighth century of the Christian era, this style of sepulture fell gradually into disuse under the influence of Buddhist ideas. In the eyes of a Buddhist, vast costly structures were not only a burden to the people, but were objectionable as tending to foster false notions of the real value of these mortal frames of ours. Many of the Mikados were earnest devotees of Buddhism. Beginning with Gemmyō Tennō in A.D. 715, a long series of them abdicated the throne in order to spend the remainder of their lives in pious seclusion. In several cases, by their express desire, no *misasagi* were erected over their remains, and some even directed that their bodies should be cremated and the ashes scattered to the winds.

It is remarkable that no inscriptions should be found in connection with the tombs of this period, although the Japanese became acquainted with Chinese writing early in the fifth century, if not sooner. The tombs have, however, yielded a large quantity of objects of antiquarian interest. Among these, pottery perhaps stands first. The clay cylinders, the figures of men and horses, and earthenware sarcophagi have been already noticed; but numerous vases, pots, dishes, and other utensils have also been found. They are usually turned on a wheel; but there is no trace of glaze or colouring, and they are of rather rude workmanship. The ornamentation is simple, consisting of wavy lines round the vessel,—similar to those seen round Egyptian water-bottles at the present day,—

of circular grooves, or of parallel scorings, all made with a wooden comb or pointed stick when the clay was in a wet state. Many have "mat-markings," and the interior of the larger articles is usually adorned with a pattern known as the "Korean wheel." This consists of discs containing a number of concentric circles overlapping one another. They were produced by a wooden stamp one or two inches in diameter, and the object may have been to render the clay less liable to crack in baking. A stamp of this kind is actually used in Korea at the present time. Fragments of pottery with this mark may always be found in the vicinity of a Japanese dolmen. There are vases of a more pretentious character, having groups of rude figures round the upper part, and pedestals pierced with curious triangular openings. These were probably sacrificial vases. The Japanese pottery of this period is identical in shape, patterns, and material with the more ancient earthenware of Korea, from which country there is no doubt that the ceramic art of Japan was derived. Representative examples of it may be seen in the Gowland collection in the British Museum; the Ueno Museum in Tōkyō is rich in fine specimens. Other antiquarian objects of this period are iron swords (straight and one-edged), iron spear-heads, articles of armour often adorned with gold and silver, mirrors of a mixed metal, horse-gear—such as stirrups, bits, etc.—ornaments, among which are thick rings of gold, silver, or bronze, besides glass beads, etc. All these are of good workmanship, and it is probable that some of the articles are of Chinese origin.

The *maga-tama*, or comma-shaped ornaments made of stone, probably belong to a very early period of Japanese history. They formed part, no doubt, of the necklaces of polished stone and clay beads which we know to have been worn by Japanese sovereigns and nobles in ancient times.

**Books recommended.** *Notes on Japanese Archæology*, by H. von Siebold. *The Shell-Heaps of Omori*, by Professor E. Morse, published in

the "Memoirs of the Science Department of the University of Tokio," Vol. I. Pt. I. *Notes on Ancient Stone Implements, etc., of Japan*, by T. Kanda, and *Ancient Sepulchral Mounds in Kōzuke*, by Sir Ernest Satow, in Vol. VIII. Part III. of the "Asiatic Transactions." Aston's annotated translation of the *Nihongi*, published by the Japan Society in 1896, is a mine of information on pre-historic and proto-historic Japan. See also a paper by Romya Hitchcock on *The Ancient Burial Mounds of Japan*, in the Smithsonian Museum Report for 1891, and others by the same. The greatest native archæologist of the old school was Ninagawa, who died a few years ago. Of living archæologists who have formed themselves on European critical methods, the most eminent is Professor Tsuboi.

**Architecture.** The Japanese genius touches perfection in small things. No other nation ever understood half so well how to make a cup, a tray, even a kettle a thing of beauty, how to transform a little knob of ivory into a microcosm of quaint humour, how to express a fugitive thought in half-a-dozen dashes of the pencil. The massive, the spacious, the grand, is less congenial to their mental attitude. Hence they achieve less success in architecture than in the other arts. The prospect of a Japanese city from a height is monotonous. Not a tower, not a dome, not a minaret, nothing aspiring heavenward, save in rare cases a painted pagoda half-hidden amidst the trees which it barely tops,—nothing but long, low lines of thatch and tiles, even the Buddhist temple roofs being but moderately raised above the rest, and even their curves being only quaint and graceful, nowise imposing. It was a true instinct that led Professor Morse to give to his charming monograph on Japanese architecture the title of *Japanese Homes*, the interest of Japanese buildings lying less in the buildings themselves than in the neat domestic ways of their denizens, and in the delightful little bits of ornamentation that meet one at every turn—the elaborate metal fastenings, the carved friezes (*ramma*), the screens both sliding and folding, the curiously ornamental tiles, the dainty gardens with their dwarfed trees. What is true of the dwelling-houses is true of the temples also. Nikkō and Shiba are glorious, not as architecture (in the sense in which we Europeans, the inheritors of the Parthenon, of the Doges' Palace, and of Salisbury Cathedral, understand the word architecture), but

for the elaborate geometrical figures, the bright flowers and birds and fabulous beasts, with which the sculptor and painter of wood has so lavishly adorned them.

The ordinary Japanese house is a light frame-work structure, whose thatched, slungled, or tiled roof, very heavy in proportion, is supported on stones with slightly hollowed tops, resting on the surface of the soil. There is no foundation, as that word is understood by our architects. The house stands *on* the ground, not partly *in* it. Singularity number two: there are no walls—at least no continuous walls. The side of the house, composed at night of wooden sliding doors called *amado*, is stowed away in boxes during the day-time. In summer, everything is thus open to the outside air. In winter, semi-transparent paper slides, called *shōji*, replace the wooden sliding doors during the day-time. The rooms are divided from each other by opaque paper screens, called *fusuma* or *karakami*, which run in grooves at the top and bottom. By taking out these sliding screens, several rooms can be turned into one. The floor of all the living-rooms is covered with thick mats, made of rushes and perfectly fitted together, so as to leave no interstices. As these mats are always of the same size—six feet by three—it is usual to compute the area of a room by the number of its mats. Thus you speak of a six mat room, a ten mat room, etc. In the dwellings of the middle classes, rooms of eight, of six, and of four and a half mats are those oftenest met with. The kitchen and passages are not matted, but have a wooden floor, which is kept brightly polished. But the passages are few in a Japanese house, each room opening as a rule into the others on either side.

When a house has a second storey, this generally covers but a portion of the ground floor. The steps leading up to it resemble a ladder rather than a staircase. The best rooms in a Japanese house are almost invariably at the back, where also is the garden; and they face south, so as to escape the

northern blast in winter and to get the benefit of the breeze in summer, which then always blows from the south. They generally have a recess or alcove, ornamented with a painted or written scroll (*kakemono*) and a vase of flowers. Furniture is conspicuous by its absence. There are no tables, no chairs, no wash-hand-stands, no pianoforte,—none of all those thousand and one things which we cannot do without. The necessity for bedsteads is obviated by quilts, which are brought in at night and laid down wherever may happen to be most convenient. No mahogany dining-table is required in a family where each member is served separately on a little lacquer tray. Cupboards are, for the most part, openings in the wall, screened in by small paper slides—not separate, movable entities. Whatever treasures the family may possess are mostly stowed in an adjacent building, known in the local English dialect as a “godown,” that is, a fire-proof storehouse with walls of mud or clay.<sup>1</sup>

These details will probably suggest a very uncomfortable sum total; and Japanese houses *are* supremely uncomfortable to ninety-nine Europeans out of a hundred. Nothing to sit on, nothing but a brazier to warm oneself by and yet abundant danger of fire, no solidity, no privacy, the deafening clatter twice daily of the opening and shutting of the outer wooden slides, draughts insidiously pouring in through innumerable chinks and crannies, darkness whenever heavy rain makes it necessary to shut up one or more sides of the house,—to these and various other enormities Japanese houses must plead guilty. Two things, chiefly, may be said on the other side. First, these houses are cheap—an essential point in a poor country. Secondly, the people who live in them do not share our European ideas with regard to comfort and discomfort. They do not miss fire-places or stoves, never having realised the possibility of such elaborate arrangements for heating. They do not mind draughts, having

---

\* “Godown” (pronounced *go-down*, not *god-own*) is derived from the Malay word *gádong*, “a warehouse.”

been inured to them from infancy. In fact an elderly diplomat, who, during his sojourn in a Japanese hotel, spent well-nigh his whole time in the vain endeavour to keep doors shut and chinks patched up, used to exclaim to us, "*Mais les Japonais adorent les courants d'air!*" Furthermore, the physicians who have studied Japanese dwelling-houses from the point of view of hygiene, give them a clean bill of health.

Leaving this portion of the subject, which is a matter of taste, not of argument, let us enquire into the origin of Japanese architecture, which is a matter of research. Its origin is two-fold. The Japanese Buddhist temple comes from India, being a modification of the Indian original. The other Japanese styles are of native growth. Shintō temples, Imperial palaces, and commoners' dwelling-houses are alike developments of the simple hut of prehistoric times. Persons interested in archæological research may like to hear what Sir Ernest Satow has to say on the little-known subject of primeval Japanese architecture. He writes as follows\* :—

"Japanese antiquarians tell us that in early times, before carpenter's tools had been invented, the dwellings of the people who inhabited these islands were constructed of young trees with the bark on, fastened together with ropes made of the rush *suge* (*scirpus maritimus*), or perhaps with the tough shoots of wistaria (*fuji*), and thatched with the grass called *kaya*. In modern buildings the uprights of a house stand upon large stones laid on the surface of the earth; but this precaution against decay had not occurred to the ancients, who planted the uprights in holes dug in the ground.

"The ground plan of the hut was oblong, with four corner uprights, and one in the middle of each of the four sides, those in the sides which formed the ends being long enough to support the ridge-pole. Other trees were fastened horizontally from corner

---

\* We quote from a paper entitled *The Shintō Temples of Ise*, printed in Vol. II. of the "Asiatic Transactions."

to corner, one set near the ground, one near the top and one set on the top, the latter of which formed what we call the wall-plates. Two large rafters, whose upper ends crossed each other, were laid from the wall-plates to the heads of the taller uprights. The ridge-pole rested in the fork formed by the upper ends of the rafters crossing each other. Horizontal poles were then laid along each slope of the roof, one pair being fastened close up to the exterior angles of the fork. The rafters were slender poles or bamboos passed over the ridge-pole and fastened down on each end to the wall-plates. Next followed the process of putting on the thatch. In order to keep this in its place two trees were laid along the top, resting in the forks, and across these two trees were placed short logs at equal distances, which, being fastened to the poles in the exterior angle of the forks by ropes passed through the thatch, bound the ridge of the roof firmly together.

“The walls and doors were constructed of rough matting. It is evident that some tool must have been used to cut the trees to the required length, and for this purpose a sharpened stone was probably employed. Such stone implements have been found imbedded in the earth in various parts of Japan in company with stone arrow-heads and clubs. Specimens of the ancient style of building may even yet be seen in remote parts of the country, not perhaps so much in the habitations of the peasantry, as in sheds erected to serve a temporary purpose.

“The architecture of the Shintō temples is derived from the primeval hut, with more or less modification in proportion to the influence of Buddhism in each particular case. Those of the purest style retain the thatched roof, others are covered with the thick shingling called *hiwada-buki*, while others have tiled and even coppered roofs. The projecting ends of the rafters (called *chigi*) have been somewhat lengthened, and carved more or less elaborately. At the

new temple at Kudanzaka<sup>1</sup>, in Yedo, they are shown in the proper position, projecting from the inside of the shingling; but in the majority of cases they merely consist of two pieces of wood in the form of the letter X, which rest on the ridge of the roof like a pack-saddle on a horse's back,—to make use of a Japanese writer's comparison. The logs which kept the two trees laid on the ridge in their place have taken the form of short cylindrical pieces of timber tapering towards each extremity, which have been compared by foreigners to cigars. In Japanese they are called *katsuo-gi*, from their resemblance to the pieces of dried bonito sold under the name of *katsuo-bushi*. The two trees laid along the roof over the thatch are represented by a single beam, called *muna-osae*, or 'roof-presser.' Planking has taken the place of the mats with which the sides of the building were originally closed, and the entrance is closed by a pair of folding doors turning, not on hinges, but on what are, I believe, technically called 'journals.' The primeval hut had no flooring, but we find that the shrine has a wooden floor raised some feet above the ground, which arrangement necessitates a sort of balcony all round, and a flight of steps up to the entrance. The transformation is completed in some cases by the addition of a quantity of ornamental metal-work in brass."

The same authority's account of the palaces of early days is as follows†: "The palace of the Japanese sovereign was a wooden hut, with its pillars planted in the ground, instead of being erected upon broad flat stones as in modern buildings. The whole frame-work, consisting of posts, beams, rafters, door-posts, and window-frames, was tied together with cords made by twisting the long fibrous stems of climbing plants,

---

\* Commonly known as the *Shōkonsha*. See Murray's *Handbook for Japan*, 4th edit., p. 100.

† See an elaborate paper on *Ancient Japanese Rituals*, in Vol. XI. Part II. of the "Asiatic Transactions."

such as *Pueraria thunbergiana* (*kuzu*) and *Wistaria sinensis* (*fuji*). The floor must have been low down, so that the occupants of the building, as they squatted or lay on their mats, were exposed to the stealthy attacks of venomous snakes, which were probably far more numerous in the earliest ages, when the country was for the most part uncultivated, than at the present day... ..There seems some reason to think that the *yuka*, here translated floor, was originally nothing but a couch which ran round the sides of the hut, the rest of the space being simply a mud-floor, and that the size of the couch was gradually increased until it occupied the whole interior. The rafters projected upward beyond the ridge-pole, crossing each other, as is seen in the roofs of modern Shintō temples, whether their architecture be in conformity with early traditions (in which case all the rafters are so crossed) or modified in accordance with more advanced principles of construction, and the crossed rafters retained only as ornaments at the two ends of the ridge. The roof was thatched, and perhaps had a gable at each end, with a hole to allow the smoke of the wood-fire to escape, so that it was possible for birds flying in and perching on the beams overhead, to defile the food, or the fire with which it was cooked."

To this description of Sir Ernest Satow's, it should be added that fences were in use, and that the wooden doors, sometimes fastened by means of hooks, resembled those with which we are familiar in Europe rather than the sliding, screen-like doors of modern Japan. The windows seem to have been mere holes. Rush-matting and rugs consisting of skins were occasionally brought in to sit upon, and we even hear once or twice of "silk rugs" being used for the same purpose by the noble and wealthy.

Since 1870, the Japanese have begun to exchange their own methods of building for what is locally termed "foreign style," doubtless, as a former resident\* has wittily observed,

---

\* Mr. E. G. Holtham, in his *Eight Years in Japan*.

because foreign to all known styles of architecture. This "foreign style" is indeed not one, but multiform. There is the rabbit-warren style, exemplified in the streets at the back of the Ginza in Tōkyō. There is the wooden shanty or bathing-machine style, of which the capital offers a wealth of examples. There is the cruet-stand style, so strikingly exemplified in the Yokohama Custom-House. The Brobdingnagian pigeon-house style is represented here and there both in wood and stone. Its chief feature is having no windows—at least, none to speak of. After all, these things are Japan's misfortune, not her fault. She discovered Europe, architecturally speaking, at the wrong moment. We cannot with any grace blame a nation whom we have ourselves misled. If Japan's contemporary efforts in architecture are worse even than ours, it is chiefly because her people have less money to dispose of. At this very moment of writing, heroic efforts are being made. Tōkyō is being dowered with a set of new public buildings,—law-courts, admiralty, ministerial residences, etc., which, if entirely lacking distinction and originality, are at any rate big. That is always something.

**Books recommended.** *Japanese Homes*, by Prof. E. S. Morse — *Domestic Architecture in Japan*, and *Further Notes on Japanese Architecture*, by Josiah Conder, F.R.I.B.A., printed in the "Transactions of the Royal Institute of British Architects," 1886-7. Both the above authors have illustrated their works profusely, Prof. Morse giving representations, not only of architectural details proper, but of all the fittings and domestic articles of a middle-class Japanese household. Mr. Conder gives drawings of temples and palaces.—*The Feudal Mansions of Yedo*, by T. R. H. McClatchie, in Vol. VII. Part III. of the "Asiatic Transactions." This is a full description of the ancient *yashiki*, or *daimyōs'* residences.—For what the doctors have to say about Japanese houses from a sanitary point of view, see Drs. Seymour and Baelz, in Vol. XVII. Part II., pp. 17-21, of the "Asiatic Transactions."—There are other papers by Messrs McClatchie, Brunton, and Cawley, more or less concerned with Japanese architecture, scattered through the publications of the same society.

**Armour.** Japanese armour might serve as a text for those authors who love to discourse on the unchanging character of the East. Our own Middle Ages witnessed revolutions in the style of armour as complete as any that

have taken place in the Paris fashions during the last three hundred years. In Japan, on the contrary, from the beginning of true feudalism in the twelfth century down to its extinction in 1871, there was scarcely any change. The older specimens are rather the better, rather the more complete; the newer are often rather heavier, owing to the use of a greater number of plates and scales; that is all. It is true that in quite old times Japanese armour was still imperfect. Cloth and the hides of animals seem to have been the materials then employed. But metal armour had already established itself in general use by the eighth century of our era. The weapons, too, then known were the same as a millennium later, with the exception of fire-arms, which began to creep in during the sixteenth century in the wake of intercourse with the early Portuguese adventurers. Those who are interested in the subject, either theoretically or as purchasers of suits of armour brought to them by curio-vendors, will find a full description in the second part of Conder's *History of Japanese Costume*, printed in Vol. IX. Part III. of the "Asiatic Transactions." They can there read to their hearts' content about corselets, taces, greaves, mame-lières, brassarts, and many other deep matters not known to the vulgar.

**Army.** For many centuries—say from A.D. 1200 to 1867—"soldier" and "gentleman" (*samurai*) were convertible terms. The Mikado and his Court, in their sacred retreat at Kyōto, were, it is true, removed by custom from all participation in martial deeds. At the other end of the scale, the peasantry were likewise excluded. But for the intermediate class—the gentry—to fight was not only a duty but a pleasure, in a state of society where the security of feudal possessions depended on the strong arm of the baron himself and of his trusty lieges. This was the order of things down to A.D. 1600. Thenceforward, though peace reigned for two and a

half centuries under the vigorous administration of the Tokugawa Shōguns, all the military forms of an elder day were kept up. They were suddenly shivered into atoms at the beginning of the present Emperor's reign (A.D. 1868). Military advisers were then called in, first from France and then from Germany, the continental system of universal conscription was introduced, uniforms of modern cut replaced the picturesque but cumbersome trappings of the old Japanese knight, and in a word, Japan—possessing, as she has ever done, that warlike spirit which is the foundation of all military excellence—Japan stands forth to-day with an army that would do credit to many a country in Europe. The Japanese soldier's baptism of fire was in the suppression of the Satsuma rebellion in 1877. He won his spurs brilliantly in the China war of 1894-5, compelling the astonished admiration of all foreign experts. Specially thorough and satisfactory was the organization of the commissariat department, which, in so rigorous a climate and so poor a country, bore the brunt of the undertaking. As the ill-led, unfed, and constitutionally unwarlike Chinamen mostly ran away, Japanese pluck scarcely met with full opportunity for showing itself. Nevertheless, the battle of Pingyang on the 15th September, 1894, the subsequent march through Manchuria, and the taking of Port Arthur in November of the same year, are exploits that will not soon be forgotten. The army to a man, and indeed the whole ambitious section of the nation, now pant to measure their strength against some nobler—some European—foe, and doubt not for a single instant that, be it Russia, be it England, or who fate wills, the result shall be to the advantage of their own passionately loved country and Emperor.

The published statistics of the army—even the very latest—are useless, partly because of a recent decision of the authorities to keep precise details of the fighting strength secret, partly because the army is undergoing a process of expansion

which will not be completed until the year 1902. We have, however, reason to believe that when the contemplated changes shall have been effected, the following figures will not be far from the mark:—

Standing forces .....	146,000
Reserve ... ..	190,000
Landwehr.....	248,500
Military Colony in Yezo . . . . .	1,500
Gendarmes .....	2,500
<hr/>	
Total .....	588,500

of whom between 8,000 and 9,000 officers. Exclusive of the Imperial Guard, there will be twelve divisions with headquarters at Tōkyō, Sendai, Nagoya, Ōsaka, Hiroshima, Kumamoto, Sapporo, Hirosaki, Kanazawa, Fukuchiyama, Marugame, and Kokura. Three brigades—say 7,500 men—are detached for service in Formosa. Hitherto the cavalry had been a weak point; but its fifteen squadrons will be raised to sixty-five, say 9,750 men, or 18,000 on a war footing. The programme includes the expenditure of vast sums on the construction of forts, barracks, and arsenals. Quantities of fire-arms, ordnance, and ammunition are manufactured at Tōkyō and Ōsaka. The army is equipped with a peculiar rifle, the invention of a Japanese officer, General Baron Murata. In accordance with European precedents, the Emperor has assumed the supreme command. During the late war, two of the princes, his kinsmen, were in actual command in the field, a duty which would now probably devolve on Prince Komatsu, the present chief of the staff.

The men, as already incidentally noted, are raised by conscription. When the system was first introduced, numerous exceptions were allowed; but now the application of the law is stringent, no excuse other than physical unfitness being entertained. The limit of height is five Japanese feet, that is 4.95 feet English. All males having attained the age of twenty are liable to serve in the standing army for a term of seven years,

of which three must be spent in active service and the rest in the reserve. After passing through the reserve, they form part of the landwehr for another term of five years. Every male from the age of seventeen to forty who is neither in active service, nor in the reserve, nor in the landwehr, belongs *ipso facto* to the landsturm, and is liable to be called out in case of national emergency. The officers are admitted partly by competition, partly after graduation at any of the middle schools.

The new-comer may smile to see two or three Japanese soldiers strolling along hand in hand as if they were Dresden shepherdesses. But for this and for the use of straw sandals on active service instead of boots, their bearing conforms to European models.

It is extraordinary into what minutiae the Government has gone in its determination to foster the military spirit and raise the army to the highest point of perfection. Even books of war-songs have been officially composed and included in the course of instruction. The result, it must be confessed, has not been the production of poems of any very high order of merit. What cannot fail to elicit our admiration is the manner in which the military drill imposed on all government schools has been responded to by the scholars. Even little mites of boys bear the flag stoutly, march miles in the blazing sun, and altogether carry themselves so as to show that an enemy attempting to land on these shores must count, not only with every able-bodied man, but with every child throughout the empire.

**Art.** The beginnings of Japanese art, as of almost all things Japanese excepting cleanliness, can be traced to China through Korea. Even after Japanese art had started on its independent career, it refreshed its inspiration from time to time by a careful study and imitation of Chinese models; and Chinese master-pieces still occupy in the estimate of Japanese connoisseurs a place only hesitatingly allowed to the best native works. Even Chinese subjects preponderate in the classical schools of Japan.

Speaking of the productions of the classical Japanese painters, Dr. Anderson says: "It may safely be asserted that not one in twenty of the productions of these painters, who to the present day are considered to represent the true genius of Japanese art, was inspired by the works of nature as seen in their own beautiful country." Whatever Indian, Persian, or Greek strain may be detected in Japan came through Korea and China in the wake of Buddhism, and is accordingly far less marked—if marked at all—in genuinely native Japanese paintings and carvings than in those archaic remains which, though often inaccurately spoken of as Japanese, were really the handiwork of Korean or Chinese artists or of their immediate pupils.

The most ancient painting now existing in Japan is a Buddhist mural decoration in the temple of Hōryūji near Nara, believed to date from A.D. 607 and to be the work of a Korean priest. For more than two centuries longer, art remained chiefly in Korean and Chinese priestly hands. The first native painter of eminence was Kōse-no-Kanaoka, a court noble who flourished from about A.D. 850 to 880, but scarcely any of whose works remain. That the art of painting, especially on screens, was assiduously cultivated at the Japanese Court during the ninth and tenth centuries, is proved by numerous references in literature. But it was not till about the year 1000 that the *Yamato Ryū* (lit. "Japanese school"), the first concerning which we have much positive knowledge, was established by an artist named Motomitsu. This school contained within itself the seed of most of the peculiarities that have characterised Japanese art ever since, with its neglect of perspective, its impossible mountains, its quaint dissection of roofless interiors, its spirited burlesques of solemn processions, wherein frogs, insects, or hobgoblins take the place of men. In the thirteenth century this school assumed the name of the *Tosa Ryū*, and confined itself thenceforward more and more to classical subjects. Its former humorous strain had been caught as early as the twelfth century by Toba

Sōjō, a rollicking priest, who, about A.D. 1160, distinguished himself by drawings coarse in both senses of the word, but full of verve and drollery. These are the so-called *Toba-e*. Toba Sōjō founded a school. To found a school was *de rigueur* in Old Japan, where originality was so little understood that it was supposed that any eminent man's descendants or pupils, to the twentieth generation, ought to be able to do the same sort of work as their ancestor had done. But none of the jovial abbot's followers are worthy of mention alongside of him.

The fifteenth century witnessed a powerful renaissance of Chinese influence, and was the most glorious period of Japanese painting. It is a strange coincidence that Italian painting should then also have been at its zenith. But it is apparently a coincidence only, there being no fact to warrant us in assuming any influence of the one on the other. The most famous names are those of the Buddhist priests Chō Densu and Jōsetsu. Chō Densu, the Fra Angelico of Japan, restricted himself to religious subjects, while Jōsetsu painted landscapes, figures, flowers, and birds. Both these great artists died early in the century. They were succeeded by Mitsunobu, the best painter of the Tosa School, and by Sesshū, Shūbun, and Kano Masanobu, all of whom were founders of independent schools. The first Kano's son, Kano Motonobu, was more eminent than his father. He handed down the tradition to his own sons and grandsons, and the Kano school continues to be, even at the present day, the chief stronghold of classicism in Japan. By "classicism" we mean partly a peculiar technique, partly an adherence to Chinese methods, models, and subjects, such as portraits of Chinese sages and delineations of Chinese landscapes, which are represented of course not from nature but at second-hand.

The synthetic power, the quiet harmonious colouring, and the free vigorous touch of these Japanese "old masters" have justly excited the admiration of succeeding generations

of their countrymen. But the circle of ideas within which the Sesshūs, the Shūbuns, the Kanos, and the other classical Japanese painters move, is too narrow and peculiar for their productions to be ever likely to gain much hold on the esteem of Europe. European collectors—such men as Gonse, for instance—have been looked down on by certain enthusiasts in Japan for the preference which they evince for Hokusai and the modern popular school (*Ukiyo e Rikyū*) generally. It is very bold of us to venture to express an opinion on such a matter; but we think that the instinct which led Gonse and others to Hokusai led them right,—that Japanese art was itself led to Hokusai by a legitimate and most fortunate process of development, that it was led out of the close atmosphere of academical conventionality into the fresh air of heaven.

To say this is not necessarily to deny to the old masters superiority of another order. Chō Densu manifests a spirituality, Sesshū a genius for idealising Chinese scenes, Kano Tan-yu a power to evoke beauty out of a few chaotic blotches, all these and scores of their followers a certain aristocratic distinction, to which the members of the popular school can lay no claim. Grant the ideals of old Japan, grant Buddhism and Chinese conventions, and you must grant the claims of the worshippers of the old masters. But the world does not grant these things. Chinese history and conventions, even Buddhism itself, lie outside the main current of the world's development, whereas the motives and manner of the popular school appeal to all times and places. Hence, the world being large and Japan being small, and influence on civilisation in general being more important than an isolated perfection incapable of transformation or assimilation, there can be little doubt that the popular school will retain its exceptional place in European favour.

The beginning of the movement may be traced as far back as the end of the sixteenth century in the person of Iwasa

Matahei, originally a pupil of the Tosa school and originator of the droll sketches known as *Ōtsu-e*. But a whole century elapsed before Hishigawa Moronobu began to devote himself to the illustration of books in colours and in popular realistic style. Then, towards the close of the eighteenth century, came Ōkyo, the founder of the style known as the *Shijō Ryū*, from the street in Kyōto where the master resided. Ōkyo made a genuine effort to copy nature, instead of only talking about doing so, as had been the habit of the older schools. His astonishingly correct representations of fowls and fishes, his pupil Sosen's portraiture of monkeys, and other striking triumphs of detail were the result. But none of the members of Ōkyo's school succeeded in disembarassing themselves altogether from the immemorial conventionalities of their nation when combining various details into a larger composition. Their naturalism, however, gave an immense impulse to the popularisation of art. A whole cloud of artisan-artists arose—no longer the representatives of privileged ancient families, but commoners who drew pictures of the life around them to suit the genuine taste of the public of their own time and class. Art was released from its mediæval Chinese swaddling-clothes, and allowed to mix in the society of living men and women. And what a quaint, picturesque society it was—that of the time, say, between 1750 and 1850—the “Old Japan” which all now know and appreciate, because the works of the Artisan School have carried its fame round the world!

The king of the artisan workers was he whom we call Hokusai, though his real original name was Nakajima Tetsujirō, and his pseudonyms were legion. During the course of an unusually long life (1760—1849), this man, whose only possessions were his brush and his palette, poured forth a continuous stream of novel and vigorous creations in the form of illustrations to books and of separate coloured sheets—illustrations and sheets which included, as Dr. Anderson

justly says, "the whole range of Japanese art motives, scenes of history, drama, and novel, incidents in the daily life of his own class, realisations of familiar objects of animal and vegetable life, wonderful suggestions of the scenery of his beloved Yedo and its surroundings, and a hundred other inspirations that would require a volume to describe." Contemporary workers in the art of colour-printing were Toyokuni, Kunisada, Shigenobu, Hiroshige, and others in plenty. Then, in 1853, four years after Hokusai's death, came Commodore Perry, the mere threat of whose cannon shivered the old civilisation of Japan into fragments. Japanese art perished. Kyōsai, who survived till 1889, was its last genuine representative in an uncongenial age. His favourite subjects had a certain grim appropriateness:—they were ghosts and skeletons. Charity compels us to draw a veil over the productions of many so-called painters, which, during the last few years, have encumbered the shop-windows of Tōkyō and disfigured the walls of exhibitions got up in imitation of European usage. They seem to be manufactured by the gross. If not worth much, there are at least plenty of them.

Japanese art is distinguished by directness, facility, and strength of line, a sort of bold dash due probably to the habit of writing and drawing from the elbow, not from the wrist. This, so to say, *calligraphic* quality is what gives a charm to the merest rough Japanese sketch. It has been well remarked that if a Japanese artist's work be carried no further even than the outlines, you will still have something worthy of being hung on your wall or inserted in your album. Japanese art disregards the laws of perspective and of light and shadow. Though sometimes faultlessly accurate in natural details, it scorns to be tied down to such accuracy as to an ever-binding rule. Even in the same picture—say, one of a bird perched on a tree—you may have the bird exact in every detail, the tree a sort of conventional shorthand symbol. Or you may

have a bamboo which is perfection, but part of it blurred by an artificial atmosphere which no meteorological eccentricity could place where the painter has placed it ; or else two sea-coasts one above another—each beautiful and poetical, only how in the world could they have got into such a relative position ? The Japanese artist does not trouble his head about such matters. He is, in his limited way, a poet, not a photographer. Our painters of the impressionist school undertake less to paint actual scenes than to render their own feelings in presence of such scenes. The Japanese artist goes a step further : he paints the feelings evoked by the *memory* of the scenes, the feelings when one is between waking and dreaming. He is altogether an idealist, and this at both ends of the scale, the beautiful and the grotesque. Were he able to work on a large canvas, a very great ideal art might have been the result. But in art, as in literature, his nation seems lacking in the genius, the breadth of view, necessary for making grand combinations. It stops at the small, the pretty, the isolated, the vignette. Hence the admirable adaptability of Japanese art to decorative purposes. In decoration, too, some of its more obvious defects retire into the background. Who would look on the side of a tea-pot for a rigid observance of perspective ? Still less in miniature ivory carvings, such as the *netsukes*, in the ornaments of sword-guards, the bas-reliefs on bronze vases, and the patterns in pieces (and many of them are masterpieces) of embroidery. As decoration for small surfaces, Japanese art has already begun to conquer the world. In the days before Japanese ideas became known to Europe, people there used to consider it essential to have the patterns on plates, cushions, and what not, arranged with geometrical accuracy. If on the right hand there was a cupid looking to the left, then on the left hand there must be a cupid of exactly the same size looking to the right, and the chief feature of the design was invariably in the exact centre. The Japanese artisan-artists have shown us that this mechanical

symmetry does not make for beauty. They have taught us the charm of irregularity ; and if the world owe them but this one lesson, Japan may yet be proud of what she has accomplished.

There exists, it is true, nowadays a small band of foreign enthusiasts, who deny that the art of Japan is thus limited in its scope and decorative rather than representative. Having studied it with greater zeal and profit than they have studied European art, they go so far as to put Japanese art on a level with that of Greece and Italy. These enthusiasts have performed and are still performing a useful function. They are disseminating a knowledge of Japanese art abroad, disseminating it, too, in Japan itself, where it had been suffered to fall into neglect. But their cult of Japanese art partakes of the nature of a religious faith, and like other religionists, they are apt to be deficient in the sense of humour. They are much too much in earnest ever to smile about such serious matters. For instance, one of these apostles of japonism in art informs the public that the late painter Kyōsai "was perhaps the greatest limner of crows that Japan, nay the whole world, has produced." Does this not remind you of the artist in whose epitaph it was recorded that he was "the Raphael of cats?" The Japanese are undoubtedly Raphaels of fishes, and insects, and flowers, and bamboo-stems swaying in the breeze ; and they have given us charming fragments of idealised scenery. But they have never succeeded in adequately transferring to canvas "the human form divine ;" they have never made grand historical scenes live again before the eyes of posterity ; they have never, like the early Italian masters, drawn away men's hearts from earth to heaven in an ecstasy of adoration. In a word, Japanese art, as Mr. Alfred East tersely said, when lecturing on the subject in Tōkyō, is "great in small things, but small in great things." (See also Articles on ARCHITECTURE, CARVING, CLOISONNÉ, METAL-WORK, MUSIC, PORCELAIN, and WOOD ENGRAVING.)

N B—A curious fact, to which we have never seen attention drawn, is that the Japanese language has no genuine native word for "art." To translate the European term "fine art," there has recently been invented the compound *bi-jutsu*, by putting together the two Chinese characters *bi*, "beautiful," and *jutsu*, "craft," "device," "legerdemain;" and there are two or three other such compounds which make an approach to the meaning, but none that satisfactorily cover it. The Japanese language is similarly devoid of any satisfactory word for "nature." The nearest equivalents are *seishitsu*, "characteristic qualities," *bambutsu*, "all things;" *tennen*, "spontaneously." This curious philological fact makes it difficult, with the best will and skill in the world, to reproduce most of our discussions on art and nature in a manner that shall be intelligible to those Japanese who know no European language.

The lack of a proper word for "art" is unquestionably a weakness in Japanese. Perhaps the lack of a word for "nature" is a strength. For does not the word "nature" in our Western tongues serve to conceal, and therefore encourage, confusion of ideas? When we talk, for instance, of being "inspired by nature," what precise sense can be attached to the phrase? Sometimes "nature"—especially with a big N—is a kind of deistic synonym or euphemism for the Creator, who becomes "she" for the nonce. At other times it denotes His creatures. Sometimes it is the universe minus man; sometimes it is man's impulses as opposed to his conscious acts. Sometimes it sums up all that is reasonable and proper, sometimes, as in theological parlance, the exact reverse. The word "nature" is a Proteus. It stands for everything in general and nothing in particular,—impossible to define, and serving only as a will-o'-the-wisp to mislead metaphysically-minded persons.

**Books recommended.** The foregoing article is founded chiefly on Dr. Wm. Anderson's great work, *The Pictorial Arts of Japan*, which, with its companion work, the *Catalogue of Japanese and Chinese Paintings in the British Museum*, is the best authority on the subject. Failing these, see the same author's earlier *History of Japanese Art*, in Vol. VII Part IV. of the "Asiatic Transactions." The other chief book bearing on the subject is *L'Art Japonais*, by A. Gonse. Very important, too, is Professor Fenollosa's *Review of the Chapter on Painting in Gonse*, printed in the "Japan Weekly Mail" of the 12th July, 1884. None who are genuinely interested in Japanese art should fail to get hold of this elaborate critique, wherein is pleaded, with full knowledge of the subject, the cause of the Japanese old masters as against Hokusai and the modern Popular School whom Gonse had championed.—It is not easy to recommend and of the briefer and cheaper books on the subject. Perhaps Huish's handy little volume, entitled *Japan and its Art*, may be mentioned. See also *Artistic Japan*, a now extinct illustrated journal, edited by S Byng, any to be obtained in volume form.

**Asiatic Society of Japan.** This society was founded in 1872 for "the collection of information and the investigation of subjects relating to Japan or other Asiatic countries." The two seats of the Society are Tōkyō and Yokohama. The entrance fee is 5 *yen*, and the yearly fee likewise 5 *yen* to

residents, but 3 *yen* to non-residents. It is also optional to residents to become life-members by paying a lump sum of 50 *yen*; similarly, to non-residents for 30 *yen*. Candidates are elected by the Council of the Society. Persons desirous of membership should, therefore, apply to the Secretary or to some other member of the Council. Members receive the *Transactions of the Asiatic Society of Japan* free, from the date of their election, and have the privilege of purchasing back numbers at half-price. These are the *Asiatic Transactions*, so often referred to in the course of the present work. Scarcely a subject connected with Japan but may be found learnedly discussed in the pages of the *Asiatic Transactions*. The *General Index* appended to Vol. XXIII. is invaluable for reference.

Besides the Asiatic Society, there is in Tōkyō a German Society, entitled *Deutsche Gesellschaft für Natur- und Völkerkunde Ostasiens*, the scope of whose labours is closely similar, and whose valuable *Mittheilungen*, or *German Asiatic Transactions*, as we have ventured to call them when quoting them, are strongly recommended to readers familiar with the German language. This Society was founded in 1873. The *Japan Society*, founded in London in 1892, has published many good papers, especially on subjects connected with art

**Bathing.** Cleanliness is one of the few original items of Japanese civilisation. Almost all other Japanese institutions have their root in China, but not tubs. We read in the Japanese mythology that the god Izanagi, on returning from a visit to his dead wife in Hades, purified himself in the waters of a stream. Ceremonial purifications continue to form part of the Shintō ritual. But viewed generally, the cleanliness in which the Japanese excel the rest of mankind has nothing to do with godliness. They are clean for the personal satisfaction of being clean. Their hot baths—for they almost all bathe in very hot water of about 110° Fahrenheit—also help to keep them warm in winter. For though moderately hot water gives

a chilly reaction, this is not the case when the water is extremely hot, neither is there then any fear of catching cold. There are over eleven hundred public baths in the city of Tōkyō, in which it is calculated that four hundred thousand persons bathe daily, the charge being 1 *sen* 5 *rin* (not quite a halfpenny of English money) for adults, 1 *sen* 3 *rin* for children, and 1 *sen* for infants in arms. In addition to this, every respectable private house has its own bath-room. Other cities and even villages are similarly provided. Generally, but not always, a barrier separates the sexes from each other. Where there are neither bathing establishments nor private bath-rooms, the people take their tubs out-of-doors, unless indeed a policeman, charged with carrying out the modern regulations, happen to be prowling about the neighbourhood; for cleanliness is more esteemed by the Japanese than our artificial Western prudery. As the editor of the *Japan Mail* has well said, the nude is seen in Japan, but is not looked at.

Some Europeans have tried to pick holes in the Japanese system, saying that the bathers put on their dirty clothes when they have dried themselves. True, the Japanese of the old school have nothing so perfect as our system of daily renovated linen. But as the bodies even of the men of the lowest class are constantly washed and scrubbed, it is hardly to be supposed that their garments, though perhaps dusty outside, can be very dirty within. A Japanese crowd is the sweetest in the world. The charm of the Japanese system of hot bathing is proved by the fact that almost all the foreigners resident in the country adopt it. There seems, too, to be something in the climate which renders hot baths healthier than cold. By persisting in the use of cold water one man gets rheumatism, a second gets fever, a third a never-ending continuance of colds and coughs. So nearly all end by coming round to the Japanese plan, the chief foreign contribution to its improvement being the use of a separate bath by each person. In a Japanese family the same bath does for all the members; and as man is

the nobler sex, the gentlemen usually take it first, in the order of their age or dignity, the ladies afterwards, and then the younger children, the servants enjoying it last at a late hour of the evening, if they be not sent to a public bath-house instead. It must be understood that each bather first cleans himself outside the bath by ladling water over his body. Now-a-days soap, too, is much used. The original national cleanser was the bran bag (*nuka-bukuro*), made by sewing a handful of bran into a small piece of linen, which furnishes a deliciously soft washing material. Thus each one enters the bath already clean, to enjoy the luxury of a good boiling.

The national passion for bathing leads all classes to make extensive use of the hot mineral springs in which their volcano-studded land abounds. Sometimes they carry their enjoyment of this simple luxury to an almost incredible extreme. At Kawara-yu, a tiny spa not far from Ikao in the province of Jōshū—one of those places, of which there are many in Japan, which look as if they were at the very end of the world, so steep are the mountains shutting them in on every side—the bathers stay in the water for a month on end, with a stone on their lap to prevent them from floating in their sleep. The care-taker of the establishment, a hale old man of seventy, stays in the bath during the entire winter. To be sure, the water is, in this particular case, one or two degrees below blood-heat. Thus alone is so strange a life rendered possible. In another case, some of the inhabitants of a certain village famed for its hot springs excused themselves to the present writer for their dirtiness during the busy summer months: “For,” said they, “we have only time to bathe twice a day.” “How often, then, do you bathe in winter?” “Oh! about four or five times daily. The children get into the bath whenever they feel cold.”

Sea-bathing was not formerly much practised; but since 1885 the upper classes have taken greatly to it, in imitation of European usage, and the coast is now studded with bathing

establishments under medical supervision. Ōiso, Ushibuse near Numazu, and Dzushi, are the favourite sea-side places of the gentry of Tōkyō.

**Bibliography.** By far the best, for European books on Japan, is Fr. von Wenckstern's *Bibliography of the Japanese Empire*, published by Trübner in 1895, and including a facsimile reprint of Léon Pagès' *Bibliographie Japonaise*, which had appeared a generation earlier. Though not a regular bibliography, Sir Ernest Satow's admirable article on *Japanese Literature* in the "American Cyclopædia" gives the titles of a considerable number of native Japanese books. The *Gunsho Ichiran*, published in 1801, is the standard Japanese authority on the subject; but it is very imperfect, the severely classical tastes of the compiler not having permitted him to take any notice of novels and other popular modern works.

**Birthdays** are not much observed in Japan, except that rice mixed with red beans is eaten on the auspicious day. All the little girls celebrate their yearly holiday on the 3rd March, and the little boys on the 5th May, as explained in the article on CHILDREN. From another point of view, the 1st January may be considered the universal birthday; for the Japanese do not wait till the actual anniversary of birth has come round to call a person a year older, but date the addition to his age from the first day of the year. Thus a child born in December, 1897, will be called two years old in January, 1898, when it is perhaps scarcely a month old in reality. The sixty-first birthday is the only one about which much fuss is made. This is because the old man or woman, having lived through one revolution of the sexagenary cycle, then begins a second round, which is in itself an extraordinary event; for the Japanese reckon youth to last from birth to the age of twenty, middle age from twenty to forty, and old age from forty to sixty. This latter age corresponds to the Psalmist's "three score and ten," as the natural term of human existence.

**Blackening the Teeth.** This ugly custom is at least as old as A.D. 920 ; but the reason for it is unknown. It was finally prohibited in the case of men in the year 1870. A black-toothed woman of the old school may, however, still be seen from time to time even at the present day. Every married woman in the land had her teeth blackened, until the present Empress set the example of discontinuing the practice. Fortunately, the efficacy of the preparation used wears out after a few days, so that the ladies of Japan experienced no difficulty in getting their mouths white again. Mr. A. B. Mitford, in his amusing *Tales of Old Japan*, gives the following recipe for tooth-blackening, as having been supplied to him by a fashionable Yedo druggist :—"Take three pints of water, and, having warmed it, add half a teacupful of wine.\* Put into this mixture a quantity of red-hot iron ; allow it to stand for five or six days, when there will be a scum on the top of the mixture, which should then be poured into a small teacup and placed near a fire. When it is warm, powdered gall-nuts and iron filings should be added to it, and the whole should be warmed again. The liquid is then painted on to the teeth by means of a soft feather brush, with more powdered gall-nuts and iron, and, after several applications, the desired colour will be obtained."

**Books on Japan.** Von Wenckstern's *Bibliography of the Japanese Empire* contains a great many thousands of titles, from which it may be inferred that *not* to have written a book about Japan is fast becoming a title to distinction. The art of Japan, the history of Japan, the language, folk-lore, botany, even the earthquakes and the diseases of Japan—each of these, with many other subjects, has a little library to itself. Then there are the works of an encyclopedic character, and there are the books of travel. Some of the latter possess great value, as photographing Japanese manners for us at certain

---

\* By "wine," must of course be meant Japanese *sake*.

periods. Others are at the ordinary low level of globe-trotting literature—twaddle enlivened by statistics at second-hand.

We give references at the end of most of the articles of this work to the chief authorities on each special subject. At the risk of offending innumerable writers, we now venture to pick out the following dozen works as probably the most generally useful that are accessible to English readers. Of course it is more than possible that some of the really best have escaped our notice or our memory. Anyhow, an imperfect list will perhaps be deemed better than none at all:—

1. Dr. Rein's "JAPAN," with its sequel, "THE INDUSTRIES OF JAPAN."\* Though not perfect,—no encyclopedic work can altogether escape errors in each specialist's domain,—these admirable volumes should be in the hands of every person who desires to study Japan seriously. Of the two, that on the INDUSTRIES is the better:—agriculture, cattle-raising, forestry, mines, lacquer-work, metal-work, commerce, everything, in fact, has been studied with a truly German patience, and is set forth with a truly German thoroughness. The other volume is occupied with the physiography of the country, that is, its geography, fauna, flora, etc., with an account of the people both historical and ethnographical, and with the topography of the various provinces. A new edition of Rein's books, bringing the statistics up to date, would be very welcome.

2. "THE MIKADO'S EMPIRE," by the Rev. W. E. Griffis. This is the book best calculated to give the general reader just what he requires, and to give it to him in a manner less technical than Rein's. The first part is devoted to the history, the second to the author's personal experiences and to Japanese life in modern days. The eighth edition brings the story down to the conclu-

---

\*Though Dr. Rein is a German and his work was first published in the German language, the English edition is to be preferred. For, writes the author in his preface, "the English translation is based on a careful revision of the original, and may be considered a new and improved edition of it."

sion of the China war in 1895. More than one reader of cultivated taste has, indeed, complained of the author's tendency to "gush," and of the occasional tawdriness of his style.\* But these faults are on the surface, and do not touch the genuine value of the book.

3. Lafcadio Hearn's† "GLIMPSES OF UNFAMILIAR JAPAN," together with the succeeding volumes entitled "OUT OF THE EAST" and "KOKORO." Never perhaps was scientific accuracy of detail married to such tender and exquisite brilliancy of style. In reading these profoundly original essays, we feel the truth of Richard Wagner's saying, that "*Alles Verstandniss kommt uns nur durch die Liebe.*" Lafcadio Hearn understands Japan better, and makes us understand it better, than any other writer, because he loves it better. Japanese life, manners, thoughts, aspirations, the student class, the singing-girls, the politicians, the delightful country-folk of secluded hamlets who still bow down before ancestral gods, Japan's attitude during the war, Buddhist funeral services chanted by priestly choirs in vestments gold-embroidered, not men only but ghosts and folk-lore fancies, the scenery of remote islands which Hearn alone among Europeans has ever trod,—not a single thing Japanese, in short, except perhaps the humorous side of native life, but these wonderful books shed on it the blended light of poetry and truth. Our only quarrel is with some of Lafcadio Hearn's judgments:—in righting the Japanese, he seems to us continually to wrong his own race. The objectionable character in his stories is too apt to be a European. However, Europe is well-able to take care of herself; and if this be the price demanded

---

\* Thus the nose is spoken of as the "nasal ornament;" a volcano in a state of eruption is said to "ulcer its crater jaws;" laughing is called an "explosion of risibilities," etc., etc.

† Mr. Hearn's nationality having been sometimes questioned, we may mention that, a year or two ago, he became a Japanese, assuming the new name of Koizumi Yakumo. Up till that time he had been a British subject, having been born in Corfu. Before settling in Japan in 1890, he had resided for many years in the United States, where his works have always been published.

for so great a gift to literature and ethnologic science, we at least will pay it uncomplainingly.

4. "JAPANESE GIRLS AND WOMEN," by Miss A. M. Bacon. This modest volume and its sequel, *A Japanese Interior*, give in a short compass the best account that has yet been published of Japanese family life,—a sanctum into which all travellers would fain pry, but of which even most old residents know surprisingly little. The sobriety of Miss Bacon's judgments and the simplicity of her style contrast almost piquantly with Lafcadio Hearn's tropical luxuriance.

5. "THE SOUL OF THE FAR-EAST," by Percival Lowell. With a dazzling array of metaphysical epigrams, this distinguished Bostonian attacks the inner nature of the Japanese soul, whose hall-mark he discovers in "impersonality." Nothing on earth—or elsewhere—being too profound for an intellect so truly meteor-like in its brilliancy, Lowell, in his later work, *Occult Japan*, discovers to us Japanese possession, exorcism, and miracle-working, whose very existence had scarcely been suspected.

6. "JAPAN AS IT WAS AND IS," by Richard Hildreth, an excellent book in which the gist of what the various early travellers have left us concerning Japan is woven together into one continuous narrative, the exact text of the originals being adhered to as much as possible.

7. The "TRANSACTIONS OF THE ASIATIC SOCIETY OF JAPAN." Almost every subject interesting to the student of Japanese matters is treated of in the pages of these TRANSACTIONS, which have, for a quarter of a century past, been the favourite vehicle of publication for the researches of Satow, Aston, Blakiston, Pryer, Geerts, Batchelor, Troup, Wigmore, and other eminent scholars and specialists. Of course the ASIATIC TRANSACTIONS are not light reading. They appeal rather to the serious student, who will have nearly all that he requires if he joins to a perusal of them that of Rein's work; for the ASIATIC

TRANSACTIONS are strongest exactly where Rein is weakest, namely, in questions of literature and history. Thus the two supplement each other.

8. "YOUNG JAPAN," by J. R. Black. Mr Black was one of the earliest foreign residents of Yokohama, and editor of various newspapers both in English and in Japanese. His book is, so to say, the diary of the foreign settlement at Yokohama from 1858 to 1879, that is, during the two most eventful decades of modern Japanese history. It records events and impressions, not indeed with any great literary skill, but with that particular vividness which contemporary memoirs, jotted down from day to day, as the events they describe are unfolding themselves, can alone possess. A perusal of *YOUNG JAPAN* will help fair-minded persons to rate at their true value many of the generalisations of authors of a later time or who have written at a distance.

9. "THE CAPITAL OF THE TYCOON," by Sir Rutherford Alcock. Though published more than thirty years ago, and though, as a narrative, it covers only the brief space of three years (1859-1862), this book is still delightful and profitable reading. In its pages we live with the fathers of the men who rule Japan to-day. True, these men may reject the application to their case of the proverb which says "like father, like son." But we foreign lookers-on, who perhaps after all see something of the game, must be permitted to hold a different opinion, and to believe that even in cases so exceptional as Japan's, the political and social questions of a country can only then be fairly comprehended when its past is constantly borne in mind. Sir Rutherford's book combines the light touch of the skilled diplomat and man of the world with the careful research of the genuine student.

10. "TALES OF OLD JAPAN," by A. B. Mitford. Love, revenge, the "happy despatch," adventure by land and sea, quaint fairy-tales, Buddhist sermons quaintest still—in a word,

the whole picturesque life of Old Japan—these are the things which Mr. Mitford gives us; and he gives them in a style that renders them doubly attractive.

11. "UNBEATEN TRACKS IN JAPAN," by Miss Bird (Mrs. Bishop). Though now nearly two decades old, this remains, to our thinking, the best English book of Japanese travel. The account of the Ainos in the second volume is specially valuable. Japan, however, has not yet found its Abbé Huc. *The* book of Japanese travel, the companion work to Huc's ever-delightful *Empire Chinois*, yet remains to be written,—the book that shall tell us all about the beaten, because most interesting, tracks, and tell it not only with the discrimination of a born observer, but with the authority of an old resident, such as the good Abbé was.

12. "DESCRIPTIVE AND HISTORICAL CATALOGUE OF JAPANESE AND CHINESE PAINTINGS IN THE BRITISH MUSEUM," by Wm. Anderson. Such a title does injustice to what is really an original and valuable book. Who would think of spending \$13 on a catalogue? But this so-called catalogue is really a mine of information on numberless Japanese matters. To begin with, it gives a complete history of Japanese pictorial art. Then the author's painstaking research, with the assistance of Sir Ernest Satow, into the "motives" of this art—drawn, as they are, from the history of the country, from its religions, its superstitions, its literature, its famous sites—has shed a flood of light on these and many kindred subjects. Not that the book is easy reading, or meant to be read at all continuously. Still, the store of anecdotes which it contains will interest every person, who, when confronted by a Japanese picture or other *objet d'art*, prefers knowing what it is about to gaping at it ignorantly.

Where one has hundreds of books to choose from, such a list as the above might of course be indefinitely extended. Pearson's *Flights Inside and Outside Paradise* starts to our recollection

at once as the book of all others to help to while away a rainy day at a tea-house. Miss Seidmore's *Jinikisha Days in Japan* will be found a genial companion, as also will *Notes in Japan* by the charming artist, Alfred Parsons. Dening's *Life of Hideyoshi* and *Japan in Days of Yore* give us refreshing peeps into a state of society less prosaic than our own. Knapp's *Feudal and Modern Japan* is bright and sympathetic. Inouye's *Sketches of Tōkyō Life* brim over with interest, while the various illustrated booklets printed on crêpe paper at Hasegawa's press form pretty souvenirs. Then, too, come the books in foreign languages,—such, for instance, as Aimé Humbert's *Le Japon et les Japonais*, and Bousquet's excellent *Le Japon de nos Jours*. For Pierre Loti's books the resident community has less respect than the public at home:—his inaccuracy and superficiality go against the grain. Nevertheless, the illustrations to his *Madame Chrysanthème* are very pretty, and the letter-press is worth skimming through, though the volume can in nowise be recommended either to misses or to missionaries. What has struck us as the liveliest and best of all popular books on Japan is in German. We mean Netto's *Papierschnettlinge aus Japan*, with its delightful illustrations and its epigrammatic text. With more serious works, too, the Germans are naturally to the front. The *Mittheilungen* of the German Asiatic Society (*Deutsche Gesellschaft für Natur- und Volkenkunde Ostasiens*) are a mine of information on matters scientific, legal, &c , &c.

Not content with the reality of Japan as it is or as it was, some imaginative writers have founded novels on Japanese subjects. We thus have books such as *Arimas*, which is whimsical and clever, and a dozen others that somehow we have never been able to make up our mind to dip into. As for books of travel, there is literally no end to the making of them. Almost every possible space of time, from *Seven Weeks in Japan* to *Eight Years in Japan* and *Nine Years in Nipon*, has furnished the title for a volume. So have almost all the more piquant

adjectives with the word "Japan" attached, as *The Real Japan*, *Heroic Japan*, *Agitated Japan*, *Le Japon Pittoresque*, *Le Japon Pratique*, etc., etc. There are *Expeditions to Japan*, *Sketches of Japan*, *Runs in Japan*, *Gleanings from Japan*, *Life in Japan*, *Short Leave to Japan*, *Japan as we Saw it*, *Lotos-time in Japan*, *Journeys*, *Travels*, *Trips*, *Excursions*, *Impressions*, *Letters*, etc., etc., almost *ad infinitum*. One of the newest and most readable is Weston's *Japanese Alps*, a detailed account of climbs among the little-known peaks of the provinces of Etchū, Hida, and Shinano. Many excellent things, on the other hand, may be unearthed from the files of old newspapers. See, for instance, Rudyard Kipling's *Letters to the "Times," 1892*, which are the most graphic ever penned by a globe-trotter,—but then *what a globe-trotter!* Many general books of travel have chapters devoted to Japan. The liveliest is Miss Duncan's *Social Departure*. For though the author revels in Japan as "a many-tinted fairy-tale," the sense of humour which never deserts her prevents her enthusiasm from degenerating into mawkishness. Perhaps the most entertaining specimen of globe-trotting literature of another calibre is that much older book, Miss Margaretha Weppner's *North Star and Southern Cross*. We do not wish to make any statement which cannot be verified, and therefore we will *not* say that the author is as mad as a March hare; but the book is as funny as if it had been written by a March hare. Her *idée fixe* seems to have been that every foreign man in Yokohama and "Jeddo" meditated an assault on her. As for the Japanese, she dismisses them as "disgusting creatures."\*

---

\* Here is a portion of this authoress's description of Yokohama and its foreign residents:—

"It will be well understood that the life of the European in Japan is, after all, a wretched one. The senses and the animal appetite are abundantly provided for; but the mind, the heart, and the soul are left totally destitute. There are clubs, it is true, but at the time of my stay in Yokohama, they were mere gastronomical resorts. The pure-minded men of the island live at home, where they can enjoy just as much comfort as in the clubs, and are rarely seen in them, except when

More edifying, if less amusing, than such works are the various monographs on special subjects, particularly those on art. Such are Gonse's *L'Art Japonais*, Audsley and Bowes' various publications on *Keramic Art*, *Seals*, and *Enamels*, Franks' and Dresser's books, and above all, Anderson's *Pictorial Arts of Japan*, which is a magnificent work, conceived in a critical spirit, written with competent knowledge, and beautifully illustrated. Conder's *Flowers of Japan* and *Japanese Gardens*, Piggott's *Music and Musical Instruments of Japan*, and Leech's *Butterflies from Japan*, may be confidently recommended as the best treatises on their respective subjects. Gubbins has translated the Japanese Civil Code, making his translation doubly useful by printing the original opposite to it on the same page. *Japans Volkswirtschaft und Statshaushalt*, by K. Rathgen, ranks as the standard authority on Japanese financial and economic questions. Morse's *Japanese Homes* is a fascinating account, not only of Japanese architecture, but of every detail of Japanese domestic life, even down to the water-bucket and the kitchen tongs. The only drawback is the author's *parti pris* of viewing everything through rose-coloured spectacles, which makes those who would fain be instructed feel that they are listening to a special pleader rather than to a judge. Ogawa's albums of collotypes of Japanese life and scenery and flowers will delight every lover of the beautiful.

---

dramatic companies, comedians, whistlers, or such people visit this land. A few of the better Europeans visit the club to kill time.

"I had occasion to remark during my stay in Yokohama that the perennial monotony of the place, and the sensual life led there, have reduced many of them to a state bordering on imbecility. It was difficult to believe that the drivelling trash which they talked could have its origin in the head at all. The eyes of such men are dull, and they have a kind of idiotic stare. They see and hear only what directly attracts the stomach and senses. It is useless moralising further on this subject; but I cannot refrain from adding that the impression produced upon a healthy mind by this portentous abasement is very disheartening. Often when contemplating the superb scenery among which these depraved creatures live, I have involuntarily exclaimed in the words of the poet

'Though every prospect pleases,  
And only man is vile.'"

Among books of reference, may be mentioned the collection of *Treaties and Conventions* concluded between the Japanese and various foreign governments; Bramsen's *Chronological Tables*, by which the exact equivalent of any Japanese date can be ascertained; the *China Sea Directory*, Vol. IV.; the various *Memoirs of the Imperial University*; the late Mr. Geerts's book entitled *Les Produits de la Nature Japonaise et Chinoise*; the British Consular *Trade Reports*, the *Résumé Statistique de l'Empire du Japon*, issued yearly; and the annual reports of the various departments of the Imperial Government on such matters as education, railways, posts, etc., etc. We advert to these last, because not a few of them appear in English as well as in the vernacular. Several Japanese educated abroad have written books in European languages. Such—to mention but three—are Nitobe's interesting monograph on *The Intercourse between the United States and Japan*, Inagaki's *Japan and the Pacific*, and Bunyiu Nanjio's *Catalogue of the Buddhist Tripitaka*. Of works by early travellers, the copious *Letters of the Jesuit Missionaries*, the *Letters of the English Pilot Will Adams*, Kaempfer's *History of Japan*, and the elder Siebold's encyclopedic productions are the chief. But these are now mostly out of print, besides being out of date.

**Botany.** We have not the necessary space, even had we the necessary ability, to enter into a particular description of that rich and wonderful Japanese flora, which excites the imagination of the man of science as much as ever Japanese works of art in porcelain, bronze, and lacquer excited the imagination of the man of taste. We can only draw attention to a few striking facts and theoretical considerations, referring the reader for all details to Dr. Rein's masterly *résumé* of the subject, and to the works of Maximowicz, Savatier, Asa Gray, Sir Joseph Hooker, Itô Keisuke, and the other specialists whom Rein quotes.

The first impression made on any fairly observant person landing in Japan is the extraordinary variety of the vegetation. He sees the pine of the north flourishing by the side of the

tropical bamboo. A rice-field, as in India, stretches to his right; to his left will be a wheat or barley-field, reminding him of Europe; or else he is overshadowed by some giant camphor-laurel, the like of which grows only in Formosa. The same strange juxtapositions occur wherever he travels throughout the archipelago. No wonder that the number of known species of trees and plants (exclusive of mosses and other low organisms) attains to the enormous figure of two thousand seven hundred and forty-three, distributed over an unusually large number of genera, while it is almost certain that further investigations will raise the figure considerably, the northern portion of the country having been as yet but imperfectly explored. Of forest-trees alone, Japan—or, to be strictly accurate, the Japanese region, which includes also Korea, Manchuria, and a portion of Northern China—has a hundred and sixty-eight species divided among sixty-six genera, as against the eighty-five species in thirty-three genera of Europe. The Atlantic forest region of North America is nearly as rich as Japan, having a hundred and fifty-five species in sixty-six genera. The Pacific forest region of North America is poorer even than Europe, having but seventy-eight species in thirty-one genera. A further very curious fact is that Eastern America and Japan possess sixty-five genera in common. Evidently there must be some powerful underlying cause connecting phenomena apparently so capricious. Rein lays great stress on the similarity of climatic conditions obtaining in Eastern Asia and Eastern America, on the abundant rainfall of Japan, and on the convenient stepping-stones for vegetable immigrants formed by the Kurile Islands, Saghalien, Oki, Iki, the Luchus, and other islands both to the west and south. May we not also accept Mr. Wallace's theory, as propounded in his charming book "Island Life" to the effect that the glacial epoch had great influence in bringing about the present state of things? When the climate of the north temperate regions grew arctic, some of the trees and plants whose habitat was

there must have perished, but others doubtless migrated in a southerly direction, where they could still find sufficient warmth to sustain their existence. In Europe, however, they were stopped—first by the barrier of the Alps, and then by the still more effectual barrier of the Mediterranean. On the Pacific slope of America, they mostly perished owing to the extreme narrowness of their habitat, which allowed of no free emigration in any direction. The conditions of Eastern America and of Eastern Asia were altogether different. Here were neither mountain ranges nor oceans to obstruct the southward march of the vegetation as it retreated before the ice; and when the ice had disappeared, all the heat-loving forms, safely preserved in the south, were able to return northward again, a considerable remnant of the richer vegetation of an earlier geological age being thus handed down to our own days in these two favoured regions.

A consideration to which little attention has hitherto been paid is the general identity of the Japanese flora with that of the adjacent coast of Asia. It is probable that when Korea shall have been thoroughly explored, not a few species now designated as *japonica* will be found to be really continental forms. It is already known that some of the plants now most common in Japan have been introduced in historical times through human agency. Such are, to name but two, the tea-plant and the orange-tree. The introduction of the latter is mentioned by the Japanese poets of the eighth century. The tea-plant came in with Buddhism. We were ourselves, we believe, the first to point out, some sixteen years ago, the help which philology may give to natural science in this field, by proving that plants and also animals now inhabiting Japan, but originally imported from China or Korea, may often be detected in the Japanese language by their slightly disfigured Chinese or Korean name.\*

---

\* See the "Asiatic Transactions," Vol. X. Supplement, p. lxx of *Introduction to the Kojiki*.

What we have for shortness' sake termed the Japanese region, is named by Rein "the north-eastern monsoon region," and is furthermore described by him as the "kingdom of magnolias, camellias, and aralias." It coincides very nearly in latitude with the region of the Mediterranean; but the character of the two is as different as can well be imagined. The Japanese region is the delight of the botanist. The Mediterranean region, with its severer forms and more sparing growth, better pleases the artist, who loves vegetation less for its own sake than as a setting for the works of man.

**Books recommended.** Rein's *Japan*, pp. 135-174, is the best for the general reader. See also Yatabe's *Iconographia Floræ Japonicæ*, Savatier's *Enumeratio Plantarum* and the same investigator's *Botanique Japonaise*.—Maximowicz, Miquel, and others have written valuable monographs. The patriarch of Japanese botanists is Itō Keisuke, who began publishing as long ago as 1828.

**Bronze.** See METAL-WORK.

**Buddhism.** Many writers, from St. Francis Xavier downwards, have drawn attention to the superficial resemblances between the Buddhistic and the Roman Catholic ceremonial—the flowers on the altar, the candles, the incense, the shaven heads of the priests, the rosaries, the images, the processions. In point of dogma, a whole world of thought separates Buddhism from every form of Christianity. Knowledge, enlightenment, is the condition of Buddhistic grace—not faith. Self-perfectionment is the means of salvation, not the vicarious sufferings of a Redeemer. Not eternal life is the end, and active participation in unceasing prayer and praise, but absorption into Nirvāna (Jap. *Nehan*), practical annihilation. For Buddhism teaches that existence is itself an evil, springing from the double root of ignorance and the passions. In logical conformity with this tenet, it ignores the existence of a supreme God and Creator of worlds. There are, it is true, gods in the cosmogony which Buddhism inherited from Brahminism; but they are less important than the *Hotoke*, or Buddhas—men, that is, who have

toiled upward through successive stages of existence to the calm of perfect holiness.

These few remarks are designed merely to point the reader along the true path of enquiry. It does not, of course, fall within the scope of a manual devoted to things Japanese to analyse the doctrines and practice of the great and complicated Indian religion, which, commencing with the birth of the Buddha Shaka Muni in the year B.C. 1027 (so say the Chinese and Japanese Buddhists, but European scholars prefer the date B.C. 658), gradually became the main factor in the religious life of all Eastern Asia.

Japan received Buddhism from Korea, whither it had spread from China. The account which the native history books give of the introduction of Buddhism into Japan, is that a golden image of Buddha and some scrolls of the Sûtras were presented to the Mikado Kimmei by the King of Hyakusai, one of the Korean states, in A.D. 552. The Mikado inclined to the acceptance of the new religion; but the majority of his council, conservative Shintoists, persuaded him to reject the image from his court. The golden Buddha was accordingly conferred upon one Soga-no-Iname, who turned his country-house into the first Buddhist temple existing on the soil of Japan. A pestilence which shortly broke out was attributed by the partisans of the old religion to this foreign innovation. The temple was razed to the ground; but such dire calamities followed on this act of sacrilege that it was soon allowed to be rebuilt. Buddhist monks and nuns then flocked over from Korea in ever-increasing numbers. Shôtoku Taishi, who was prince regent under the Empress Suiko from A.D. 593 to A.D. 621, himself attained almost to the rank of Buddhist saintship; and from that time forward the new religion became established as the chief religion of the land, though Shintô was never entirely suppressed. All education was for centuries in Buddhist hands, Buddhism introduced art, introduced medicine, moulded the folk-lore of

the country, created its dramatic poetry, deeply influenced politics and every sphere of social and intellectual activity. In a word, Buddhism was the teacher under whose instruction the Japanese nation grew up. As a nation, they are now grossly forgetful of this fact. Ask an educated Japanese a question about Buddhism, and ten to one he will smile in your face. A hundred to one that he knows nothing about the subject, and glories in his nescience.

Chinese and Korean Buddhism was already broken up into numerous sects and sub-sects when it reached Japan—sects, too, all of which had come to differ very widely in their teaching from that of the purer, simpler Southern Buddhism of Ceylon and Siam. Japanese Buddhism follows what is termed the "Great Vehicle" (Sanskrit *Mahāyāna*, Jap. *Daijō*), which contains many unwarranted accretions to the original teaching of the Buddha.\* The most powerful sects now existing in Japan are the Tendai, Shingon, Jōdo, and Zen, which are of Chinese origin, the Shin (also called Ikkō or Monto), and the Nichiren or Hokke, both native Japanese sects dating from the thirteenth century.

The complicated metaphysics of Buddhism have awakened no interest in the Japanese nation. Another fact, curious but true, is that these people have never been at the trouble to translate the Buddhist canon into their own language. The priests use a Chinese version, the laity no version at all nowadays, though—to judge from the allusions scattered up and down Japanese literature—they would seem to have been more given to searching the scriptures a few hundred years ago. The Buddhist religion was disestablished and disendowed during the years 1871-4, a step taken in consequence of the temporary ascendancy of Shintō. At the present time, a faint struggle is

---

\*This view of Southern Buddhism as the purer has the support of most European investigators. It is, however, not endorsed by Mr. Lloyd, quoted below as the first authority on Japanese Buddhism, who not unnaturally follows the lead of his Japanese authorities.

being carried on by the Buddhist priesthood against rivals in comparison with whom Shintō is insignificant : we mean the two great streams of European thought—Christianity and physical science. A few—a very few—men trained in European methods fight for the Buddhist cause. They do so, not as orthodox believers in any existing sect, but because they are convinced that the philosophical contents of Buddhism in general are supported by the doctrine of evolution, and that this religion needs therefore only to be regenerated on modern lines in order to find universal acceptance.

**Books recommended.** *Developments of Japanese Buddhism*, by Rev. A. Lloyd in the "Asiatic Transactions," Vol. XXII. Part III.—*Buddhism*, by Rhys Davids, though published by the Society for Promoting Christian Knowledge, is quite free from Christian prejudice—A brief outline of Japanese Buddhism is given in the latest edition of Murray's *Handbook for Japan*, together with a descriptive list of the most popular gods and goddesses. Students should consult Eitel's invaluable *Sanskrit-Chinese Dictionary*, also entitled *Handbook for Students of Chinese Buddhism*.—The tenets and the devotional literature of the Shin sect have been treated of by James Troup in Vols. XIV. and XVII. of the "Asiatic Transactions"; (the paper in the latter being entitled *The Gobunsho*). The sect curiously illustrates the fact that a religion may, with the lapse of time and by passing from nation to nation, end by becoming almost the exact contrary of what it was at starting. At first sight, one would imagine the Shin sect to be a travesty of Christianity rather than a development of Buddhism—See also an Article by Dr. L. Busse in Part 50 of the "German Asiatic Transactions."

**Camphor.** Japan's new colony of Formosa is the greatest camphor-producing district in the world, and Japan proper does not lag far behind. Camphor is obtained by felling the tree and cutting it into chips, which are steamed in a vat, the vapour being made to carry off the fumes into a cooling apparatus, where condensation takes place and the camphor and camphor oil are afterwards skimmed off. Cabinets made of camphor wood are much esteemed, not only for the fine grain and silky sheen of the wood, but for its efficacy against the attacks of insects.

The camphor laurel ranks among the stateliest of trees, frequently attaining to an enormous height and girth,—thirty, forty, and even fifty feet in circumference. In Japan such a giant tree is often worshipped by the simple country folk, who

hang ropes of straw or paper round it in token of reverence.

**Books recommended.** Rein's *Industries of Japan*, pp 143-150.—*Der Kampfbaum*, by Dr. E. Grasmann, in Part 56 of the "German Asiatic Transactions."

**Capital Cities.** If the Japanese annals may be trusted, Japan has had no less than sixty capitals. This is to be traced to the fact that in ancient days there was a superstitious dread of any place in which a person had died. The sons of a dead man built themselves a new house. Hence, too, the successor of a dead Mikado built himself a new capital. The provinces of Yamato, Yamashiro, Kawachi, and Settsu, which were the home and centre of the early Japanese monarchy, are dotted with places, now mere villages, sometimes indeed empty names, but once holding the proud position of capitals of the Empire.

In process of time, such perpetual changes proving incompatible with the needs of the more advanced civilisation introduced from China and Korea, a tendency to keep the court settled in one place began to make itself felt. Nara in Yamato remained the capital for seven reigns, between A.D. 709 and 784. After further wanderings, the court fixed itself at Kyōto in 794; and this city continued, with few interruptions, to be the residence of successive generations of Mikados till the year 1868, when it was abandoned in favour of Yedo (Tōkyō), which had been the capital of the Shōguns ever since the year 1590. Kyōto, however, still nominally retains the rank of a metropolis, as is indicated by its new name of *Sai-kyō* or "western capital," in contradistinction to *Tōkyō*, the "eastern capital." The new name, though little known to foreigners, is in general use among the Japanese themselves.

The chief sights in and near Kyōto are the Mikado's palaces, the temples named Nishi Hongwanji, Ohion-in, Kiyomizu-dera, Gion, Ginkakuji, Kinkakuji, Higashi Hongwanji, San-jū-san-gen-dō, and Inari-no-Jinja, Mount Hiei-zan, Lake Biwa, Arashi-yama famous for its cherry-blossoms in spring, and the rapids of the Katsura-gawa. Brocades and embroidery generally are the pro-

ducts for which Kyōto is chiefly noted. In the second rank come pottery, porcelain, cloisonné, and bronze.

Nara, whose charms have been sung by many a Japanese poet from the eighth century onwards, is distinguished by the almost English appearance of the park which surrounds the ancient Shintō temple of Kasuga, where tame deer crowd around the visitor to feed out of his hand. In Nara, likewise, stands the great Buddhist temple of Tōdaiji, with the colossal bronze image known as the *Daibutsu*, or "Great Buddha," dating from A.D. 749.

Another of the old capitals, Kamakura, is distant only a few miles from Yokohama. It was never inhabited by the Mikados. It was the seat of the Shōguns from 1189 onwards, and of the so-called Regents of the Hōjō family during the troublous Middle Ages. Kamakura, taken by storm and burnt to the ground in 1455 and again in 1526, gradually lost its importance. Woods and rice-fields now stretch over the area that once afforded a home to more than a million inhabitants, and little remains to tell of its ancient splendour, save the great temple of Hachiman and the magnificent bronze image of Buddha, perhaps the grandest of all Japanese works of art. (See also Article on Tōkyō.)

**Carving.** The earliest specimens of Japanese carving—if we may so call objects more probably moulded by the hand—are the rude clay figures of men and horses occasionally found in the tumuli of Central and Eastern Japan (see Article on ARCHAEOLOGY). But the art made no progress till the advent of Buddhism in the sixth century. A stone image of the god Miroku was among the earliest gifts of the Court of Korea to that of Japan. Wooden images came also. The Japanese themselves soon learnt to carve in both materials. The huge figure of Jizō, hewn in relief on a block of andesite on the way between Ashinoyu and Hakone, is a grand example. Like so many other celebrated Japanese works of unknown antiquity, it is referred by popular tradition to the Buddhist saint, Kōbō Daishi (ninth

century), who is fabled to have finished it in a single night. The art of wood-carving has always been chiefly in Buddhist hands. Among the finest specimens may be mentioned two sets of "temple guardians" (*Niō*) at Nara, —one by a Korean artist of the beginning of the seventh century, the other by Kwaikēi, a native sculptor who flourished about A.D. 1095—and the charming painted carvings of flowers and birds in the Nikkō temples and in those at Shiba and Uyeno in Tōkyō, dating from the seventeenth and eighteenth centuries.

The Japanese sculptors have rarely attempted portraiture. The seated figure of Ieyasu in the temple of Tōshōgū at Shiba is a good example. But in sculpture, even more than in pictorial art, the strength of the Japanese talent lies rather in decoration and in small things than in representation and in great things. The *netsukes*—a kind of ornament for the tobacco-pouch, carved out of wood or ivory—are often marvels of minuteness, and alive with a keen sense of humour and the grotesque. The Japanese weakness in sculpture is no mere accident. It results from a whole mental attitude, from the habit of looking at nature rather than at man,—a habit itself rooted in that impersonality on which Mr. Percival Lowell has laid so much stress as a Far-Eastern characteristic.

Japan's most famous sculptor was Hidari Jingorō, born in A.D. 1594. The two elephants and the sleeping cat in the mortuary chapel of Ieyasu at Nikkō are among the best known productions of his chisel. He died in 1634, leaving a flourishing school and a reputation around which legend soon began to busy itself. A horse which he had carved as an *ex-voto* used, it is averred, to leave its wooden tablet at night, and go down to the meadow to graze. On one occasion the artist, having seen a frail beauty in the street, became so enamoured that on getting home he set about carving her statue: and between the folds of the statue's robe he placed a mirror, which the girl had let drop and which he had picked up. Thereupon the statue, Galatea-like, came to life,

and the two lovers made supremely happy. Now for the characteristically Japanese turn given to the tale. The times were stormy, and it fell out that the life of the daughter of the artist's lord had to be sacrificed. The artist instantly cut off this living statue's head and sent it to the enemy, who were taken in by the ruse which his loyalty had prompted. But a servant of his lord's, also deceived, and believing that Hidari Jingorō had really killed their lord's daughter, took his sword and cut off the sculptor's right hand. Hence the name of Hidari Jingorō, that is, "left-handed Jingorō." Probably Jingorō's left-handedness, which undoubtedly gave him his nickname of *Hidari*, also suggested the legend.

**Books recommended** Huish's *Japan and its Art*, Chap. XIII.—*The Art Carvings of Japan*, by G. A. Audsley and M. Tomkinson.

**Cats.** As one of the first questions asked by every observant traveller landing at Yokohama refers to the tailless or more properly short-tailed Japanese cats, let it be known that the peculiarity is a natural one. The bones are all there, but not normally developed; hence the atrophied appearance of the tail. It is true, however, that the habit of seeing only tailless cats has engendered such a prejudice in their favour that, should a litter chance to be born with one long-tailed kitten, somebody will generally take upon himself to chop the tail off to a respectable shortness. The popular objection to long-tailed cats has doubtless been augmented by the snake-like aspect of a normal cat's tail when waved from side to side, and by the superstition that there exist cats furnished with one or several long tails, and possessing the power of bewitching human beings after the manner of foxes and badgers (see Article on DEMONIAICAL POSSESSION). Note, however, that the objection to long-tailed cats does not prevail throughout the country. It is confined to certain provinces.

Among Europeans an irreverent person may sometimes be heard to describe an ugly, cross old woman as a cat. In Japan

the land of topsy-turvydom, that nickname is colloquially applied to the youngest and most attractive,—the singing-girls. The reason is that singing-girls bewitch men with their artful, sham coy ways, like the magic cats alluded to above. For a similar reason, fair women one degree lower still in the scale are called foxes, while the male buffoons or jesters, whose talents help to make the fun fast and furious at a spree, are termed badgers.

**Characteristics.** See JAPANESE PEOPLE.

**Chauvinism.** Japan has not escaped, in these latter days, the wave of “jingo” feeling that has swept round the world, making the smaller nationalities self-assertive and threatening the greater with disruption. For a few years, no doubt, “foreign” and “good” were synonymous terms; the Japanese sat at the feet of the Western Gamaliel, and treasured his slightest utterances as pearls of great price. This state of things passed away suddenly in 1887. The feeling now is, “Japan for the Japanese, and let it be a Japanese Japan.” Foreign employéés have been dismissed, and replaced by natives. In the Diet,—it was in the Upper House, too—the metrical system of weights and measures has been opposed on the ground that the introduction of a foreign standard would be a blot on the national escutcheon. Only the other day, the Tōkyō Chamber of Commerce resolved that the Roman nomenclature hitherto usual on the silver and copper pieces should be dropped from the new coinage. Not only has the national costume come back again to a considerable extent, and interest in the native sports and the national antiquities been revived:—the peculiar feature of the present situation is that the Japanese are determined to beat us on our own ground, as they have already beaten China in the field. Japan is to engross the trade of the Pacific, to be the leader of Asia in modern warfare and diplomacy, to found colonies, to annex the Philippines and Australia. According to some, she will remodel philosophy; for

Europe is incurably superstitious, Japan essentially reasonable. Mr. Inagaki, a well-known publicist who has lived abroad and even published a book in English, has written essays to demonstrate Japan's special fitness for originating new and important views on international law. Meanwhile, the foreign missionaries are being abandoned as old-fashioned by their quondam converts. The Rev. Mr. Kozaki believes that Japan is the place where "the world-problem of Christianity is..... being gradually solved;" and numbers of leading Japanese Christians hold with the Rev. Mr. Yokoi, another distinguished convert, that Japanese Christianity must develop a superior theology of its own, and that European Christianity will in the future have to look Japan-wards for support. Politicians take the same line, *mutatis mutandis*. They point to the weary secular struggles, the bloody rebellions, through which the West has slowly won its way to constitutional government, whereas in Japan what has there been? A grateful and intelligent people accepting the free gift of self-government from a wise and benevolent Sovereign. Furthermore it has been discovered that courage, patriotism, and loyalty are specifically Japanese virtues, or that—at the least—Japanese courage, Japanese loyalty, and Japanese patriotism glow with an incomparably brighter radiance than the qualities called by those same names in inferior countries,—England, for instance, France, Germany, or America.

*Dai Nihon Banzai!* "Long live Great Japan!" Japan is a young nation—at least a rejuvenated nation—and youth will be self-confident. The greybeards must not wish it otherwise.

**Cherry-Blossom.** The Japanese cherry-tree (*Cerasus pseudo-cerasus*, Lindley) is cultivated, not for its fruit, but for its blossom, which has always been to Japan what the rose is to Western nations. Poets have sung it since the earliest ages, and crowds still pour forth every year, as spring comes round, to the chief places where avenues of it seem to fill the air with

clouds of the most delicate pink. Even patriotism has adopted it, in contradistinction to the plum-blossom, which is believed to be of Chinese origin—not, like the cherry-tree, a true native of Japan. The poet Motoori exclaims:

*Shukishima no*  
*Yamato-gokoro wo*  
*Hito towaba,*  
*Asa-hi ni niou*  
*Yama zakura bana!*

which, being interpreted, signifies “If one should enquire of you concerning the spirit of a true Japanese, point to the wild cherry-blossom shining in the sun.”—Again a Japanese proverb says: “The cherry is first among flowers, as the warrior is first among men.”

The single blossom variety is generally at its best about the 7th April, coming out before the leaves; the clustering double variety follows a little later. The places best worth visiting in Tōkyō are Ueno Park, Shiba Park, the long avenue of Mukōjima, and, in the neighbouring country, Asuka-yama and Koganei. But the most famous spots for cherry-blossom in all Japan are Yoshino amid the mountains of Yamato, and Arashiyama near Kyōto.

The Japanese are fond of preserving cherry-blossoms in salt, and making a kind of tea out of them. The fragrance of this infusion is delicious, but its taste a bitter deception.

**Chess.** Japanese chess (*shōgi*) was introduced from China centuries ago: and though it has diverged to some extent from its prototype, the two games still have a feature in common distinguishing them from all other varieties. It is this. The rank on which the pawns are usually posted is occupied by only two pieces, called *p'ao* by the Chinese, and *hisha* and *kaku* by the Japanese. Also, on either side of the king are two pieces, called *ssū* in the Chinese, and *kin* in the Japanese game. These perform the duty imposed on the *ferz* or *visir* of the Persian

*Shatranj*, which was the equivalent of the modern queen. Therefore, no queen or piece of similar attributes appears in either Chinese or Japanese chess. There are eighty-one squares on the Japanese board, and the game is played with twenty pieces on each side, distinguished, not by shape or colour, but by the ideographs upon them. Though the movements of the pieces resemble in most respects those followed in the Western game, there are ramifications unknown to the latter, introducing elements that would puzzle even a native Morphy to trace the move which cost him a defeat. The most important of these are the employment of the pieces captured from the adversary to strengthen one's own game, and the comparative facility with which the minor pieces can attain to higher rank.

Chess is understood by all classes in Japan. The very coolies at the corners of the streets improvise out of almost anything around them materials with which to play, and thus while away the tedium of waiting for employment. But it is comparatively little patronised by the educated classes, who hold its rival *Go* in much higher estimation.

*Ō* is the king, *keina* the knight, *hisha* the rook, and *kaku* the bishop—or pieces having movements like them. *Fu* is the pawn. The movements of the *yari* also resemble those of the rook, but are confined to the single rank on which it stands. *Gin* (silver) and *kin* (gold) are not found in Western chess. *Gin* moves one square diagonally at a time, also one square forward. If removed from its original position, it can retreat one square diagonally only. The *kin*, besides having similar movements, has also the power of moving one square on each side of itself, but it cannot return diagonally. The *fu* advances one square forward, and captures as it moves. When any piece moves into the adversary's third row, it may become a *kin*, in the same way as queening is effected in our game. This is indicated by turning the piece over. Every piece so promoted

loses its original character, except the *hisha* and *kaku* to which the movements of the *kin* are added. As already indicated, a captured piece may be employed at any time for either attack or defence. To checkmate with the *fu* is a thing vetoed, or at least considered "bad form," in this non-democratic game, neither is stale-mate permissible in Japanese chess. You wait until the adversary makes a move which admits of free action on your part. The object of the game is, as with us, to checkmate the king.

The following is a diagram of the board :—

Yari		Fu				Fu		Yari
Keima	Kaku	Fu				Fu	Hisha	Keima
Gin		Fu				Fu		Gin
Kin		Fu				Fu		Kin
O		Fu				Fu		O
Kin		Fu				Fu		Kin
Gin		Fu				Fu		Gin
Keima	Hisha	Fu				Fu	Kaku	Keima
Yari		Fu				Fu		Yari

**Children.** Japan has been called "a paradise of babies." The babies are indeed generally so good as to help to make it a paradise for adults. They are well-mannered from the cradle, and the boys in particular are perfectly free from that gawky

shyness which makes many English boys, when in company, such afflictions both to others and to themselves. The late Mrs. Chaplin-Ayrton tried to explain the goodness of Japanese children by a reference to the furnitureless condition of Japanese houses. There is nothing, she said, for them to wish to break, nothing for them to be told not to touch. This is ingenious. But may we not more simply attribute the pleasing fact partly to the less robust health of the Japanese, which results in a scantier supply of animal spirits? In any case, children's pretty ways and children's games add much to the picturesque-ness of Japanese life. Nothing perhaps gives the streets a more peculiar aspect than the quaint custom which obtains among the lower classes of strapping the babies on to the backs of their slightly older brothers and sisters, so that the juvenile population seems to consist of a new species of Siamese twins. On the 3rd March every doll-shop in Tōkyō, Kyōto, and the other large cities is gaily decked with what are called *O Hina Sama*—tiny models both of people and of things, the whole Japanese Court in miniature. This is the great yearly holiday of all the little girls. The boys' holiday takes place on the 5th May, when the towns and villages are adorned with gigantic paper carps, floating in the air from poles, after the manner of flags. The idea is that as the carp swims up the river against the current, so will the sturdy boy, overcoming all obstacles, make his way in the world and rise to fame and fortune.

The unpleasant appearance of many Japanese children's heads is simply due to a form of eczema. The form is one by no means unknown in Europe, and is easily curable in a week. But as popular superstition invests these scabby heads with a health-giving influence in later life, no attempt is made to cure them. Probably shaving with dirty razors has something to do with the disease; for it generally ceases when shaving stops, and has noticeably diminished since the foreign custom of

allowing children's hair to grow has begun to gain ground. The Japanese custom is to shave an infant's head on the seventh day after birth, only a tiny tuft on the nape of the neck being left. During the next five or six years, the mother may give rein to her fancy in the matter of shaving her little one's head. Hence the various styles which we see around us. Shaving is left off when a child goes to school, instead of, as among Europeans, generally commencing when he quits it. The Japanese lad's chin does not begin to sport a few hairs for several years later. Japanese infants are not weaned till they are two or three, sometimes not till they are five years old. This is doubtless one cause of the rapid aging of the mothers.

European parents may feel quite at ease about their little ones' chance of health in this country. Medical authorities declare the mortality among children of European race in Japan to be exceptionally low.

### Christianity in Japan. SEE MISSIONS.

**Clans.** This is the usual English translation of the Japanese word *han* (藩), which may also be rendered "daimiate," that is, the territory and people subject to a *Daimyō*, or territorial noble, in feudal Japan. The Japanese clans differed from the Highland clans in the fact that all the members did not claim a common origin or use the same surname. But they were equally bound to their lord by ties of love and implicit obedience, and to each other by a feeling of brotherhood. This feeling has survived the abolition of feudalism in 1871. Ever since that time, the members of the four great clans of Satsuma, Chōshū, Tosa, and Hizen have practically "run" the government of Japan. Her greatest modern statesman, Itō, her best-known minister of foreign affairs, Inoue, and Yamagata, and Yamada, and Aoki are all Chōshū men, while such salient names as the two

Saigō's, Ōyama, Kuroda, Matsukata, Kabayama, and more or less the whole navy, belong to the Satsuma clan.

The student of Japanese politics who will bear this fact in mind, will find many things become clear to him which before seemed complicated and illogical. Political questions are not necessarily questions of principle. They may simply be questions of personal or local interest. The present paramount influence of the four clans of Satsuma, Chōshū, Tosa, and Hizen is partly an inheritance from olden times, partly the result of the share which they took in restoring the Mikado to his position as autocrat of the Empire in the revolution of 1868. The two strongest of the four are Satsuma and Chōshū, whence the term *Sat-Chō*, used to denote their combination; for in Japanese there is no vulgarity in cutting off the tails of words. On the contrary, to do so is considered an elegant imitation of the Chinese style, which is nothing if not terse. The Satsuma men are credited with courage, the Chōshū men with sagacity. The former are soldiers and sailors, men of dash and daring; the latter are diplomats and able administrators.

**Classes of Society.** Modern Japanese society is divided into three classes,—the nobility (*kwazoku*), gentry (*shizoku*, formerly called *samurai*), and common people (*heimin*). The two former combined constitute five per cent., the common people ninety-five per cent., of the entire population. Some have used the word "caste" to denote these divisions; but the term is inappropriate, as there exists no impassable barrier between the different classes, nor yet anything approaching to Indian caste prejudice. The feeling only resembles that to which we are accustomed in England, if indeed it is as strong.

Japanese official regulations tolerate no subterfuges in matters of personal identity. Each citizen is required to nail up over his door a wooden ticket inscribed with his name and quality. Thus: "District of Azabu, Upper Timber Street, No. 8, a Commoner

of the Prefecture of Shizuoka, So-and-So" (the surname followed by the personal name).

See also Article on Era.

**Climate.** The exaggerated estimation in which the climate of Japan is held by many of those who have had no experience of it often prepares a bitter disappointment for visitors, who find a climate far wetter than that of England and subject to greater extremes of temperature. It should be added, on the other hand, that it also has more fine days,\* and that the fine days it has are incomparably finer and more inspiring than the feeble, misty incertitudes that pass for fine weather among the natives of Great Britain.

The best season is the autumn. From the latter part of October to the end of the year, the sky is generally clear and the atmosphere still, while during a portion of that time (November), the forests display glorious tints of red and gold, surpassed only in Canada and the United States. During January, February, and March, snow occasionally falls, but it rarely lies longer than a day or two. The spring is trying, on account of the wet spells and the frequent high winds, which often seriously interfere with the enjoyment of the cherry, wistaria, peony, and other flowers, in which the Japanese take such pride. True, the rain is always pronounced exceptional. Never, it is alleged, was so wet a season known before, properly conducted years admitting of no rain but in June and the first week or two of July—the "rainy season" (*nyūbai*) duly provided for by the old Japanese calendar, in which not natives only, but the foreign residents, exhibit a confidence which would be touching were it not tiresome. Statistics † show, however, that from April on to July inclusive nearly every other day is rainy, while in the

---

\* Tōkyō has 57.82 inches of yearly rainfall, as against 24.76 at Greenwich, but only 139.9 rainy days as against 166.1.

The number of "rainy days" includes all days on which more than a millimetre of rain fell, and also those on which any snow or hail fell. The "days with snow" are those on which snow fell, regardless of the question whether rain also did or did not fall. Few days are uninterruptedly snowy at Tokyo,—perhaps, only two or three in the year.

months flanking them on either side—March and August—an average of more than one day in three is rainy. In September and October the average number of rainy days rises again to about one out of every two. The superstition concerning a special “rainy season” may be due to the trying combination of dark skies with the first heat of the year, making exercise wearisome when not impossible. So penetrating is then the damp that no care can succeed in keeping things from mildew. Boots, books, cigarettes, if put away for a day, appear next morning covered with an incipient forest of whitish, greenish matter. No match-box can be got to strike; envelopes stick together without being wetted; gloves must be kept hermetically sealed in bottles, or they will come out a mass of spots. The second half of July and all August are hotter, but less damp, the rain then falling rather in occasional heavy storms which last from one to three days, and are followed by splendid weather. The heat generally vanishes suddenly about the second week in September, when the rain sets in with renewed energy and continues about a month. Such is the general order of things. But the scientific observations made for twenty years past prove that seasons differ very widely from each other.

One striking peculiarity of the Japanese climate is the constant prevalence of northerly winds in winter and of southerly winds in summer. Rooms facing south are therefore the best all the year round, escaping, as they do, the chill blasts of January and February, and profiting by every summer breeze. Another peculiarity is the lateness of all the seasons, as compared with Europe. The grass, for instance, which dies down during the cold, dry winter months, does not become really fit for tennis-playing before the middle of May. On the other hand, winter is robbed of the gloom of short afternoons by the transparent clearness of the sky down to the end of the year, and even throughout January whenever it is not actually raining or snowing. Travellers are recommended to choose the late

autumn, especially if they intend to content themselves with the beaten tracks of Kyōto, Tōkyō, Miyanoshita, Nikkō, etc., where the Europeanisation of hotels has brought stoves in its train; for stoveless Japanese tea-houses are wofully chilly places. April and May, notwithstanding a greater chance of wet weather, will be better for the wilds. There is then, too, neither cold nor heat to fear. Japanese heat, after all, is not tropical, and many will enjoy travelling throughout the summer months. Mountain climbing must in any case be reserved for that time of year, as the mountains are not "open" at other seasons,—that is to say, the huts on them are deserted, and the native guides mostly refuse to undertake any ascent.

The foregoing description of the Japanese climate applies to the Pacific seaboard of Central Japan, of which Tōkyō is fairly representative. But need we remind the reader that Japan is a large country? The northernmost Kuriles, now Japanese territory, touch Kamchatka. The most southern of the Luchu Isles is scarcely a degree from the tropic of Cancer, to say nothing of newly acquired Formosa. The climate at the extreme points of the empire therefore differs widely from that of temperate Central Japan. Speaking generally, the south-eastern slope of the great central range of the Main Island—the slope facing the Pacific Ocean and washed by the Kuro-shio, or Gulf-Stream of Eastern Asia—has a much more moderate climate than the north-western slope, which faces the Sea of Japan, with Siberia beyond. In Tōkyō, on the Pacific side, what little snow falls melts almost immediately. In the towns near the Sea of Japan it lies three or four feet deep for weeks, and drifts to a depth of fifteen to eighteen feet in the valleys. But the summer in these same towns is, like the Tōkyō summer, oppressively hot. That the Tōkyō rainfall more than doubles that of London has already been stated. But Tōkyō is by no means one of the wettest parts of the country; on the contrary, with the exception of the northern shore of the Inland Sea and the plains of Musashi and

Shinslū, it is among the driest. Many districts show double its rainfall, the Hida-Etchū mountains and the south-east coast of Kishū show treble.

Thunder-storms and sudden showers are rare in Japan, excepting in the mountain districts. Fogs, too, are rare south of Kinkwazan, about  $38^{\circ} 20'$  North. From Kinkwazan right up the eastern coast of the Main Island, all along Eastern Yezo, the Kuriles, and up as far as Behning's Strait, thick fogs prevail during the calm summer months,—fogs which are relieved only by furious storms in autumn, and a wintry sea charged with ice. The average number of typhoons passing over Japan yearly is from four to five, of which Tōkyō receives one or two. The months liable to typhoons are (in a decreasing order of severity) September, August, October, and July. Typhoons have, it is true, been experienced as early as the end of March; but this is quite exceptional.

The climate of Japan is stated by the highest medical authority to be excellent for children, less so for adults, the enormous amount of moisture rendering it depressing, especially to persons of a nervous temperament and to consumptive patients. Various causes, physical and social, contribute to make Japan a less healthy country for female residents of European race than for the men.

The table on page 87 gives the average of twenty years' observations (1876-1895) made at the Central Meteorological Observatory, Tōkyō.

**Books recommended.** The *Monthly and Annual Reports* of the Central Meteorological Observatory. *The Climate of Japan*, issued by the same in 1893. *The China Sea Directory*, Vol. IV.

**Cloisonné.** The art of cloisonné enamelling first became known in Japan some three hundred years ago; but it has only been brought to perfection within the last quarter of a century. The few examples in the Nijō Palace at Kyōto are small and extremely rough. Mr. Namikawa, the great cloisonné-maker of Kyōto, will show visitors specimens that look antediluvian

in roughness and simplicity, but date back no further than 1873.

Need it be explained that cloisonné is a species of mosaic, whose characteristic feature is a thin network of copper or brass soldered on to a foundation of solid metal, the interstices or cells of the network—the *cloisons*, as they are technically called—being then filled in with enamel paste of various colours, and the process completed by several bakings, rubbings, and polishings, until the surface becomes as smooth as it is hard? Enamelling has also sometimes been applied in the same way to a porcelain basis; but the best connoisseurs condemn this innovation as illegitimate, because unsuited to the nature of the material employed.

Nagoya, Kyōto, and Tōkyō are the three great centres of the enameller's art,—Nagoya, now outstripped by its larger rivals, being the oldest of the three. The Tōkyō and Kyōto styles differ considerably from each other. While Namikawa at Kyōto makes no attempt to hide the metallic contours of his lovely floral and arabesque decorations, his namesake at Tōkyō prides himself on rendering the *cloisons* invisible, thus producing either pictures that might be mistaken for paintings on porcelain, or else monochromatic effects also similar to those observed in certain kinds of old Chinese porcelain. The Tōkyō school performs the greater *tour de force*. But persons of true artistic temperament, who recognise that each material has its natural limitations, to move gracefully within which beseems genius better than overstepping them, will surely prefer the productions of the Kyōto makers, whose cloisonné is honestly cloisonné, but cloisonné with a wealth of ornament, an accuracy of design, a harmony of colour, simply miraculous when one considers the character of the material employed and the risks to which it is subjected in the process of manufacture. These risks greatly enhance the price of cloisonné ware, especially of the larger monochromatic pieces. The purchaser of a vase or plaque

must pay not only for it, but for all the others that have been inevitably spoilt in the endeavour to produce one flawless piece.

**Confucianism.** To describe in detail this Chinese system of philosophy, would be alien to the plan of the present work. Suffice it to say that Confucius (called by the Japanese *Kōshi*) abstained from all metaphysical flights and devotional ecstasies. He confined himself to practical details of morals and government, and took submission to parents and political rulers as the corner-stone of his system. The result is a set of moral truths—some would say truisms—of a very narrow scope, and of dry ceremonial observances, political rather than personal. This Confucian code of ethics has for ages satisfied the Far-Easterns of China, Korea, and Japan, but would not have been endured for a moment by the more eager, more speculative, more tender European mind.

The Confucian Classics consist of what are called, in the Japanese pronunciation, the *Shi-sho Go-kyō*, that is “the Four Books and the Five Canons.” The Four Books are “The Great Learning,” “The Doctrine of the Mean,” “The Confucian Analects,” and “The Sayings of Mencius.” Mencius, let it be noted, is by far the most attractive of the Chinese sages. He had an epigrammatic way about him and a certain sense of humour, which give to many of his utterances a strangely Western and modern ring. He was also the first democrat of the ancient East,—a democrat so outspoken as to have at one time suffered exclusion from the libraries of absolutistic Japan. The Five Canons consist of “The Book of Changes,” “The Book of Poetry,” “The Book of History,” “The Canon of Rites,” and “Spring and Autumn” (annals of the state of Lu by Confucius).

Originally introduced into Japan early in the Christian era,

along with other products of Chinese civilisation, the Confucian philosophy lay dormant during the Middle Ages, the period of the supremacy of Buddhism. It awoke with a start in the early part of the seventeenth century, when Ieyasu, the great warrior, ruler, and patron of learning, caused the Confucian Classics to be printed in Japan for the first time. During the two hundred and fifty years that followed, the whole intellect of the country was moulded by Confucian ideas. Confucius himself had, it is true, laboured for the establishment of a centralised monarchy. But his main doctrine of unquestioning submission to rulers and parents fitted in perfectly with the feudal ideas of Old Japan; and the conviction of the paramount importance of such subordination lingers on as an element of stability, in spite of the recent social cataclysm which has involved Japanese Confucianism, properly so-called, in the ruin of all other Japanese institutions.

The most eminent Japanese names among the Confucianists are Itō Jinsai and his son, Itō Tōgai, at Kyōto; Arai Hakuseki, and Ogyū Sorai at Yedo. All four flourished about the end of the seventeenth and the beginning of the eighteenth century. They were merely expositors. No Japanese had the originality—it would have been hooted down as impious audacity—to develop the Confucian system further, to alter or amend it. There are not even any Japanese translations or commentaries worth reading. The Japanese have, for the most part, rested content with reprinting the text of the Classics themselves, and also the text of the principal Chinese commentators (especially that of Shushi, 朱子), pointed with diacritical marks to facilitate their perusal by Japanese students. The Chinese Classics thus edited formed the chief vehicle of every boy's education from the seventeenth century until the remodelling of the system of public instruction on European lines after the revolution of 1868. At present they have fallen into almost total neglect, though phrases and allusions borrowed from them still pass

current in literature, and even to some extent in the language of every-day life. Seidō, the great temple of Confucius in Tōkyō, is now utilised as an Educational Museum.

*N.B.*—A friendly German critic of the first edition of this work thought Confucius unfairly judged in the opening paragraph of the foregoing article. "Confucianism anticipated modern agnosticism, on the one hand," said he, "on the other—and this consideration deserves special weight—it has formed the basis of a social fabric far more lasting than any other that the world has seen. The endurance of the Papacy is often quoted in evidence of the truth of Roman Catholicism. What, then, of Confucianism with its still higher antiquity?"

There is much force in this objection; and those who know China most intimately seem to agree in attributing her marvellous vitality and her power of assimilating barbarous tribes—both those she conquers and those that conquer her—to the fact that this great ethical system has infused its strength into the national life, and practically rules the country. We incline to agree with our critic as much as with ourselves. The best plan may perhaps be to present both sides of a question which is too complicated for any sweeping assertion about it to be wholly true.

**Books recommended.** Dr Legge's elaborate edition of *The Chinese Classics* in six large volumes, and Vol XVI of the *Sacred Books of the East*, containing the same writer's translation of the *Book of Changes* (*Yi King*).—*Confucianism*, published by the Society for Promoting Christian Knowledge, is a much briefer manual of the subject, in popular form.—The Japanese Confucianists have been made the subject of a careful study by Rev. Dr. G. W. Knox, in Vol XX. Part I of the "Asiatic Transactions."

**Conventions.** Whether we or the Japanese be the more conventional, might furnish a nice point for argument; but in any case it is *their* conventions that strike *us*. They admire certain flowers,—the plum and cherry-blossom, the wistaria, the chrysanthemum, the insignificant "seven herbs of autumn," and have written poems about these and a few others for centuries; but new flowers, however beautiful, they will not admit, at any rate, into literature. They rave about the moon; the glories and pathos of sunset touch no chord within them. Their art bristles with conventions. So do their social habits, as when, in greeting a friend, they crave pardon for rudeness of which they were never guilty. The oddest conventional item of daily life, or rather death, is their habit of inventing a fictitious date for decease. Thus, all the world knows that such and such an admiral or general died on Monday morning. Nevertheless he receives visits on the Tuesday, is promoted on the Wednesday,

perhaps makes a railway journey on the Thursday, and at last, maybe, receives official permission to die on the Friday at precisely 7.15 p.m. This make-believe is inspired by the most practical motives. In former days, when a Daimyō died away from home, he was considered a deserter and his estates were forfeited to the Crown. So, in the event of his being assassinated out-of-doors, the fact was hushed up; he was put into his palanquin, carried home, and proclaimed to have died a natural death there, thus preserving the estate to his heirs. At the present day, higher official rank brings with it a larger pension to the family. It is, therefore, a gracious act on the part of Government to permit the postponement of the date of death till after certain honours shall have been conferred.

**Cormorant-Fishing.** This strange method of fishing is mentioned in a poem found in the *Kojiki*, a work compiled in A.D. 712, while the poem itself probably dates from a far earlier age. The custom is kept up at the present day in various districts of Japan, notably on the River Nagara, near Gifu, in the province of Owari.

First catch your cormorant. "This," we are told by Mr. G. E. Gregory in Vol. X. Part I. of the "*Asiatic Transactions*,"—"this the people do by placing wooden images of the birds in spots frequented by them, and covering the surrounding branches and twigs with bird-lime, on settling upon which they stick fast. After having in this manner caught one cormorant, they place it among the bushes, instead of the image, and thus catch more." Mr. Gregory further says that the fishermen take such care of the birds that they provide them with mosquito-nets during the summer, in order to minister to their comfort! We cannot personally vouch for such an extreme of solicitude, having, seen (and alas! smelt) the birds only during the cool off-season, which they idle away in baskets in the fishermen's houses. Cormorant-fishing always takes place at night and by torch-light. The method pursued is thus described by the late Major-General

## Cormorant-Fishing.

Palmer, R.E., in a letter to the *Times*, dated 17th July, 1898 :—  
“ There are, to begin with, four men in each of the seven boats, one of whom, at the stern, has no duty but that of managing his craft. In the bow stands the master, distinguished by the peculiar hat of his rank, and handling no fewer than twelve trained birds with the surpassing skill and coolness that have earned for the sportsmen of Gifu their unrivalled pre-eminence. Amidships is another fisher, of the second grade, who handles four birds only. Between them is the fourth man, called *kako*, from the bamboo striking instrument of that name, with which he makes the clatter necessary for keeping the birds up to their work ; he also encourages them by shouts and cries, looks after spare apparatus, &c., and is ready to give aid if required. Each cormorant wears at the base of its neck a metal ring, drawn tight enough to prevent marketable fish from passing below it, but at the same time loose enough—for it is never removed—to admit the smaller prey, which serves as food. Round the body is a cord, having attached to it at the middle of the back a short strip of stiffish whalebone, by which the great awkward bird may be conveniently lowered into the water or lifted out when at work ; and to this whalebone is looped a thin rein of spruce fibre, twelve feet long, and so far wanting in pliancy as to minimize the chance of entanglement. When the fishing ground is reached, the master lowers his twelve birds one by one into the stream and gathers their reins into his left hand, manipulating the latter thereafter with his right as occasion requires. No. 2 does the same with his four birds ; the *kako* starts in with his volleys of noise ; and forthwith the cormorants set to at their work in the heartiest and jolliest way, diving and ducking with wonderful swiftness as the astonished fish come flocking towards the blaze of light. The master is now the busiest of men. He must handle his twelve strings so deftly that, let the birds dash hither and thither as they will, there shall be no impediment or fouling.

He must have his eyes everywhere and his hands following his, eyes. Specially must he watch for the moment when any of his flock is gorged—a fact generally made known by the bird itself, which then swims about in a foolish, helpless way, with its head and swollen neck erect. Thereupon the master, shortening in on that bird, lifts it aboard, forces its bill open with his left hand, which still holds the rest of the lines, squeezes out the fish with his right and starts the creature off on a fresh foray—all this with such admirable dexterity and quickness that the eleven birds still bustling about have scarce time to get things into a tangle, and in another moment the whole team is again perfectly in hand.

“As for the cormorants, they are trained when quite young being caught in winter with bird-lime on the coasts of the neighbouring Owari Gulf, at their first emigration southward from the summer haunts of the species on the northern seaboard of Japan. Once trained, they work well up to fifteen, often up to nineteen or twenty, years of age; and, though their keep in winter bears hardly on the masters, they are very precious and profitable hunters during the five-months' season and well deserve the great care that is lavished upon them. From four to eight good-sized fish, for example, is the fair result of a single excursion for one bird, which corresponds with an average of about one hundred and fifty fish per cormorant per hour, or four hundred and fifty for the three hours occupied in drifting down the whole course. Every bird in a flock has and knows its number; and one of the funniest things about them is the quick-witted jealousy with which they invariably insist, by all that cormorant language and pantomimic protest can do, on due observance of the recognized rights belonging to their individual numbers. No. 1, or ‘Ichi,’ is the *doyen* of the corps, the senior in years as well as rank. His colleagues, according to their age, come after him in numerical order. Ichi is the last to be put into the water and the first to be taken out, the

first to be fed, and the last to enter the baskets in which, when work is over, the birds are carried from the boats to their domicile. Ichi, when aboard, has the post of honour at the eyes of the boat. He is a solemn, grizzled old fellow, with a pompous, *noli me tangere* air that is almost worthy of a Lord Mayor. The rest have places after him, in succession of rank, alternately on either side of the gunwale. If, haply, the lawful order of precedence be at any time violated—if, for instance, No. 5 be put into the water before No. 6, or No. 4 be placed above No. 2—the rumpus that forthwith arises in that family is a sight to see and a sound to hear.

“ But all this while we have been drifting down, with the boats about us, to the lower end of the course, and are again abreast of Gifu, where the whole squadron is beached. As each cormorant is now taken out of the water, the master can tell by its weight whether it has secured enough supper while engaged in the hunt; failing which, he makes the deficiency good by feeding it with the inferior fish of the catch. At length all are ranged in their due order, facing outwards, on the gunwale of each boat. And the sight of that array of great ungainly sea-birds—shaking themselves, flapping their wings, gawing, making their toilets, clearing their throats, looking about them with a stare of stupid solemnity, and now and then indulging in old-maidish tiffs with their neighbours—is quite the the strangest of its little class I have ever seen, except perhaps the wonderful penguinry of the Falkland Islands, whereat a certain French philosopher is said to have even wept. Finally, the cormorants are sent off to bed, and we ourselves follow suit.”

**Cremation.** Cremation followed Buddhism into Japan about A.D. 700, but never entirely superseded the older Shinto custom of disposing of the dead by interment. Ludicrous as it may appear, cremation was first discontinued in the case of the Mikados on the representations of a fishmonger named Hachibei, who clamoured for the interment of the Emperor Go-Kōmei in

1644. On the 18th July, 1873, cremation was totally prohibited by the Government, whose members seem to have had some confused notion as to the practice being un-European and therefore barbarous. Having discovered that far from being un-European, cremation was the goal of European reformers in such matters, they rescinded their prohibition only twenty-two months later (23rd May, 1875). There are now five cremation-grounds in Tōkyō, namely Kirigaya, Higurashi, Kameido, Ōgi-Shinden, and Kami-Ochiai. The charges for cremation are: 1st class, \$7 (\$5 for children under six years of age); 2nd class \$2.50 (\$2 for children); 3rd class, \$1 50 (\$1.20 for children). The good priest of whom we caused enquiry to be made on this point, said that poor folks often came begging to be let off more cheaply, but that in these hard times it was impossible to do so.

The system is quite simple, wood being the only fuel used. The corpse, enclosed in its wooden coffin, is thoroughly consumed in about three hours. Nothing remains but a few minute splinters of bone and the teeth, which latter are preserved and often sent to the great temple at Kōya-san. The ashes are placed in an urn and buried. We should add that on the 19th June, 1874, a law was passed against intramural interment, except in certain special cases. It is still prohibited, unless when the body has been cremated before burial.

**Currency.** A gold standard was adopted in 1897, and the coinage consists of gold, silver, nickel, and copper. The chief circulating medium, however, is paper. The system is decimal, and the nomenclature as follows:—

1 <i>yen</i> (dollar)	=	100 <i>sen</i> .
1 <i>sen</i> (cent)	=	10 <i>rin</i> .
1 <i>rin</i>	=	10 <i>mō</i> (or <i>mon</i> ).
1 <i>mō</i>	=	10 <i>shu</i> .
1 <i>shu</i>	=	10 <i>kotsu</i> .

Government accounts do not take notice of any value

smaller than the *rin*; but estimates by private tradesmen often descend to *mō* and *shu*, which are incredibly minute fractions of a farthing. No coins exist, however, to represent these Lilliputian sums. There are gold pieces of 20 *yen*, 10 *yen*, and 5 *yen*; silver pieces of 1 *yen* and under, nickel pieces of 5 *sen*, copper pieces for lesser values, and paper for various values great and small, from 20 *sen* upward. The paper notes now in use are redeemable in gold, and therefore stand at par. The large oblong brass pieces with a hole in the middle, enabling them to be strung on a string, are called *tempō*, because coined during the period styled *Tempō* (A.D. 1830—1844). They are worth eight *rin*, but are now almost obsolete. The smaller round coins, also having a hole in the middle, and commonly known to foreigners as “cash,” are worth, some 10 *mō*, some 15, some 20. No coins of this kind are now produced. The style has been condemned by the modern Japanese, because not sanctioned by European precedent. But what is there to consult in such matters save convenience? And let him who has handled a thousand coppers thus strung, and attempted to handle a thousand loose ones, speak to the relative convenience of the two methods.

The Imperial mint is situated at Ōsaka. It was started under British auspices, but the last of the British employé's left in 1889. The manufactory of paper money is at Tōkyō, being carried on at an institution called the *Insatsu Kyoku*, which well deserves a visit. Both the coins and the paper notes possess great artistic merit.

In Japan, as elsewhere, financiers have been engrossed by the monometallic and bimetallic controversy, the currency problem being not the least of those which the Government has had to solve. Forty years ago, when the country was still practically closed, little specie was in actual use, but there existed a banking system which sustained mercantile credit for the limited amount of internal business then transacted. Later, paper money

was extensively employed, and at one time suffered great depreciation, but was brought again to a par with silver by the issue of convertible silver notes, and so remained for over a decade. The industrial boom which followed the war with China created a necessity for securing foreign capital to finance multitudinous undertakings which Japan herself had not the means to carry on unaided. Thereupon the Government, recognising the impossibility of borrowing in the Western money markets so long as Japan remained on a silver basis, passed a bill making the currency a gold one in the ratio of  $32\frac{1}{3}$  to 1, or say  $2/0\frac{1}{2}$  sterling per *yen*. The extreme difficulty of the situation could scarcely have been more strikingly exemplified than it has been by the circumstance that, at the moment of penning these lines, in the brief interval between Japan's decision to adopt a gold standard and the putting of that decision into effect, the relative value of the two metals has already again varied as much as five-eighths of a penny by the continued appreciation of gold. Far be it from ignoramuses like ourselves to venture into the controversial quagmire. We will merely express a pious, though not very sanguine, hope that the measures now taken by Japan's financiers may secure the end in view, and at the same time do away with those violent fluctuations in exchange which have been the bane of trade for several years past.

**Books recommended.** *Abridged History of the Copper Coins of Japan*, by Léon Van der Polder, printed in Vol. XIX. Part II. of the "Asiatic Transactions."

**Cycle.** "Better fifty years of Europe than a cycle of Cathay." But it has been pointed out that there is, after all, little difference between the two terms of the comparison. The Chinese cycle, which the Japanese employ for historical purposes, has but sixty years (See Article on **TIME**).

**Daimyō.** The Daimyōs were the territorial lords or barons of feudal Japan. The word means literally "great name." Accordingly, during the Middle Ages, warrior chiefs of less degree, corresponding, as one might say, to our knights or

baronets, were known by the correlative title of *Shōmyō*, that is, "small name." But this latter fell into disuse. Perhaps it did not sound grand enough to be welcome to those who bore it. Under the Tokugawa dynasty, which ruled Japan from A.D. 1603 to 1867, the lowest Daimyōs owned land assessed at ten thousand bales of rice per annum, while the richest fief of all—that of Kaga—was worth over a million bales. The total number of the Daimyōs in modern times was about three hundred.

It should be borne in mind that the Daimyōs were not the only aristocracy in the land, though they were incomparably the richest and the most important. In the shadow of the Mikado's palace at Kyōto, poor but very proud of their descent from gods and emperors, looking down on the feudal Daimyō aristocracy as on a mere set of military adventurers and *parvenus*, lived, or rather vegetated through centuries, the *Kuge*, the legitimist aristocracy of Japan. The revolution of 1868, in bringing about the fall of the Daimyōs, at last gave the *Kuge* their opportunity. With the restoration of the Mikado to absolute power, they too emerged from obscurity; and on the creation of a new system of ranks and titles in 1884, they were not forgotten. The old *Kuge* took rank as new dukes, marquises, and counts, and, what is more, they were granted pensions.

**Books recommended.** *The Feudal System in Japan under the Tokugawa Shōguns*, by J. H. Gubbins, printed in Vol. XV. Part II. of the "Asiatic Transactions." Reference to Mr. Gubbins' learned essay will show that the subject of *Daimyōs* is not so simple as might appear at first sight—T. R. H. McClatchie's *Feudal Mansions of Yedo*, in Vol. VII. Part III. of the same, gives interesting details of the "palaces" in which the *Daimyōs* lived while attending on the Shōgun at Yedo.

**Dances.** Our single word "dance" is represented by two in Japanese—*mai* and *odori*, the former being a general name for the more ancient and, so to say, classical dances, the latter for such as are newer and more popular. But the line between the two classes is hard to draw, and both agree in consisting mainly of posturing. Europeans dance with their feet,—not to

say their legs,—Japanese mainly with their arms. The dress, or rather undress, of a European *corps de ballet* would take away the breath of the least prudish Oriental.

One of the oldest Japanese dances is the *Kagura*, which may still often be seen in the grounds of certain temples. The performers wear masks and quaint gowns of real or imitation damask. The original of the *Kagura* is said to have been the dance by means of which, soon after the beginning of the world, the Sun-Goddess was lured from a cavern into which she had retired, thus plunging all creation in darkness. The sacred dances at Nara and Ise belong to this category; but the *Ise Ondo*, sometimes mentioned by travellers, is a later profane invention,—apparently an adaptation of the *Genroku Odori*, a dance that may still occasionally be seen on the stage.

The *Bon Odori*, a popular dance which takes place on certain days in summer all over provincial Japan, is believed to have a Buddhist origin, though its meaning is far from clear. The details vary from village to village; but the general feature of this dance is a large circle or wheel of posturing peasants, who revolve to the notes of the song sung and the flute and drum played by a few of their number in the middle. Kyōto and Tōkyō, being too civilised for such rustic exercises in which all share, do their dancing by proxy. There, and in the other large towns, the dancing girls (*geisha*) form a class apart. While one or more of the girls dance, others play the *shamisen* and sing the story; for Japanese dances almost always represent some story, they are not mere arabesques. Herein the intimate connection that has always subsisted between dancing and the drama finds its explanation, as will be better understood by reference to the article on the THEATRE. The *Kappore* and the *Shishi-mai*, or Lion Dance, are among those most often executed in the streets by strolling performers.

The very newest of all forms of dancing in Japan is of course that borrowed from Europe a few years ago. Its want of dignity,

together with certain disagreeable rumours to which the unwonted meeting of the two sexes has given rise from time to time, have caused the innovation to be looked at askance by many who are otherwise favourable to European manners and customs. A writer in the number for July, 1891, of an excellent periodical entitled *Fūzoku Gurahō*, says that, whereas his imagination had painted a civilised ball-room as a vision of fairy-land, its reality reminded him of nothing so much as lampreys wriggling up to the surface of the water, and (*passez-ni le mot*) fleas hopping out of a bed.

**Decorations.** The heraldry of feudal Japan did not include orders of knighthood, or decorations for military and other service. Modern Japan imitated these things from Europe in the year 1875. There are now six orders of knighthood, namely, the Order of the Chrysanthemum, the Order of the Paulownia, the Order of the Rising Sun, the Order of the Sacred Treasure, the Order of the Crown, and the Order of the Golden Kite. The Order of the Crown is for ladies only. All the orders are divided into various classes. The Grand Cordon of the Order of the Chrysanthemum is the highest honour which the Japanese Court can bestow. It is, therefore, rarely bestowed on any but royal personages. The Order of the Sacred Treasure is the distinction now most frequently conferred on foreign employes of the Government for long and meritorious service, the class given being usually the third, fourth, fifth, or sixth, according to circumstances—rarely the second. The holder of such a decoration, down to the third class inclusive, is, even though he be a civilian, granted a military funeral.

We next come to the War Medal, of which there is but one class. Conformably with the usage of European countries, it is given only for foreign service, not for service in civil war. Those who took part in the Formosan expedition of 1874 and in the late China war gained it, not those who helped to put down the Satsuma rebellion. After it rank the Civil Medals,

distinguished by a red, a blue, and a green ribbon respectively. Then there is the Yellow Ribbon Medal, conferred on those who made proof of patriotism by subscribing to the Coast Defence Fund in 1887. It is divided into two classes, called respectively Gold and Silver. More recent still are the Commemorative Medal of 1889 distributed to those who were present at the proclamation of the Constitution on the 11th February of that year, and the medal struck in 1894 for those who assisted at the celebration of the Silver Wedding of their Imperial Majesties. Of both these medals there are two classes, —Gold for princes, Silver for lesser folk.

The Order of the Kite, conferred for military merit only, is the newest of all the Japanese decorations. It was established on the 11th February, 1890, in commemoration of Jimmu Tennō, the Romulus of Japan.

**Demoniacal Possession.** Chinese notions concerning the superhuman powers of the fox, and in a lesser degree of the badger and the dog, entered Japan during the early Middle Ages. One or two mentions of magic foxes occur in the *Uji Jūi*, a story-book of the eleventh century; and since that time the belief has spread and grown, till there is not an old woman in the land—or, for the matter of that, scarcely a man either—who has not some circumstantial fox story to relate as having happened to some one who is at least the acquaintance of an acquaintance. As recently as 1889, a tale was widely circulated and believed of a fox having taken the shape of a railway train on the Tōkyō-Yokohama line. The phantom train seemed to be coming towards a real train which happened to be running in the opposite direction, but yet never got any nearer to it. The engine-driver of the real train seeing all his signals to be useless, put on a tremendous speed. The result was that the phantom was at last caught up, when, lo and behold! nothing but a crushed fox was found beneath the engine-wheels.

The name of such tales is legion. More curious and interesting is the power with which these demon foxes are credited of taking up their abode in human beings in a manner similar to the phenomena of possession by evil spirits, so often referred to in the New Testament. Dr Baelz, of the Imperial University of Japan, who has had special opportunities of studying such cases in the hospital under his charge, has kindly communicated to us some remarks, of which the following is a *résumé* :—

“Possession by foxes (*kitsune-tsuki*) is a form of nervous disorder or delusion, not uncommonly observed in Japan. Having entered a human being, sometimes through the breast, more often through the space between the finger-nails and the flesh, the fox lives a life of his own, apart from the proper self of the person who is harbouring him. There thus results a sort of double entity or double consciousness. The person possessed hears and understands everything that the fox inside says or thinks; and the two often engage in a loud and violent dispute, the fox speaking in a voice altogether different from that which is natural to the individual. The only difference between the cases of possession mentioned in the Bible and those observed in Japan is that here it is almost exclusively women that are attacked—mostly women of the lower classes. Among the predisposing conditions may be mentioned a weak intellect, a superstitious turn of mind, and such debilitating diseases as, for instance, typhoid fever. Possession never occurs except in such subjects as have heard of it already, and believe in the reality of its existence.

“The explanation of the disorder is not so far to seek as might be supposed. Possession is evidently related to hysteria and to the hypnotic phenomena which physiologists have recently studied with so much care, the cause of all alike being the fact that, whereas in healthy persons one half of the brain alone is actively engaged—in right-handed persons the left half of the

brain, and in left-handed persons the right—leaving the other half to contribute only in a general manner to the function of thought, nervous excitement arouses this other half, and the two—one the organ of the usual self, the other the organ of the new pathologically affected self—are set over against each other. The rationale of possession is an auto-suggestion, an idea arising either with apparent spontaneity or else from the subject-matter of it being talked about by others in the patient's presence, and then overmastering her weak mind exactly as happens in hypnosis. In the same manner, the *idea* of the possibility of cure will often actually effect the cure. The cure-worker must be a person of strong mind and power of will, and must enjoy the patient's full confidence. For this reason the priests of the Nichiren sect, which is the most superstitious and bigoted of Japanese Buddhist sects, are the most successful expellers of foxes. Occasionally fits and screams accompany the exit of the fox. In all cases—even when the fox leaves quietly—great prostration remains for a day or two, and sometimes the patient is unconscious of what has happened.

“To mention but one among several cases, I was once called in to a girl with typhoid fever. She recovered; but during her convalescence, she heard the women around her talk of another woman who had a fox, and who would doubtless do her best to pass it on to some one else, in order to be rid of it. At that moment the girl experienced an extraordinary sensation. The fox had taken possession of her. All her efforts to get rid of him were vain. “He is coming! he is coming!” she would cry, as a fit of the fox drew near. “Oh what shall I do? Here he is!” And then, in a strange, dry, cracked voice, the fox would speak, and mock his unfortunate hostess. Thus matters continued for three weeks, till a priest of the Nichiren sect was sent for. The priest upbraided the fox sternly. The fox (always, of course, speaking through the girl's mouth) argued on the other side. At last he said: “I am tired of her. I ask

no better than to leave her. What will you give me for doing so?' The priest asked what he would take. The fox replied, naming certain cakes and other things, which, said he, must be placed before the altar of such and such a temple, at 4 p.m. on such and such a day. The girl was conscious of the words her lips were made to frame, but was powerless to say anything in her own person. When the day and hour arrived, the offerings bargained for were taken by her relations to the place indicated, and the fox quitted the girl at that very hour.

"A curious scene of a somewhat similar nature may occasionally be witnessed at Minobu, the romantically situated chief temple of the Nichiren sect, some three days' journey from Tōkyō into the interior. There the people sit praying for hours before the gigantic statues of the ferocious-looking gods called Ni-ō, which are fabled to have been carried thither from Kamakura in a single night on the back of the hero Asaina some six hundred years ago. The devotees sway their bodies backwards and forwards, and ceaselessly repeat the same invocation, *Namu myōhō renga kyō!* *Namu myōhō renga kyō!* At last, to some of the more nervous among them, wearied and excited as they are, the statues' eyes seem suddenly to start into life, and they themselves rise wildly, feeling a snake, or maybe a tiger, inside their body, this unclean animal being regarded as the physical incarnation of their sins. Then, with a cry, the snake or serpent goes out of them, and they themselves are left fainting on the ground."—

So far Dr. Baelz. His account may be supplemented by the remark that not only are there persons believed to be possessed by foxes (*kitsune-tsuki*), but others believed to possess foxes (*kitsune-mochi*), in other words to be wizards or witches commanding unseen powers of evil which they can turn loose at will upon their enemies. The following extract from a Japanese newspaper (the *Nichi-Nichi-Shimbun* of the 14th August, 1891) may serve to illustrate this point:—

“ In the province of Izumo, more especially in the western portion, there exists a peculiar custom called fox-owning, which plays an important part in marriages and transfers of landed property. When a marriage is being arranged between persons residing several leagues apart and unacquainted with each other, enquiries into such points of family history as a possible taint of leprosy or phthisis are subordinated to the first grand question : is or is not the other party a fox-owner ? To explain this term, we may say that fox-owning families are believed to have living with them a tribe of small, weazle-like foxes to the number of seventy-five, called human foxes, by whom they are escorted and protected wherever they go, and who watch over their fields and prevent outsiders from doing them any damage. Should, however, any damage be done either through malice or ignorance, the offender is at once possessed by the fox, who makes him blurt out his crime and sometimes even procures his death. So great is the popular fear of the fox-owners that any one marrying into a fox-owning family, or buying land from them, or failing to repay money borrowed from them, is considered to be a fox-owner too. The fox-owners are avoided as if they were snakes or lizards. Nevertheless, no one ever asks another point blank whether or not his family be a fox-owning family ; for to do so might offend him, and the result to the enquirer might be a visitation in the form of possession by a fox. The subject is therefore never alluded to in the presence of a suspected party. All that is done is politely to avoid him.

“ It should be noticed, moreover, that there are permanent fox-owners and temporary fox-owners. The permanent fox-owners silently search for families of a similar nature to marry into, and can never on any account intermarry with outsiders, whatever may be the inducement in the shape of wealth or beauty. Their situation closely resembles that of the pariahs and outcasts of former times. But even the strictest rules will sometimes be broken through by love which is a thing apart,

and liaisons will be formed between fox-owners and outsiders. When such an irremediable misfortune takes place, parents will renounce even their well-beloved only son, and forbid him to cross their threshold for the rest of his life. Temporary fox-owners are those who have been expelled from the family for buying land from a permanent fox-owner. These circumstances conspire to give security to the fox-owners (whether such in truth or imagination, we are not in a position to say); for no one will harm them by so much as a hair's breadth. Therefore they are all well-to-do; some are even said to be among the most affluent families in the province. The very poorest people that have borrowed money from them will strain every nerve to raise money to repay the loan, because failure to do so would make others regard them as fox-owners and shun them. The result of all this is that a nervous malady resembling possession is much commoner in this province than elsewhere, and that Dr. Shumamura, assistant-professor at the Imperial University,\* during his tour of inspection there this summer, has come across no less than thirty-one cases of it."

To this may be added that in the Oki Islands, off the coast of Izumo, the superstition is modified in such wise that dogs, not foxes, are the magic creatures. The human beings in league with them are termed *inu-gami-mochi*, that is, "dog-god owners." When the spirit of such a magic dog goes forth on an errand of mischief, its body remains behind, growing gradually weaker, and sometimes dying and falling to decay. When this happens, the spirit, on its return, takes up its abode in the body of the wizard, who thereupon becomes more powerful than ever. Our informant was a peasant from the Oki Islands,—the best authority on such a point, because himself a believer and with no thesis to prove.

Oddly enough, we ourselves once had to submit to exorcism at the hands of Shintō priests. It was in the summer of

---

\* Assistant, that is, to Dr. Baelz.

1879, the great cholera year, and we were accused by the authorities of a certain village at which we desired to halt of having brought the demon of cholera with us. For, true to human nature, each town, each village, at that sad season, always proclaimed itself spotless, while loudly accusing all its neighbours of harbouring the contagion. Accordingly, after much parley, which took place in the drenching rain, with night approaching and with the impossibility of finding another shelter for many miles, some Shintō priests were sent for. They arrived in their white vestments and curiously curved hats, and bearing branches of trees in their hands. They formed in two lines on either side of the way, and between them our little party of two Europeans and one Japanese servant had to walk. As we passed, the priests waved the dripping branches over our heads, and struck us on the back with naked swords. After that, we were sullenly accorded a lodging for the night. To the honour of the Japanese government, let it be added that when we returned to Tōkyō and reported the affair, the village authorities were at once deposed and another mayor and corporation set to reign in their stead. Perhaps we ought to apologise for thus obtruding our own personal adventures on the reader. We have only hesitatingly done so, because it seems to us that the exorcism of two Englishmen near the end of the nineteenth century is a little incident sufficiently strange to merit being put on record.

As for badgers, they are players of practical jokes rather than seriously wicked deceivers. One of their pranks is to assume the shape of the moon ; but this they can only do when the real moon is also in the sky. Another common trick of theirs is to beat the tattoo on their stomach (*tanuki no hara-tsuzumi*). In art they are generally represented thus diverting themselves, with an enormously protuberant abdomen for all the world like a drum.

**Divination.** Astrology, horoscopy, palmistry, physiognomy, foretelling the future by dreams,—all these forms of

superstition are current in Japan ; but the greatest favourite is divination by means of the Eight Diagrams of classical China. No careful observer can walk through the streets of any large city without noticing here and there a little stall where a fortune-teller sits with his divining rods in front of him and small blocks inscribed with sets of horizontal lines, some whole, some cut in two. The manipulation of these paraphernalia embodies a highly complicated system of divination called *Eki*, literally "Changes," which is of immemorial antiquity. Confucius himself professed his inability to understand the matter thoroughly, and would fain have had fifty years added to his life for the purpose of plunging more deeply into its mysteries. The common fortune-tellers of to-day have no such qualms. Shuffling the divining rods, they glibly instruct their clients in all such thorny matters as the finding of lost articles, the propriety of removing to another quarter of the town, the advisability of adopting a child, lucky days for marriage, or for undertaking a journey, occasionally---if those in power be not much maligned---even affairs of state. Mr. Takashima, one of the leading citizens of Yokohama, traces his wealth to his imprisonment when a lad ; for in gaol a dog-eared copy of Confucius' venerable treatise on the Diagrams was his sole companion. He has not only realised a fortune by obedience to its precepts, but has published a voluminous commentary on the subject.

Few resident foreigners have any notion of the extent to which the Japanese with whom they come in contact are still under the influence of this order of ideas. We will give but one among several instances of which we have had personal cognizance. A favourite dog of the present writer's was lost in November, 1892, and all search, advertisement, and application to the police, proved unavailing. Meanwhile, the servants and their friends privately had recourse to no less than three diviners, two of whom were priests. One of these foretold

the dog's return in April, and another directed that an ancient ode containing the words, "If I hear that thou awaitest me, I will forthwith return," should be written on slips of paper and pasted upside down on the pillars of the house. It was the sight of these slips that drew our attention to the matter. The best of it is that the dog was found, and that, too, in a month of April, namely, April, 1896, after having been missing for three years and five months. How then attempt, with any good grace, to discredit the fortune-teller in the eyes of these simple folk?

**Books recommended.** *The Yi King*, by Rev. Dr Legge, published as Vol XVI of the "Sacred Books of the East."—Sugiura's translation of Takashima's book entitled *Eku dan*. For popular superstitions, see a paper by P. Elmann in Part 57 of the *German Asiatic Transactions*.

**Divorce.** Divorce, extremely common among the lower classes in Japan, is comparatively rare among the upper classes. Why, indeed, should a man take the trouble to get separated from an uncongenial wife, when *any* wife occupies too inferior a position to be able to make herself a serious nuisance, and when society has no objection to his keeping any number of mistresses? As for the actual law on the subject, we have not been able to ascertain it, and are under the impression that it is not well-defined. Until the time of the late revolution, Confucian ideas on the subject modelled the law. Now, according to Confucius, there were seven grounds on which a man might divorce his wife, namely: disobedience, barrenness, lewd conduct, jealousy, leprosy or any other foul and incurable disease, talking too much, and thievishness;—in plain English, he could send away his wife whenever he got tired of her. But her rights as against him were far less extensive. The new Law of Persons, published in 1890 as part of the Civil Code, aimed at bringing Japanese usage into closer conformity with European ideas on this, as on other subjects; but it has never gone into force and is being subjected to revision. In fact, being too glaringly

opposed to inveterate custom, it may be said to have been still-born.

In the year 1894, the latest for which statistics have been published, the proportion of divorces to marriages throughout Japan was as follows :

Marriages : 8.64 per thousand of the entire population.

Divorces : 2.74 per thousand.

In other words, nearly one marriage out of every three ended in a divorce. These figures show, however, a slight improvement on the preceding year, when the statistics were 8.66 and 2.82 for the marriages and divorces respectively. Practically the proportion of divorces to marriages has remained constant for the whole term of years for which statistics are available. (See also Article on MARRIAGE.)

**Book recommended.** *Japanisches Familien- und Erbrecht*, by Dr. H. Weipert, in Part 43 of the *German Asiatic Transactions*, pp. 104-7.

**Dolmens.** See ARCHEOLOGY.

**Dress.** It would take a folio volume elaborately illustrated to do justice to all the peculiarities of all the varieties of Japanese costume.

Speaking generally, it may be said that the men are dressed as follows. First comes a loin-cloth (*shita-obi*) of bleached muslin. Next to this a shirt (*juban*) of silk or cotton, to which is added in winter an under-jacket (*dōgi*) of like material. Outside comes the gown (*kimono*), or in winter two wadded gowns (*shitagi* and *uwagi*), kept in place by a narrow sash (*obi*). On occasions of ceremony, there is worn furthermore a sort of broad pair of trousers, or perhaps we should rather say a divided skirt, called *hakama*, and a stiff coat called *haori*. The *hakama* and *haori* are invariably of silk, and the *haori* is adorned with the wearer's crest in three places. The head is mostly bare, but is sometimes covered by a very large straw hat, while on the feet is a kind of sock, named *tabi*, reaching only to the ankle, and having a separate compartment

for the big toe. Of straw sandals there are two kinds, the movable *zōri* used for light work, and the *wara-ji* which are bound tightly round the feet and used for hard walking only. People of means wear only the *tabi* indoors, and a pair of wooden clogs, called *geta*, out-of-doors. The native costume of a Japanese gentleman is completed by a fan, a parasol, and in his belt a pipe and tobacco-pouch. Merchants also wear at their belt what is called a *yatute*—a kind of portable ink-stand with a pen inside. A cheap variety of the *kimono*, or gown, is the *yukata*,—a cotton dressing-gown, originally meant for going to the bath in, but now often worn indoors of an evening as a sort of *déshabille*.

Take it altogether, the Japanese gentleman's costume, and that of the ladies as well, is a highly elegant and sanitary one. The only disadvantage is that the flopping of the *kimono* hinders a free gait. Formerly the Japanese gentleman wore two swords, and his back hair was drawn forward in a cue over the carefully shaven middle of the skull ; but both these fashions are obsolete. The wearing of swords in public was interdicted by law in 1876, and the whole gentry submitted without a blow.

Besides the loin-cloth, which is universal, the men of the lower classes, such as coolies and navvies, wear a sort of dark-coloured pinafore (*hara-gake*) over the bust, crossed with bands behind the back. They cover their legs with tight-fitting drawers (*momo-hiki*) and a sort of gaiters (*kyahan*). Their coat, called *shirushi-banten*, is marked on the back with a Chinese character or other sign to show by whom they are employed. But jinrikisha-men wear the *happi*, which is not thus marked—that is, when they wear anything ; for in the country districts and in the hot weather, the loin-cloth is often the sole garment of the common people, while the children disport themselves in a state of nature. It is not unusual to see a kerchief (*hachi-maki*) tied over the brow, to prevent the perspiration from running into the eyes. Travellers of the middle and lower classes are often to be distinguished by

their *kimono* being lifted up and shoved into the sash behind, by a kind of silk drawers called *patchi*, by a sort of mitten or hand-protector called *tekkō*, and by a loose overcoat (*kappa*—the word is a corruption of the Spanish *capa*). The peasants wear a straw overcoat (*mino*) in rainy or snowy weather.

The Japanese costume for women is less different from that of the men than is the case with us. In many districts the peasant women wear trousers and rain-coats like their husbands. This, coupled with the absence of beard in the men, often makes it difficult for a new-comer to distinguish the sexes. In the towns the various elements of female dress are as follows. Beneath all, come two little aprons round the loins (*koshi-maki* and *suso-yoke*), then the shirt, and then the *kimono* or *kimonos* kept in place by a thin belt (*shita-jime*). Over this is bound the large sash (*obi*), which is the chief article of feminine adornment. In order to hold it up, a sort of panner or "improver" (*obi-age*) is placed underneath, while a handsome string (*obi-dome*) keeps it in position above. Japanese women bestow lavish care on the dressing of their hair. Their combs and hair-pins of tortoise-shell, coral, and other costly materials often represent many months of their husbands' salaries. Fortunately all these things, and even dresses themselves, can be handed down from mother to daughter, as jewels and lace may be in European lands, Japanese ladies' fashions not changing quickly.

A Japanese lady's dress will often represent a value of \$200, without counting the ornaments for her hair, worth perhaps as much again. A woman of the smaller shop-keeping class may have on her, when she goes out holiday-making, some \$40 or \$50 worth. A gentleman will rarely spend on his clothes as much as he lets his wife spend on hers. Perhaps he may not have on more than \$60 worth. Thence, through a gradual decline in price, we come to the coolie's poor trappings, which may represent as little as \$5, or even \$2, as he stands.

Children's dress is more or less a repetition in miniature of that of their elders. Long swaddling-clothes are not in use. Young children have, however, a bib. They wear a little cap on their heads, and at their side hangs a charm-bag (*kinchaku*), made out of a bit of some bright-coloured damask, containing a charm (*mamori-fuda*) supposed to protect them from being run over, washed away, etc. There is also generally fastened somewhere about their little person a metal ticket (*maigo-fuda*) with their name and address, as a precaution against their getting lost. Japanese girls do not, like ours, remain in a sort of chrysalis state till seventeen or eighteen years of age, and then "come out" in gorgeous attire. The tiniest tots are the most brilliantly dressed. Thenceforward there is a gradual decline the whole way down to old age, which final stage is marked by the severest simplicity. Many old ladies even cut their hair short. In any case, they never exhibit the slightest *coquetterie de vieillesse*.

Those having any acquaintance with Japan, either personal or by hearsay, will understand that when we say that the Japanese wear such and such things (in the present tense), we speak of the native costume, which is still in fairly common use, though unfortunately no longer in universal use. The undignified billycocks and pantaloons of the West are slowly but surely supplanting the picturesque, aristocratic-looking native garb,—a change for which the Government is mainly responsible, as it obliges almost all officials to wear European dress when on duty, and of course the inferior classes ape their betters. Nor have the women, though naturally more conservative, been altogether able to resist the radicalism of their time and country. In the year 1866 some evil counsellor induced the Court to order gowns from Paris—we beg pardon, from Berlin—likewise corsets, and those European shoes in which a Japanese lady finds it so hard to walk without looking as if she had taken just a little drop too much. Need it be said that the Court speedily found imitators?

Indeed, as a spur to the recalcitrant, a sort of notification was issued, "recommending" the adoption of European costume by the ladies of Japan. In vain the local European press cried out against the barbarism, in vain every foreigner of taste endeavoured privately to persuade his Japanese friends not to let their wives make guys of themselves, in vain Mrs. Cleveland and the ladies of America wrote publicly to point out the dangers with which tight lacing, and European fashions generally, threaten the health of those who adopt them. The die was cast when, on the 1st November, 1886, the Empress and her ladies appeared in their new German dresses at a public entertainment. The Empress herself would doubtless look charming in any garb. Would one could say as much for all those with her and for those that followed after! The very highest society of Tōkyō contained, it is true, from the beginning, a few—a very few—women of whose dress Pierre Loti could say without flattery, "*toilette en somme qui serait de mise à Paris et qui est vraiment bien portée.*" But the majority! No caricature could do justice to the bad figures, the ill-fitting garments, the screeching colours, that ran riot between 1886 and 1889. Since then there has been a wave of reaction, in consequence of which most ladies have happily returned to the national costume. How charming it is to see a bevy of them thus dressed,—*dressed*, mind you, not merely having clothes on,—such a symphony of greys and browns and other delicate hues of silk and brocade, the faultless costume being matched by the coy and at the same time perfectly natural and simple manners and musical voice of the wearers!

**Earthquakes and Volcanoes.** "Oh! how I wish I could feel an earthquake!" is generally among the first exclamations of the newly-landed European. "What a paltry sort of thing it is, considering the fuss people make about it!" is generally his remark on his *second* earthquake (for the *first* one he invariably sleeps through). But after the fifth or sixth

he never wants to feel another; and his terror of earthquakes grows with length of residence in an earthquake-shaken land, such as Japan has been from time immemorial. Indeed, geologists tell us that much of Japan would never have existed but for the seismic and volcanic agency which has elevated whole districts above the ocean by means of repeated eruptions.

The cause of earthquakes remains obscure. The learned incline at present to the opinion that the causes may be many and various; but the general connection between earthquakes and volcanoes is not contested. The "faulting" which results from elevations and depressions of the earth's surface, the infiltration of water to great depths and the consequent generation of steam, the caving in of subterranean hollows—hollows themselves produced in all probability by chemical degradation—these and other causes have been appealed to as the most probable. One highly remarkable fact is that volcanic and earthquake-shaken regions are almost always adjacent to areas of depression. The greatest area of depression in the world is the Pacific basin; and accordingly round its borders, from Kamchatka through the Kuriles to Japan, thence through a line of small islands to the Philippines and to Java, then eastward to New Zealand, and right up the western coast of South America, is grouped the mightiest array of volcanoes that the world contains. Another fact of interest is the greater occurrence of earthquakes during the winter months. This has been explained by Dr. Knott as the result of "the annual periodicity of two well-known meteorological phenomena—namely, snow accumulations over continental areas, and barometric gradients."\*

The Japanese, like most other nations, had perforce submitted to the ravages of earthquakes, without attempting to investigate the causes of earthquakes scientifically. All they

---

\* See his learned paper on the subject in Vol. IX. Part I, of the *Transactions of the Seismological Society of Japan*.

had done was to collect anecdotes and superstitions connected with the subject, one of the most popular of which latter (popular indeed in many parts of the world besides Japan) is that earthquakes are due to a large subterranean fish, which wiggles about whenever it wakes up. As for Japanese history, it is a concatenation of earthquake disasters, exceeded only by those which have desolated South America.

With the advent of the theoretically minded European, a new era was inaugurated. A society named the Seismological Society of Japan was started in the spring of 1880, chiefly through the efforts of Professor John Milne, F.R.S., who has ever since devoted all his energies to wrestling with the problems which earthquakes, earth oscillations, earth currents, and seismic and volcanic phenomena generally, supply in such perplexing quantity. The Japanese government, too, has lent a helping hand by the establishment of a chair of seismology in the Imperial University, and of several hundreds of observing stations all over the empire—an empire, remember, dotted with no less than fifty-one active volcanoes, and experiencing about five hundred shocks yearly.

Can earthquakes be prevented? If they cannot be prevented, can they at least be foretold? Both these questions must unfortunately be answered in the negative. Still, certain practical results have been arrived at by Mr. Milne and his fellow-workers, which are by no means to be despised. It is now possible to make what is called a "seismic survey" of any given plot of ground, and to indicate which localities will be least liable to shocks. It has also been shown that the complete isolation of the foundations of a building from the surface of the soil obtains for the building comparative immunity from damage. The reason is that the surface shakes more than the adjacent lower layers of the soil, just as, if several billiard-balls be placed in a row, an impulse given to the first one will make only the last one fly off, while those in the middle remain

nearly motionless. For the same reason, it is dangerous to build near the edge of a cliff. To architects, again, various hints have been given, both from experience accumulated on the spot, and also from that of Manila and other earthquake-shaken localities. The passage from natural to artificial vibrations being obvious, Professor Milne has been led on to the invention of a machine which records, after the manner of a seismograph, the vibrations of railway trains. This machine keeps an automatic record of all the motions of a train, and serves to detect irregularities occurring at crossings and points, as also those due to want of ballast, defects in bridges, and so on.

Thus, imperfect as it still is, imperfect as the nature of the case may perhaps condemn it always to remain, the science of seismology has already borne practical fruit in effecting a saving of tens of thousands of dollars. To those who are interested in seismometers and seismographs, in earthquake maps and earthquake catalogues, in seismic surveys, in microseisms, earth tremors, earth pulsations, and generally in earth physics, we recommend a perusal of the *Transactions of the Seismological Society of Japan*, complete in sixteen volumes, of its continuation, the *Seismological Journal of Japan*, and of the volume entitled *Earthquakes*, by Professor Milne in the *International Scientific Series*. Volume IX. Part II. of the *Seismological Transactions* is specially devoted to the volcanoes of Japan, and contains a mass of statistics, anecdotes, historical details, and illustrations—each individual volcano, from the northernmost of the Kuriles down to Asō-san in Kyūshū, which is the largest crater in the world, being treated of in detail. The *Ansei Kambun Roku* and the *Ansei Kambun Shi* are capitally illustrated Japanese accounts of the great earthquake which wrecked Yedo in 1855. Lovers of the ghastly will search long before they find anything more to their taste than the delineations there given of men and women precipitated out of windows, cut in two by falling beams, bruised, smashed, imprisoned in cellars, overtaken by tidal waves, or

worse still, burnt alive in one of the great fires caused by the sudden over-turning of thousands of candles and braziers all over the city. Truly these are gruesome books

**Education.** During the Middle Ages, education was in the hands of the Buddhist priesthood. The temples were the schools, the subject most insisted on was the Buddhist Sūtras. The accession of the Tokugawa dynasty to the Shogunate (A.D. 1603-1867) brought with it a change. The educated classes became Confucianist. Accordingly the Confucian Classics—the “Four Books” and the “Five Canons”—were installed in the place of honour, learnt by heart, expounded as carefully as in China itself. Besides the Chinese Classics, instruction was given in the native history and literature. Some few ardent students picked their way through Dutch books that had been begged, borrowed, or stolen from the Hollanders at Nagasaki, or bought, for their weight in gold, for the sake of the priceless treasures of medical and other scientific knowledge known to be concealed in them. But such devotees of European learning were forced to maintain the greatest secrecy, and were hampered by almost incredible difficulties. For the government of the day frowned on all things foreign, and more than one zealous student expiated by his death the crime of striving to increase knowledge.

With the revolution of 1868, the old system of education crumbled away. Indeed, even before 1868 the learning of foreign languages, especially English, had been tacitly connived at. A complete reform was initiated—a reform on Western lines—and it was carried out at first chiefly under American advice. The present Imperial University of Japan is the representative and heir of several colleges which were established in Tōkyō a quarter of a century ago—a Language College, a Medical College, a College of Engineering. At the same time, primary instruction was being placed on a new basis, and specially promising lads were sent across the sea to imbibe Western learning at its source.

When not allowed to go abroad, even well-born young men were happy to black the shoes of a foreign family, in the hope of being able to pick up foreign languages and foreign manners. Some of the more enterprising took French leave, and smuggled themselves on board homeward-bound ships. This was how—to mention but two well-known instances—the adventurous youths, Itō and Inouye, entered on the career which has led them at last to preside over the destinies of their country.\*

The University includes six faculties, namely, Law, Medicine, Engineering, Literature, Science, and Agriculture. The College of Medicine is under exclusively German influence, though there are also Japanese professors. The other colleges have professors of various nationalities, chiefly Japanese, German, and English. The students number nearly nineteen hundred. To relieve this pressure, a second University is to be inaugurated at Kyōto during the present year. Other important educational establishments started and maintained by the government are the two Higher Normal Schools for young men and women respectively, the Higher Commercial School, the Technical School, the Nobles' School, the various Naval and Military Academies, the Navigation School, the Fine Arts School, the

---

\*The death of Count Mutsu, another of Japan's leading statesmen, is announced as these sheets are passing through the press, and Mr. J. F. Lowder, the well-known barrister of Yokohama, sends the following interesting reminiscence of him to a local newspaper:—

"The following passage in the life of Count Mutsu is worthy of record, as showing the earnestness of his character. In the very early sixties, when he was in his nineteenth or twentieth year, he was in Nagasaki, desirous of acquiring a knowledge of English. A lady of my acquaintance, taking an interest in him, used to devote an hour or two every morning to teaching him to read and write, but it was not long before he came to me, despairing of his slow progress, and asking whether I could not get him a berth on board ship, where nothing but English was spoken. Believing him to be physically too weak to stand such an ordeal, I endeavoured to dissuade him, but without success; and so, with some misgiving, I shipped him as a cabin boy, which was the only position I could obtain for him, on board a small British schooner that used in those days to voyage between Nagasaki and Shanghai. How long he remained on board, I cannot say; but my recollection is that it was for a very considerable time."

Blind and Dumb School, and five Higher Schools, of which one is in Tōkyō and four are in the provinces. Another Higher School in Chōshū and an important Middle School in Satsuma derive their income from funds granted by the ex-Daimyōs of those provinces. To enter into further details would be beyond our scope. Something may be gleaned from the bare statement that the Japanese Government supports over 26,000 primary schools, and that there are numberless kindergartens both public and private. There are also numerous private colleges, large and small, of which the best-known is the *Keiō Gijuku*. Its director, Mr. Fukuzawa, is a power in the land. Writing with admirable clearness, publishing a popular newspaper, not keeping too far ahead of the times, in favour of Christianity yesterday because its adoption might gain for Japan the good-will of Western nations, all eagerness for Buddhism to-day because Buddhist doctrines can be better reconciled with those of evolution and development, pro and anti-foreign by turns, inquisitive, clever, not overballasted with judicial calmness, this eminent private schoolmaster, who might be minister of education, but who has consistently refused all office, is the intellectual father of half the men who now direct the affairs of the country.

From Mr. Fukuzawa, who leads Young Japan in ostentatiously denying the importance of all religious dogmas, is a long step to the missionaries, with whom school-teaching is of course ancillary to proselytism. Among their scholastic foundations, the Meiji Gakuin at Tōkyō and the Dōshisha University at Kyōto, both founded under American auspices, may be selected for notice. Recent misunderstandings consequent, as it would seem, on the spread of chauvinistic and anti-doctrinal opinions in Japan, have resulted in a split between the Japanese authorities of the Dōshisha and the American missionaries.

Female education is officially provided for by the Higher Normal School for Girls already referred to, the High School

attached to it, the Peeresses' School, etc., etc. Of the many private institutions, the Industrial School for Girls is the largest. Nor, in even so slight a sketch as this, is it possible to omit reference to the numerous educational societies which, for a series of years past, have done good work throughout the country. The military drill, too, which figures in the curriculum of all government schools, deserves notice. It was made obligatory in 1886, and has produced excellent results both on the physique and the spirit of the scholars. Various European sports, though not insisted on, are encouraged. Baseball seems to be that to which the young fellows take most kindly.

The leading idea of the Japanese Government in all its educational improvements, is the desire to assimilate the national ways of thinking to those of European countries. How great a measure of success has already been attained, can be best gauged by comparing one of the surviving old-fashioned literati of the Tempō period (A. D. 1830—1844) with an intelligent young man of the new school, brought up at the University or at Mr. Fukuzawa's. The two seem to belong to different worlds. At the same time it is clear that no efforts, however arduous, can make the Europeanisation complete. In effect, what is the situation? All the nations of the West have, broadly speaking, a common past, a common fund of ideas, from which everything that they have and everything that they are springs naturally, as part of a correlated whole—one Roman Empire in the background, one Christian religion at the centre, one gradual emancipation, first from feudalism and next from absolutism, worked out or now in process of being worked out together, one art, one music, one kind of idiom, even though the words expressing it vary from land to land. Japan stands beyond this pale, because her past has been lived through under conditions altogether different. China is her Greece and Rome. Her language is not Aryan, as even Russia's is. Allusions familiar from one end of Chris-

tendom to the other require a whole chapter of commentary to make them at all intelligible to a Japanese student, who often has not, even then, any words corresponding to those which it is sought to translate. So well is this fact understood by Japanese educators, that it has been customary of late years to impart most of the higher branches of knowledge through the medium of the English language. This, however, is an enormous additional weight hung round the student's neck. For a Japanese to be taught through the medium of English, is infinitely harder than it would be for English lads to be taught through the medium of Latin, as Latin does not, after all, differ so very widely in spirit from English. It is, so to say, English in other words. But between English and Japanese the gulf fixed is so wide and gaping that the student's mind must be for ever on the stretch. The simpler and more idiomatic the English, the more it taxes his powers of comprehension. It is difficult to see any way out of this dilemma. All the heartier, therefore, is the praise due to a body of educators who fight on so bravely, and on the whole so successfully.

As for the typical Japanese student, he belongs to that class of youths who are the schoolmaster's delight—quiet, intelligent, deferential, studious almost to excess. His only marked fault is a tendency common to all subordinates in Japan—a tendency to wish to steer the ship himself. “Please, Sir, we don't want to read American history any more. We want to read how balloons are made.” Such is a specimen of the requests which every teacher in Japan must have had to listen to over and over again. Actual insubordination—unknown under the old régime—has now become very frequent, scarcely a trimester passing without the boys of some important school or other striking work on the plea of disapproval of their teacher's methods or management. Herein lies a grave danger for the future. Indeed, the danger is already at the gates. Since 1888, there has sprung up a class of rowdy youths, called *sōshi* in Japanese—juvenile

agitators who have taken all politics to be their province, who obtrude their views and their presence on ministers of state, and waylay—bludgeon and knife in hand—those whose opinions on matters of public interest happen to differ from their own. They are, in a strangely modern disguise, the representatives of the wandering swashbucklers\* of the old régime. Let us hope that anarchy may never again visit Japan. If it does, it will find in this class of young men an instrument ready fitted to its hand.

**Books recommended.** The annual *Report of the Minister of State for Education*, and the *Calendars* of the University and of the various other educational institutions.—See also Miss Bacon's *Japanese Girls and Women*.

**EE—EE.** These letters which, to the perplexity of European travellers, adorn the signboard of many forwarding agencies in modern Japan, stand for the English word “express.”

**Embroidery.** The reader may tire of being told of each art in succession that it was imported into Japan from China via Korea by Buddhist missionaries. But when such is the fact, what can be done but state it? The greatest early Japanese artist in embroidery of whom memory has been preserved was Ohūjō Hime, a Buddhist nun of noble birth, who, according to the legend, was an incarnation of Kwannon, the Goddess of Mercy. After enduring relentless persecution at the hands of a cruel step-mother, she retired to the temple of Taema-dera in Yamato, where her grand embroidered picture, or *mandara* as it is called, of the Buddhist heaven with its many mansions, is still shown. The gods themselves are said to have aided her in this work.

The embroidery and brocade and painted silks of more modern days possess exquisite beauty. A comparatively recent invention is the *birōdo yūzen*, in which ribbed velvet is used as the ground for pictures which are real works of art, the velvet being partly cut, partly dyed, partly painted. Pity only, as we could not help noticing on our last visit to Kyōto, that the embroiderers tend more and more to drop the patterns of dragons and

---

\* In Japanese, *rōnin*.

phoenixes and flower-cars, etc., etc., which made their fame, and actually elect to work from photographs instead, thus degrading free art to the level of slavish imitation. They informed us that the globe-trotters prefer these less esthetic pieces with a real jinrikisha or a real street lamp-post to the formal, but oh! how beautiful, fancies of an earlier date. Doubtless new-comers have to be educated up to these things. However, being but a man, while some of his readers are sure to be ladies whose sharp eyes would soon detect mistakes, the present writer must abstain from entering into any further details or disquisitions. He would only recommend all who can to visit the Kyōto embroidery and velvet shops, and to take plenty of money in their purse. There may be two opinions about Japanese painting; there can be only one about Japanese embroidery.

Note in passing, as an instance of topsy-turvydom, that comparatively few Japanese embroiderers are women. All the best pieces are the work of men and boys.

**Employés.** See FOREIGN EMPLOYÉS

**Empress.** The Salic law was only introduced into Japan with the new Constitution of 1889. Before then, several Empresses had sat on the throne, and one of them, the Empress Jingō—excuse the name, O English reader! it signifies “divine prowess,”—ranks among the greatest heroic figures of early Japanese legend (see article on HISTORY AND MYTHOLOGY).

The present Empress is of course Empress Consort. Her name is Haru-ko, correctly translated by Pierre Loti, in his *Japoneries d'Automne*, as “l'Impératrice Printemps” Wisely abstaining from even the shadow of interference in politics, this illustrious lady, daughter of a high noble of the Court of Kyōto, devotes her life to learning and to good works, hospitals in particular engrossing her attention. The Red Cross Hospital at Akasaka in Tōkyō, one of the most spacious—one might well say luxurious—hospitals in the East, was her creation, and the Charity Hospital at Shiba in Tōkyō also enjoys her munificent patronage.

**English as she is Japped.** English as she is spoke and wrote in Japan forms quite an enticing study. It meets one on landing, in such signboard inscriptions as

TAILOR NATIVE GOUNTRY.

DRAPER, MILLINER AND LADIES OUTFITTER.

*The Ribbons, the laces, the veils, the feelings.\**

EXTRACT OF FOWL (*over an egg-shop*).

TIME PIECE SNOB.

MACHINE HAIR DRESSER.

*Superfine Smell Soap.*

*The European monkey jacket make for the Japanese*

and a hundred more The thirsty soul, in particular, can make himself merry, while he drinks, with such droll legends on bottles as

FOGREN COUNTY WINES LITTLE SEAL.

St. JUILEN *Bottled by* BORDEAUX.

WORLD NAME WINE.

Good wine, they say, needs no bush. Apparently, it is equally independent of such aid as orthography can lend.

---

\* Can the shopkeeper mean "frillings?"

† This, by the way, over an excellent restaurant.

‡ Of *what*, does not appear.

Many strange notices are stuck up, and advertisements circulated. The following is the manner in which "Fragrant Kozan Wine" is recommended to public attention:—

If health be not steady, heart is not active. Were heart active, the deeds may be done. Among the means to preserve health, the best way is to take in Kozan wine which is sold by us, because it is to assist digestion and increase blood. Those who want the steady health should drink Kozan wine. This wine is agreeable even to the females and children who can not drink any spirit because it is sweet. On other words, this pleases mouth and therefore, it is very convenient medicine for nourishing.

#### JAPAN INSTED OF COFFEE.\*

More men is not got dropsg of the legs who us this coffee, which is contain nourish.

The gate of the Nagasaki Waterworks bears this legend:

Fools, drunkards, beggars, old and young, without an attendant, should not be permitted.

---

\* I.e. being interpreted, "a Japanese substitute for coffee."

The following notice was stuck up not long ago in one of the hotels at Kyōto :

NOTICE TO THE DEALERS.

On the dinning-time nobody shall be enter to the dinning-room, and drowing-room without the guests' allow. Any dealer shall be honestly his trade, of course the sold one shall be prepare to make up the safe package.

The reader may be curious to know who " the sold one " here referred to is. Might it not perhaps be the purchaser? No; at least that is not what the hotel-keeper wished to suggest. By translating back literally into Japanese idiom, we reach his meaning, which is that the merchant who sells the things must undertake furthermore to pack them securely.

" NOTIES.

Our tooth is a very important organ for human life and countenance as you know; therefore when it is attack by disease or injury, artificial tooth is also very useful.

I am engage to the Dentistry and I will make for your purpose."

A native " Guide for Visitors to Atami " informs us that the geyser there *was discovered by a priest named Man-gwan who made many improvements on the springs. Before that day, the springs boiled out in the sea, and was a suffering to aquatic families..... If a people can not come to Atami is better to bathe in that water once or twice a day, and take good exercise in clean airs.* By " aquatic families," let it be noted, the writer means, not—as might perhaps be supposed—the fishermen, but the fishes.

English as she is Japped has even crossed the seas. The following notice adorns a laundry in Thursday Island :

We most cleanly and carefully wash our customers with cheap prices as under, Ladies—eight shillings per hundred; gentlemen seven shillings per hundred.

Letters offer some choice specimens. We select two epistolary gems, only changing the proper names. The first is from a young man who entered into friendly relations with the family of a certain consul, in order to *perfect* his English.

Saga. August 18th.

Robert Fanshaw Esq.

G. B. Consul.

Dear Sir,

I am very glad to hear that you and your family are very well and I am also quite well as usual, but my grandfather's disease is very severe without changing as customary. I fear that it is a long time since I have pay a visit to you. I wish your pardon to get away my remote crime. We have only a few hot in Saga as well as summer is over, and we feel to be very cool in morning and evening. Sometimes we have an earthquake here at now, but the mens was afright no more.

I grieves that a terrible accident took place in the school of military Saga. The story of it, a scholar had put to death some colleague with a greate stick on the floor and a doctor of anatomy dissected immediately with dead disciple, then all pupils of school were now to question its matter in the judgement seat; but do not it decide yet.

Unequivocal matter would speak you of kind letter.

I am, &c ,

K. TANAKA

The next specimen is a request for a lift in the official service.

18th July.

My dear teacher,

I am very glad to send you a letter. About three month has elapsed since I parted from you. I did not offer any words to congratulate your healthy; please excuse me.

"To drink the water of a same river" an adage tells "is heavenly fate." This shows that we ought to be friendly even in the case of smallest connection of any circumstances. It seems very valuable. Much more I studied under your care. I must say many thanks, nay I must recompense your favour. As you said, school is only a inland sea where the small afflictions of wind and waves, are met with, and I reached to the other side by a small compass of knowledge which you gave me much of the power. and now I began to sail a great ocean of the world where the whirl-wind and water-spout are met unexpectedly. I thought I would go on by the aid of your's, but ah! I must tell you a farewell, so I felt that I missed

P. T. O.

*the important compass for the voyage, and at the same time many distresses surround me. But to amuse my heart you told me that you would not forget my complaints. I called out my valour and I left my small nephew, in Tokyo, to go alone.*

*If you would befriend me to return to Tokyo, I can study much of my arms and then I will be glad that I got the light-house on the dark night of voyage by which I would reach beyond the ocean.*

*I am waiting every day for delineating air-castle in my heart. I have many to tell you but I can't now. I am studying English every day but there is no teacher. Moreover I feel inconvenient.*

*This is my first letter for foreigners so I am sure this letter should contain many mistakes; please read it over with supposition and let me know the style at any time. The furious summer is increasing its heat. Please take your self love and I wish your healthy and happily. When you sat in leisure remember that a curious wit is waiting for something in Osaka.*

*Yours truly,*

*R. YAMADA.*

“China” having been set as a theme in a Tōkyō school, one student disposed summarily of the hereditary rivals of his race by remarking that

Chinese gentlemen adjourn their tales and clutches so long as they are able. The people are all liars.

Another young essayist was more diffuse, and let us hope got better marks:—

#### CHINA.

Here is an old man whose body is very large; he is about four thousand years of age and China is his name. His autobiography tells me that he was born in early times in Eastern Asia. He was a simple baby smiling with amiable face in the primitive cradle; and as a young man, he progressed hopefully. When he was full grown he accomplished many bright acts; he married a sweet lady who conceived the beautiful children of the arts and sciences. But by and bye he became old, lame, blind and decrepit.

I must feel sorry for the sad fate of an old teacher or neighbour of mine. Why his gleamy grew gloomy? What compassion I feel for him! There are many smokes of the opium but not holy blood of the cross.

## THE CHARACTER OF THE ENGLISHMAN.

The England which occupied of the largest and greatest dominion which rarely can be. The Englishman works with a very powerful hands and the long legs and even the eminenced mind, his chin is so strong as decerved iron. He are not allowed it to escape if he did siezed something. Being spread his dominion is dreadfully extensive so that his countryman boastally say "the sun are never sets on our dominions" The Testamony of English said that he that lost the common sense, he never any benefit though he had gained the complete world. The English are cunning institutioned to establish a great empire of the Paradise. The Englishman always said to the another nation "give me your land and I will give you my Testimony." So it is not a robbed but exchanged as the Englishman always confide the object to be pure and the order to be holy and they reproach him if any them are killed to death with the contention of other man. (I shall continue the other time.)

The young essayist hits us rather hard—doesn't he?—when he drags into the garish light of day our little foible for giving a "Testimony" in exchange for "the another nation's land."

A writer, who prefixes an English preface to an interesting "Collection of Registered Trade Marks," observes that *The society in nineteenth century is always going to be civiligel, and so all things are also improved.* The muse of course ranking among "civiliging" influences, a little volume has been published at Tōkyō with the object of inducting the Far-Eastern mind into the mysteries of English verse. It is entitled *New of Pom and Song the English and Japanese.* Occasionally Japanese youths themselves, like Silas Wegg, "drop into poetry."

## THE MIDNIGHT WINDS.

At the midnight—my own darkness alone; none but God and myself !  
 A conscious slumber muffled the universe,  
 Palpitating on the lonely bed like a chilly sea in the misty dawn.  
 Be hunting (Oh) by the black boneless winds.  
 With the sewed eyes and the wild, weird, full-opened soul,  
 I'm reviewing the sheeted memories of past under an inky light;  
 Until—alas, the strange giant of winds inclosed about my breathless  
 cabin :—  
 God made a night, a midnight for me alone !

Oh, our matchless God! If the wizard rout  
 Flit in through the broken window for a lady-moon welcomed!  
 Ever a gentle violet upturns her eye:  
 Ever a radiant rose polish her thorns against.  
 I have such of none, but a withered, colorless soul!

The latter part of this poem is somewhat discursive; but the radiant rose polishing her thorns against a full stop is a genuine touch of genius. The following—so far as we apprehend its obscurities through the mist of poetic license—would appear to be a dithyramb in praise of woman, who is apostrophised as the cement of society, or, to use the youthful bard's own realistic expression, "social glue."

## HER GLEE.

The purest flame, the hottest heat  
 Is Woman's Power ever earth;  
 Which mighty black and pale down beat,  
 And made the Eden, place of birth.

Of what? of what? can thou tell me?  
 A birth of Noble, High, value—  
 The station He destined for thee—  
 Of woman, Mother, Social Glue.

Let her be moved from earth, to try,  
 What dark mist overwhelms human Race!  
 Let Lady claim with all the cry:—  
 "Can you still hold and hold your peace?"

How sweet, how mirthful, gay is Name!  
 What boon, thing, may exceed in kind?  
 Would She be praised, entolled—not Sham:  
 Tie Pale, of Both, to bound, to bind.

And now, Japanese readers, if haply any such favour this little book with their perusal, rise not in your wrath to indiot us of treachery and unkindness. We mean nothing against the honour of Japan. But finding Tōkyō life dull on the whole, we solace ourselves by a little innocent laughter at an innocent foible whenever we can find one to laugh at. You yourselves could

doubtless make up, on the subject of *Japanese as she is Englished*, an article which should be no less comical—an article which should transcribe the first lispings in “globe-trotterese,” and the perhaps still funnier, because more pretentious, efforts of those of us who think ourselves rather adepts in Japanese as spoken by the upper circles. For our own part, we can feel our heavy British accent dragging down to earth every light-winged syllable of Japanese as we pronounce it. We laugh at ourselves for this. Why should we not laugh at you when occasion offers? There is only one style of English as she is Japped which calls, not for laughter, but for the severest blame,—the style exemplified in so-called educational works, such as *Conversations in English and Japanese for Merchant who the English Language*,—*English Letter Writer, for the Gentlemen who regard on the Commercial and an Official*,—*Englishand. Japanies. Names of Letteps*, and other productions whereby shameless scribblers make money out of unsophisticated students. And yet these curiosities of literature are too grotesque for at least the European reader to be long angry with them. One of the funniest is entitled *The Practical use of Conversation for Police Authorities*. After giving “Cordinal number,” “Official Tittle,” “Parts of the Body” such as “a gung,\*” “a jow,” “the mustacheo,” diseases such as “a caucer,” “blind,” “a ginddiness,” “the megrim,” “a throat wen,” and other words useful to policemen, the compiler arrives at “Misseranianous subjects,” which take the form of conversations, some of them real masterpieces. Here is one between a representative of “the force” and an English blue-jacket:—

What countryman are you?

I am a sailor belonged to the Golden-Eagle, the English man-of-war.

Why do you strike this Jinrikisha-man?

He told me impolitely.

What does he told you impolitely?

---

\* The Japanese translation shows that “gum” is the word intended.

He insulted me saing loudly "the Sailor the Sailor" when I am passing here.

Do you striking this man for that ?

Yes.

But do not strike him for it is forbided

I strike him no moie.

\* \* \* \* \*

Have you any proof for the robber should be entirely inside origin, but not outside ?

Yes: I have.

Please explain it.

There left the hands and the foot-prints on the rail of the fence elected between the next door and No——.

The suspicious one is the cook in the next door.

The author teaches his policemen, not only to converse, but to moralise. Thus :

Japanese Police Force consists of nice young men.

But I regret that their attires are not perfectly neat.

When a constable come in conduct with a people he shall be polite and tender in his manner of speaking and movement.

If he will terrify or scold the people with enormous voice, he will become himself an object of fear for the people.

Civilized people is meek, but barbarous peoples is vain and haugty.

A cloud-like writing of Chinese character, and performance of the Chinese poem, or cross hung on the breast, would no more worthy, to pretend others to avail himself to be a great man.

Those Japanese who aquired a little of foreign language, think that they have the knowledge of foreign countries, as Chinese, English or French, there is nothing hard to success what they attempt.

They would imitate themselves to Cæsar, the ablest hero of Rome, who has been raised the army against his own country, crossing the river Rabicon.

A gleam of diffidence seems to cross the police mind when one policeman says to the other "You speak the English very well," and the other replies "You jest."

• **Book recommended.** Miss Duncan's delightful book, *A Social Departure*, Chap. VII. gives a side splitting specimen of the dialect under consideration.

**Esotericism.** When an Englishman hears the word "esoteric" mentioned, the first thing, probably, that comes into his head is Buddhism, the second the name of Mr. Sinnett or the late Madame Blavatsky. Matters stand somewhat differently in Japan. Not religion only, but every art here is or has been esoteric—poetry, music, porcelain-making, fencing, even bone-setting, and cookery itself. Esotericism is not a unique mystery shrouding a special class of subjects. It is a general attitude of the mind at a certain stage, and a very natural attitude too, if one takes the trouble to look into it. Sensible men do not wear their hearts on their sleeves for daws to peck at. Why should an artist do so with his art? Why should he desecrate his art by initiating unworthy persons into its principles? Nor is it merely a question of advisability, or of delicacy and good taste. It is a question of possibility and impossibility. Only sympathetic pupils are fitted by nature to understand certain things; and certain things can only be taught by word of mouth, and when the spirit moves one. Moreover, there comes in the question of money. Esoteric teaching of the lower arts may be said to have performed, in old days, the function of our modern system of patents. The institution of guilds belonged to the same order of ideas.

Such are, it would seem, the chief headings of the subject, considered in the abstract. Fill them out, if you please, by further reflection and further research; and if you wish to talk to your Japanese friends about esotericism, remember the fascinating words *hiden*, "secret tradition;" *hyutsu*, "secret art;" and *okugi*, "inner mysteries," which play a notable part in Japanese history and literature.

Many are the stories told of the faithful constancy with which initiation into hidden mysteries has been sought. Early in the tenth century there lived a great musician, a nobleman named **Hakuga-no-Sammi**. But one Semi-Marō was a greater musician still. He dwelt in retirement, with no other companion but

his lute, and there was a melody of which he alone had the secret. Hakuga—as he may be styled for shortness' sake—went every evening for three years to listen at Semi's gate, but in vain. At last, one autumn night, when the wind was sighing through the sedges, and the moon was half-hidden by a cloud, Hakuga heard the magic strains begin, and, when they ceased, he heard the player exclaim, "Alas! that there should be none to whom I might hand on this precious possession!" Thereupon Hakuga took courage. He entered the hermitage, prostrated himself, declared his name and rank, and humbly implored to be received by Semi as his disciple. This Semi consented to, and gradually revealed to him all the innermost recesses of his art.—According to Mr. E. H. Parker, this story, like many another Japanese story, is but the echo of a far older Chinese tradition. But whether true or false, whether native or foreign, it is a favourite motive with Japanese painters.

Undoubtedly authentic, and very different in its tenor, is the tale of Katō Tamikichi, a manufacturer of porcelain at the beginning of the eighteenth century. His master, Tsugane Bunzaemon, who owned a kiln in the province of Owari, envied the skill of the Karatsu porcelain-makers in the use of blue and white, and was determined to penetrate their secret. Accordingly he succeeded in arranging a marriage between one of his pupils, Katō Tamikichi, and the daughter of the chief of the Karatsu people. Katō, thus taken into the family in so distant a province, was regarded as one of themselves and admitted into their fullest confidence. Things went on quietly for years, during which he became the father of several children. At last, one day, Katō expressed a longing desire to revisit the scenes of his childhood and to enquire after his old master. Nothing doubting, the Karatsu people let him go. But when he reached Owari, he disclosed to his former master all that he had learnt at Karatsu, the consequence of which was that Owari porcelain was greatly improved, and obtained an immense sale in the

neighbouring market of Ōsaka, the richest in the empire. When this came to the ears of the Karatsu people, they were so much enraged that they caused Katō's wife and children to be crucified. He himself died a raving lunatic.

Since the latter part of the Middle Ages, the general prevalence among the upper classes of luxury, idleness, and a superstitious veneration for the past, even in trivial matters, together with a love of mystery, produced the most puerile whims. For instance, the court nobles at Kyōto kept to themselves, with all the apparatus of esotericism, the interpretation of the names of three birds and of three trees mentioned in an ancient book of poetry called the *Kokinshū*. No sacrament could have been more jealously guarded from impious hands, or rather lips. But when the great scholar, Motoori, disdaining all mumbo-jumbo, brought the light of true philological criticism to bear on the texts in question, lo and behold! one of the mysterious birds proved to be none other than the familiar wagtail, the second remained difficult to fix accurately, and the third name was not that of any particular species, but merely a general expression signifying the myriad little birds that twitter in spring. The three mysterious trees were equally commonplace.

Foolish as the three bird secret was (and it was but one among a hundred such), it had the power to save the life of a brave general, Hosokawa Yūsai, who, being besieged in A.D. 1600 by a son of the famous ruler Hideyoshi, was on the point of seeing his garrison starved into a surrender. This came to the ears of the Mikado; and His Majesty, knowing that Hosokawa was not only a warrior, but a learned man, well-versed in the mysteries of the *Kokinshū*—three birds and all—and fearing that this inestimable store of erudition might perish with him and be lost to the world for ever, exerted his personal influence to such good effect that an edict was issued commanding the attacking army to retire.

Viewed from a critical standpoint, Chinese and Japanese esoterics well deserve thorough investigation by some competent hand. We ourselves do not think that much would be added thereby to the world's store of wisdom. But we do think that a flood of light would be shed upon some of the most curious nooks and crannies of the human mind.

**Eta.** The origin of the *Eta*, or Japanese pariahs, is altogether obscure. Some see in them the descendants of Korean captives, brought to Japan during the wars of the latter part of the sixteenth century. By others they are considered to be the illegitimate descendants of the celebrated generalissimo Yoritomo, who lived as far back as the twelfth century. Even the etymology of the name is a subject of dispute among the learned, some of whom believe it to be from the Chinese characters 穢多 *e-ta*, "defilement abundant," while others derive it from *e-tori* 餌取, "food-catchers," in allusion to the slaughtering of cattle and other animals, which, together with skinning such animals, digging criminals' graves, and similar degrading occupations, constituted their means of livelihood. We ourselves incline to date back the first gradual organisation of the *Eta* as a separate class to a very early period—say the seventh or eighth century—when the introduction of Buddhism had caused all those who were connected in any way with the taking of life to be looked on with horror and disdain. They lived apart, generally on the outskirts of towns or villages, and governed by their own headmen; for the spirit of elaborate organisation pervading old Japanese society penetrated even to the dregs. There were three chiefs of the *Eta*, who resided at Yedo, Ōsaka, and Kyōto. Danzaemon, the Yedo chief, was privileged to wear two swords. Besides the *Eta* proper, there were the *Bantarō* or watchmen, and the *Kawaru-mono* or vagrants, who travelled about as strolling players. Some trace to these the origin of the modern theatre.

The legal distinction between the *Eta* and other persons of the

lower orders was abolished on the 12th October, 1871, at which time the official census gave 287,111 as the number of *Eta* properly so-called, and 982,800 as the total number of outcasts of all descriptions. Scorn of the *Eta* has naturally survived the abolition of their legal disabilities. It is a favourite theme of contemporary novelists, one of whom, Enchō, has excellently adapted the plot of Wilkie Collins's *New Magdalen* to the Japanese life of our day, by substituting for the courtesan of the English original a girl who had degraded herself by marrying an *Eta*.

**Books recommended.** *Land Tenure and Local Institutions in Old Japan*, by Simmons and Wignore, in Vol XIX, Part I. of the "Asiatic Transactions." *The Eta Maiden and the Hatamoto*, in Vol I. of Mitford's "Tales of Old Japan."

**Eurasians.** Half-castes are often called Eurasians, from their being half-Europeans and half-Asiatics or *Asians*. Eurasians usually resemble the Japanese mother rather than the European father, in accordance with the general physiological law whereby the fair parent gives way to the dark. The time that has elapsed since Japanese Eurasians began to be numerous is not long enough to inform us whether this mixed race will endure, or whether, as so often happens in such cases, it will die out in the third or fourth generation.

**Exterritoriality.** Exterritoriality, or extra-territoriality, as it is called by extra-particular speakers, is the exemption of the foreigners residing in a country from the jurisdiction of the law-courts of that country. This exemption exists both in China and Japan. Thus, if an Englishman commits a theft, he is tried, not by a Japanese judge, but by the nearest British consular court. In civil cases where one party is a Japanese and the other a foreigner, the suit is carried into the court of the defendant's nationality. If I want to sue a Japanese, I must sue him in a Japanese court; but a Japanese sues me in the British court. A corollary to this is that the interior of Japan remains closed to foreign residence and foreign trade,—even to foreign travel except with passports,—it being evidently

undesirable that a country should harbour persons not amenable to its laws. Foreigners are therefore restricted to Yokohama, Kōbe, and the other "Treaty Ports."

Exterritoriality, claimed thirty years ago as the only *modus vivendi* which could render the existence of civilised Christian beings endurable in the Japan of those days, has since then been violently assailed by some as unjust to Japan, whose independent sovereign rights it is held to infringe. Thus, the partisans of extrterritoriality found their arguments on alleged practical utility, whereas its opponents reason deductively from considerations of abstract right. Meantime, in view of Japan's frank adoption of European culture, the controversy has been closed by surrender on the foreign side. According to treaties recently concluded, all foreigners will come under Japanese law about the close of the century.

**Fairy-Tales.** The Japanese have plenty of fairy-tales; but the greater number can be traced to a Chinese, and several of these again to a Buddhist, that is, to an Indian, source. Among the most popular are *Urashima*, *Momotarō*, *The Battle of the Monkey and the Crab*, *The Tongue-Cut Sparrow*, *The Mouse's Wedding*, *The Old Man who Made the Trees to Blossom*, *The Crackling Mountain*, and *The Lucky Tea-Kettle*.

Though it is convenient to speak of these stories as "fairy-tales," fairies properly so-called do not appear in them. Instead of fairies, there are goblins and devils, together with foxes, cats, and badgers, possessed of superhuman powers for working evil. We feel that we are in a fairy-land altogether foreign to that which gave Europe "Cinderella" and "Puss in Boots,"—no less foreign to that which produced the gorgeously complicated marvels of the "Arabian Nights."

**Books recommended** *The Japanese Fairy-Tale Series*, published by Hasegawa, Tōkyō.—Mitford's *Tales of Old Japan*, latter part of Vol. I.—Griffis's *Japanese Fairy World*.—*Olden Times Tales for Little People*.

**Fans.** Incidental mention of fans occurs in the oldest official annals of the country. Thus, under date 768 A.D., we read of

Imperial permission being granted to a courtier to bring his staff and fan into the palace precincts, on the score of age and infirmity. Apparently fans were then tabooed by strict etiquette, which is remarkable, as they afterwards became an indispensable adjunct of Court dress for both sexes.

Fans are of two kinds,—two chief kinds, that is, for there is an immense number of minor varieties,—the round fan not capable of being shut (*uchuwa*), and the folding fan (*ōgi* or *sensu*). The fans of early days would seem to have been all of the non-folding type,—no wonder, seeing that the first natural fan was a palm-leaf. The Japanese pride themselves on being the inventors of the folding fan, which they assert to have been borrowed from them by the Chinese as late as the time of the Ming dynasty (1368-1644). A noble lady, widow of the youthful hero Atsumori,\* is credited with the idea. At the temple of Miedō in Kyōto, whither she had retired to hide her grief under the garb of a nun, she cured the abbot of a fever by fanning him with a paper folding fan, over which she muttered incantations; and to the present day the priests of this temple are considered special adepts in the manufacture of fans, whence the name of Miedō adopted by many fan-shops all over the country.

Of the less common varieties of the fan, perhaps the strangest are the giant kinds carried at the festival of the Sun-Goddess in Ise and by the firemen of Kyōto, and especially the war-fans formerly used by military commanders to direct with and give force to their orders. Iron was the material usually employed, and the ornamentation consisted on one side of a red sun on a gold ground, and on the other of a silver moon and stars on a black or dark blue ground. Ordinary fans are made of paper pasted over split bamboo. Japanese fans excel in cheapness as in elegance, ten cents being the usual price for a folding fan, three or four cents for one of the non-folding

---

\* For an outline of Atsumori's touching story, see Murray's "Handbook to Japan," 4th edit., p. 60, under the heading *Kumagae Naosane*.

kind. Fans are used as bellows ; they are even used as trays to hand things on. A man of the lower class will often hold a partially opened fan in front of his mouth when addressing a superior, so as to obviate the possibility of his breath or spittle defiling the superior's face ; but to fan oneself vigorously in the presence of a superior is not good manners.

To attempt a description of the quaint and poetical conceits with which Japanese fan-makers adorn their wares, would be to embark on a list of almost all the art-motives of the country ; for nearly all are made to contribute. The little picture is often accompanied by a verse of poetry in black or gold letters, or else there is only the poetry and no picture.

Fans have been extensively used as vehicles for advertisements ; but the Japanese advertiser of the older school generally disarmed criticism by the, so to say, apologetic moderation with which he practised that most detestable of all arts or rather artifices. In these *fin de siècle* days, however, when Europeanisation has corrupted everything, one has much to suffer from while fanning oneself on a hot day. Art has surely sounded its lowest depths when it comes to portraying a lager-beer bottle on one side of a fan, and to providing a railway time-table on the other.

**Books recommended.** *Fans of Japan*, by Mrs. Salwey ; also paper by the same in Vol. II. of the *Transactions of the Japan Society*

**Fashionable Crazes.** Japan stood still so long that she has now to move quickly and often, to make up for lost time. Every few years there is a new craze, over which the nation, or at least that part of the nation which resides in Tōkyō, goes wild for a season. 1873 was the rabbit year. There had been none of these little rodents in Japan. Hence, when imported as curiosities, they fetched incredible prices, as much as \$1,000 being sometimes paid for a single specimen. Speculations in \$400 and \$500 rabbits were of daily occurrence. In the following year, 1874, the government put a capitation

tax on rabbits, the price fell in consequence from dollars to cents, and the luckless rabbit-gamblers were ruined in a moment. 1874-5 were the cock-fighting years. In 1882-3, printing dictionaries and other works by subscription was the order of the day. Many of these literary enterprises turned out to be fraudulent, and had to be dealt with by the courts. About 1888 was also the great time for founding societies, learned and otherwise. Next came athletics in 1884-5. A rage for waltzing and for gigantic funerals marked 1886-7. During these years there was also, in official circles, an epidemic of what was locally known as "the German measles." The following year set mesmerism, table-turning, and planchette in fashion; and 1888 lifted wrestling from a vulgar pastime to a fashionable craze in which the then prime minister, Count Kuroda, led the way. 1889 saw the sudden rise of joint-stock-companies, together with a general revival of all native Japanese amusements, Japanese costume, anti-foreign agitation, etc. This was the great year of reaction. 1890 and following years, —railway speculation. 1893, the whole nation went mad over Colonel Fukushima's successful ride across Siberia. A perusal of the newspapers of the time alone can give any idea of the popular frenzy. 1896, Stamp-collecting.

**Festivals.** The holidays observed officially are :—

JAN. 1, 3, 5.—New Year.

JAN. 30.—Death of Kōmei Tennō, the late Mikado, A.D. 1867.

FEB. 11.—Accession of Jimmu Tennō, the first Mikado, B.C. 660. Promulgation of the Constitution, A.D. 1889.

MARCH 21.—Spring Festival of the Imperial ancestors,—an adaptation of the Buddhist *Higan*, or Equinoctial festival of the dead, who are supposed to cross the ocean of existence and reach the other (*hi*) shore (*gan*), that is, Nirvāna.

APRIL 3.—Death of Jimmu Tennō.

SEPT. 23.—Autumn Festival of the Imperial ancestors.

OCT. 17.—Offering of first-fruits to the Shintō gods.

Nov. 3.—Birthday of the reigning Emperor.

Nov. 23.—The Emperor tastes the first-fruits offered to his ancestors.

The observance of most of these holidays is as modern as the flags that are flown and the salutes that are fired in their honour. The occasions of them may serve as a measure of the all-engrossing importance of the Imperial House since the revolution. There is another set of holidays of more ancient institution, which, though perhaps less observed year by year, still live on in the thoughts and usages of the people, and especially in their dinners, as the defeat of the Spanish Armada does in our English Michaelmas goose. The chief dates are as follows, and it is most convenient to begin the enumeration, *more Japonico*, at the end :—

Dec. 13.—This day is called *Koto-hajime*, that is, “the beginning of things,” because such preparations for New Year as house-cleaning, decorating, and the pounding of rice for cakes (*mochi*), are then taken in hand. People eat *o-koto-jiru* on this day,—a kind of stew whose ingredients are generally red beans, potatoes, mushrooms, sliced fish, and a root called *konnyaku*. Presents of money are made to servants by their masters at this time of year. Both the season in question and the presents then given are termed *o seibo*.

Dec. 22.—The winter solstice (*tōji*). Doctors then worship the Chinese Esculapius.

Jan. 1-3.—Termed the *San-ga-nichi*, or “three days” of New Year, when the people eat a stew called *zōni*. In Tokyo this stew consists of rice-cakes, and greens boiled in fish gravy. Gateways are decorated at New Year with pine-branches, straw-ropes, oranges, and a lobster (the latter symbolising old age because of its crooked back), and presents are given called *o toshi-dama*.

Jan. 7.—This day is termed *Nana-kusa*, or the Seven Herbs, because in early timesthe Court and people used then to go out

to pluck parsley and six other edible herbs,—a custom to which the poets make frequent allusion. Rice-gruel, or congee flavoured with greens, is the appropriate dish. (About the 9th January, the people resume their ordinary work.)

JAN. 15-16.—The end of the New Year holidays. The 16th is the *Hōkōnin no Yudo-iri*, or Prentices' Holiday Home. Rice-gruel mixed with red beans is eaten.

JAN. 20.—*Kura-biraki*, that is, the day on which godowns are first opened. This is, however, more a name than a fact. *Zōni* is the dish of the day.

*Setsubun* is the name of a movable feast occurring sometimes late in January, sometimes early in February, on the eve of the first day of spring, Old Calendar. Beans are scattered about the house on the evening of this day in order to scare away demons, and of these beans each person present eats one more than the number of the years of his age.

*N. B.* *Azuki-meshi*, that is, rice mixed with red beans, is eaten on the 1st, 15th, and 28th of each month, these being the so called *san-jitsu*, or "three days." On the 30th, people eat buckwheat vermicelli (*misoka-soba*).

The First Day of the Horse (*Hatsu-uma*) in FEBRUARY, consequently a movable feast. This day is sacred to the Fox-Goddess Inari. For the little that is known of this deity, see *Murray's Handbook of Japan*, 4th edit., pp. 43 and 308.

MARCH 3.—The Girls' Festival (*Jōmi no Sekku*), when every town is decked out with dolls. It is also called *Hina Matsuri*, that is, the Feast of Dolls. A sweet drink called *shiro-zake* is partaken of on this day.

MARCH 17.—This and the next six days are the already mentioned great Buddhist equinoctial festival of *Higan*. On the actual day of the equinox, the sun is believed to whirl round and round at sunset.

APRIL 8.—Buddha's Birthday. Images of the infant Buddha (*Tanjō-Shaka*) are set up in the temples for worshippers to pour liquorice tea (*ama-cha*) over with a ladle. This tea is then

bought, and either partaken of at home in order to kill the worms that cause various internal diseases, or placed near the pillars of the house to prevent ants and other insect pests from entering.

MAY 5.—The Boys' Festival (*Tango no Sekku*), when such warlike toys as bows and arrows are sold, and gigantic paper fishes are flown from the houses, as explained on p. 83. Except New Year, this is of all Japanese festivals the one whose outward signs are most effective.

JUNE 22.—*Geshi*, or the summer solstice.

JULY 7.—*Tanabata*. The idea of this festival is most poetical. See last paragraph of the article on SUN, MOON, and STARS.

JULY 13-16.—This is the great Buddhist festival of *Bon*, which is often termed by foreigners the Feast of Lanterns, but might better be rendered as All Souls' Day. The spirits of dead ancestors then visit the altar sacred to them in each household, and special offerings of food are made to them. The living restrict themselves to *maigre* dishes as far as possible. The ceremony of "opening the river" (*kawa-biraki*), as it is called, generally takes place in Tōkyō about this time. The spectacle is a delightful one. Half the town goes out on the River Sumida in boats gaily decked with lanterns, while fireworks and music add to the gaiety of the evening. The rural population of most parts of the empire celebrate the festival by a dance known as *Bon-odori* (see p. 103). It is usual for masters to fee their servants at the *Bon* season. This should be done not later than the 13th.

JULY 16.—A second Prentices' Holiday.

The *Doyō no Iri*, or "First of the Dog-days," and the *Doyō Saburō*, or "Third Dog-day," are kept by the eating of peculiar cakes. The third dog-day is considered by the peasantry a turning-point in the life of the crops. Eels are eaten on any day of the Bull (*Doyō no Ushi*) that may occur during this period of greatest heat.

SEPTEMBER 9.—The *Chōyō no Sekku*, a holiday whose appropriate dish is rice mixed with chestnuts.

SEPTEMBER 20th.—The autumn equinox.

OCTOBER 20th.—The festival of *Ebisu-kō*, so called after one of the Gods of Luck, the only one of all the eight million deities to remain at large during October, which is called the "godless month" (*Kami-na-zuki*), because all the other gods then desert their proper shrines, and go off to the great temple of Izumo. The reason for Ebisu's not accompanying them is that, being deaf, he does not hear their summons. On this day tradesmen sell off their surplus stock, and give entertainments to their customers, correspondents, etc., as an amends—so it is half-jocularly said—for cheating them during the rest of the twelvemonth. At present, when all such antique customs are falling into desuetude, the 20th October has come to be regarded rather as a day for what are called *konshinkwai*—social gatherings, that is, of the members of a guild, political coterie, learned society, and so forth.

NOVEMBER has several Shintō festivals. The most notable of these, held in honour of the Goddess of the Kitchen-range (*Hettsui no Kumi*), and termed *Fuigō Matsuri*, or the Feast of Bellows, takes place on the 8th. Fires are then also lighted in honour of Inari and other deities in the courts of Shintō temples,—the reason, so far as Inari is concerned, being the assistance rendered by that deity to the famous sword-smith Kokaji, for whom she blew the bellows while he was forging a sword for an ancient Mikado.

NOVEMBER 15.—This is the day on which children who have reached the age of three are supposed to leave off having their heads shaved. It is accordingly called *Kami-oki*, that is, "hair-leaving," but corresponds to no actual reality, at least in modern times. The *Kazuki-zome*, or "first veiling" of girls aged five, and the *Hakama-gi*, or "first trowsering" of boys

aged five, formerly took place on the same day ; but these also are now empty names.

DEC. 8.—The *Hari no Kuyō*, a festival at which women repose themselves from the constant use of the needle by entertaining the other members of the household,—they, and not the men, directing matters for the nonce.

Thus ends the year. The adoption of the European calendar in 1873 tended to disorganise the old Japanese round of festivals ; for with New Year coming five or six weeks earlier than formerly, the association of each holiday with a special season was destroyed. How go out and search for spring herbs on the 7th January, when winter weather is just beginning, instead of showing signs of drawing to an end ? Confronted with this difficulty, usage has vacillated. For the most part the old *date* has been retained, notwithstanding the change thus caused in the actual *day*. To take the instance just alluded to, the 7th of the 1st moon, which would formerly have fallen somewhere about the middle or end of February, is retained as the 7th January. In other cases the actual day is retained, irrespective of the date to which it may correspond in the new calendar ; but this entails a fresh calculation every year, the old calendar having been lunar and irregular in several respects, not simply a fixed number of days behind ours, as, for instance, the Russian calendar is. A third plan has been to strike an average, making the date of each festival exactly one month later than formerly, though the actual day becomes about a fortnight earlier. Thus the festival of the 7th day of the 7th moon, Old Style, is in some places celebrated on the present 7th August, though really falling somewhere about the 20th August, if the calculation be properly worked out. Energetic holiday-makers will even celebrate the same festival twice,—first according to the new calendar and then according to the old, so as to be sure of keeping on good terms with the invisible powers that be. Altogether, there is great confusion and discrepancy of usage, each place being a law unto itself.

The list given above does not of course pretend to be exhaustive. There are local as well as general festivals, and these local festivals have great importance in their special localities. Such are the *Gion* festival at Kyōto, and the *Sannō* and *Kanda* festivals at Tōkyō. *Gion* and *Sannō* take place in the middle of July, *Kanda* in mid-September. All three are distinguished by processions, of which the chief feature is a train of triumphal or rather mythological cars, called *dashi* by the Tōkyō people, *yuma* or *hoko* by the people of Kyōto. These cars have have recently been reduced in height, because they were found to interfere with the telegraph, telephone, and electric light wires that now spread their web over the great cities.

**Book recommended.** *Astrologia Giapponnese*, by Antelmo Severini, gives details that may interest the student of folk-lore and superstitions.

**Filial Piety.\*** Filial piety is the virtue *par excellence* of China and Japan. From it springs loyalty† which is but the childlike obedience of a subject to the Emperor, who is regarded, in Chinese phrase, as “the father and mother of his people.” On these two fundamental virtues the whole fabric of society is reared. Accordingly, one of the gravest dangers to Japan at the present time arises from the sudden importation of our less patriarchal Western ideas on these points. The traditional basis of morality is sapped.

There are no greater favourites with the people of Japan than the “Four-and-Twenty Paragons of Filial Piety” (*Ni-jū-shi Kō*), whose quaint acts of virtue Chinese legend records. For instance, one of the Paragons had a cruel stepmother who was very fond of fish. Never repining at her harsh treatment of him, he lay down naked on the frozen surface of a lake. The warmth of his body melted a hole in the ice, at which two carp came up to breathe. These he caught and set before his

---

\* In Japanese, *kō*, or more popularly, *oya kōkō*.

† In Japanese, *chū* or *chūshin*.

stepmother. Another Paragon, though of tender years and having a delicate skin, insisted on sleeping uncovered at night, in order that the mosquitoes should fasten on him alone, and allow his parents to slumber undisturbed. A third, who was very poor, determined to bury his own child alive, in order to have more food wherewith to support his aged mother, but was rewarded by heaven with the discovery of a vessel filled with gold, on which the whole family lived happily ever after. A fourth, who was of the female sex, enabled her father to escape, while she clung to the jaws of the tiger which was about to devour him. But the drollest of all is the story of Rōraishi. This Paragon, though seventy years old, used to dress in baby's clothes and sprawl about upon the floor. His object was piously to delude his parents, who were really over ninety years of age, into the idea that they could not be so very old after all, seeing that they had such a puerile son.

Those readers who wish to learn all about the remaining nineteen Paragons should consult Anderson's *Catalogue of Japanese and Chinese Paintings*, page 171, where also an illustration of each is given. The Japanese have established a set of "Four-and-Twenty Native Paragons" (*Honchō Ni-jū-shi Kō*) of their own, but these are less popular.

The first question a European will probably ask on being told of the lengths to which filial piety is carried in the Far-East, is: how can the parents be so stony-hearted as to think of allowing their children thus to sacrifice themselves? But such a consideration never occurs to a Chinese or Japanese mind. That children should sacrifice themselves to their parents is, in the Far-Eastern view of things, a principle as indisputable as the duty of men to cede the best of everything to women is with us. Far-Eastern parents accept their children's sacrifices much as our women accept the front seat—with thanks perhaps, but as a matter of course. No text in the Bible raises so much prejudice here against Christianity as that which commands a man

to leave his father and mother, and cleave to his wife. "There! you see it," exclaims the anti-Christian Japanese, pointing to the passage, "I always said it was an immoral religion."

**Fires** were formerly so common in Japan's wood and paper cities, that the nickname of "Yedo Blossoms" was applied to the flames which in winter almost nightly lit up the metropolis with fantastic lustre. So completely did this destructive agency establish itself as a national institution, that a whole vocabulary grew up to express every shade of meaning in matters fiery. The Japanese language has special terms for an incendiary fire, an accidental fire, a fire starting from one's own house, a fire caught from next door, a fire which one shares with others, a fire which is burning to an end, the flame of a fire, anything—for instance, a brazier—from which a fire may arise, the side from which to attack a fire in order to extinguish it, a visit of condolence after a fire, and so on. We have not given half.\* Were all records except the linguistic record destroyed, one would still be able to divine how terrible an enemy fire had been to Japanese comfort and Japanese antiquities. Fire insurance, be it observed, was *not* among the words connected with fire in Old Japan. It dates only from the new régime, being Europe's contribution to the vocabulary. But of course the practice of fire insurance can gain ground but slowly; for what capitalists will find it worth their while to assume risks so heavy, even supposing the people, who are mostly poor and who grudge actual expenditure in the present for a problematical return in the future, to be willing purchasers of policies?

To Ōoka, the Japanese Solomon, who was mayor and judge of Yedo early in the eighteenth century, belongs the credit of having organised the fire-brigades which formed so useful and picturesque a feature of Yedo life. Since his day, fire engines

---

\* Here are the Japanese originals of the above terms, for the benefit of the curious: *tsukebi*, *sosōbi*, *fukwa*, *moraibi*, *ruishō*, *shitabi*, *hinote*, *huno-moto*, *keshi-kuchi*, *kwaji-nimai*. Fire insurance, mentioned just below, is *kwasai-hoken*.

of European make have been brought into use. Moreover, the number of conflagrations has been much diminished of late years by the gradual introduction of stone and brick buildings and of wider streets, and by stricter police control. Even, therefore, granting the possible truth of the popular assertion that in some parts of Tōkyō houses were only expected to survive three years, that state of things happily belongs to the past. Still, fire is an ever-dreaded foe. It is a foe at whose entry into the city the carpenters, unless they are greatly maligned, have frequently connived, because it brings them work; and the peculiar dress and antics of the firemen are things which no visitor to Japan should miss a chance of seeing. Every year, on the 4th January, the firemen parade the streets with their tall, light ladders, and give a gymnastic performance gratis.

The most famous of all the many great Yedo fires was that of 1657, when nearly half the city was destroyed and over 107,000 persons are said to have perished in the flames. The government undertook the necessary gigantic interment, for which the grounds of what is now known as the temple of Ekō-in were selected, and priests from all the Buddhist sects were called together to hold a seven days' service for the benefit of the souls of the departed. Wrestling-matches are now held in the same place,—a survival apparently of festivals formerly religious, which consisted in bringing holy images from the provinces to be worshipped awhile by the Yedo folk and thus collect money for the temple, which could not rely on the usual means of support, namely, gifts from the relations of the dead, the fire of 1657 having been so destructive as to sweep away whole families. The occurrence of every great fire in Tōkyō is now wisely availed of in connection with a fixed plan of city improvement, involving new thoroughfares and the widening of old ones.

**Flag.** The Japanese national flag (*Hi-no-Maru*) is a good instance of Amiel's axiom that "nothing real is simple." The

sun upon a background,—why should not the idea have been hit upon at once by the inhabitants of this “Land of the Rising Sun?” And yet, when we come to look into the matter, we find this apparently obvious result to have been evolved from a strangely complicated set of ideas, slowly changing through the centuries.

It seems that, from time immemorial, the Chinese Court and army had made use of banners adorned with figures founded on astrological fancies,—the Sun with the Three-legged Crow that inhabits it, the Moon with its Hare and Cassia-tree, the Red Bird representing the seven constellations of the southern quarter of the zodiac, the Dark Warrior (a Tortoise) embracing the seven northern constellations, the Azure Dragon embracing the seven eastern, the White Tiger embracing the seven western, and a seventh banner representing the Northern Bushel (Great Bear). The banners of the Sun and Moon assumed special importance, because the Sun was the Emperor's elder brother and the Moon his sister, for which reason he himself was and still is styled the Son of Heaven,—no mere metaphors these to the early Chinese mind, which implicitly believed that the Emperor's conduct could influence the course of the seasons.

The Japanese took over these things wholesale,—Imperial title, banners, mythological ideas, and all,—probably in the seventh century, for the official annals incidentally record their use in A.D. 700. In process of time most of the elements of this system were dropped, only the Sun and Moon Banners being retained as Imperial insignia, but without their fabulous inmates, though the Sun Crow and the Moon Hare still linger on in art. For such heathen fancies mediæval piety substituted effigies of the gods or an invocation to Buddha; but these, too, were dropped when Buddhist influence declined. Thus the sun (not originally a Rising Sun) alone remained; and when, in 1859, a national flag corresponding to those of Europe became necessary, the Sun Banner naturally stepped into the vacant place. A

more elaborate design,—the sixteen-petalled chrysanthemum, which is apparently only in another shape the sun with its rays, became fixed as the Imperial standard; for conformity to European usage prescribed such a distinction. The military flag with its sixteen rays is a modification of the same idea, the number sixteen itself being traceable to Chinese geomantic notions.

**Book recommended.** The above article is condensed from a beautifully illustrated paper by Mr. W. G. Aston, in Vol. XXII. of the "Asiatic Transactions."

**Flowers.** An enemy has said that Japanese flowers have no scent. The assertion is incorrect; witness the plum-blossom, the wild rose, and the many sweet-smelling lilies and orchids. But granting even—for the sake of argument, if for nothing more—that the fragrance of flowers greets one less often in Japan than at home, it must be allowed on the other side that the Japanese show a more genuine appreciation of flowers than we do. The whole population turns out several times in the year for no other purpose than to visit places which are noted for certain kinds of blossoms. It is round these that the national holiday-makings of the most holiday-loving of nations revolve, and no visitor to Japan should fail to see one or other—all, if possible—of these charming flower festivals. The principal flowers cultivated in Tōkyō are:—the plum-blossom, which comes into flower about the end of January, and lasts on into March; the cherry-blossom, first half of April; the tree-peony, end of April or beginning of May; the azalea, early in May; the wistaria, ditto; the iris, early in June; the convolvulus, end of July and beginning of August; the lotus, early in August; the chrysanthemum, first three weeks of November; the maple (for such bright leaves are included under the general designation of flowers), all November.

The Japanese care but little for some flowers which to Europeans commend themselves as the fairest, and they make

much of others which we should scarcely notice. All sorts of considerations come into play besides mere "look-see" (if we may for once be allowed to use a convenient Pidjin-English term). The insignificant blossom of the straggling lespedeza shrub is a favourite, on account of ancient poetic fables touching the amours of the lespedeza, as a fair maiden, and of the stag her lover. The camellia is neglected, because it is considered unlucky. It is considered unlucky, because its red blossoms fall off whole in a way which reminds people—at least it reminds Japanese people—of decapitated heads. And so on in other cases. Of wild-flowers generally the Japanese take little account, which is strange; for the hills and valleys of their beautiful country bear them in profusion.

A very curious sight is to be seen at Dango-zaka in Tōkyō at the proper season. It consists of chrysanthemums worked into all sorts of shapes,—men and gods, boats, bridges, castles, etc., etc. Generally some historical or mythological scene is portrayed, or else some tableau from a popular drama. There, too, may be seen very fine natural chrysanthemums, though not quite so fine as the *élite* of Tōkyō society is admitted to gaze on once a year in the beautiful grounds of the old palace at Akasaka. The mere variety is amazing. There is not only every colour, but every shape. Some of the blossoms are immense,—larger across than a man's hand can stretch. Some are like large snow-balls,—the petals all smooth, and turned in one on the top of the other. Others resemble the tousled head of a Scotch terrier. Some have long filaments stretched out like star-fish, and some, as if to counterbalance the giants, have their petals atrophied into mere drooping hairs. But the strangest thing of all is to see five or six kinds, of various colours and sizes, growing together on the same plant—a nosegay with only one stem—the result of judicious grafting. Of the *same* kind of blossoms, as many as a thousand and fifty-eight have been known to be produced on one plant! In other cases the triumph is just the

opposite way. The whole energies of a plant are made to concentrate on the production of a single blossom! A tawny, dishevelled monster, perhaps, called "Sleepy Head" (for each variety has some quaint name), or else the "Golden Dew," or the "White Dragon," or the "Fisher's Lantern"—a dark russet this—or the "Robe of Feathers," a richly clustering pink and white, or, loveliest of all, the "Starlit Night"—a delicately fretted creature, looking like Iceland moss covered with hoar-frost. Such results are obtained only by the accumulated toil of years, and especially by care, repeated many times daily, during the seven months that precede the period of blossoming. Such care is amply rewarded; for the chrysanthemum is a flower which will last several weeks if duly sheltered from the early frosts.

Bouquet-making is not left in Japan, as it is in Europe, to individual caprice. Europeans are, in this respect, wild children of nature. The Japanese have made an art of it, not to say a science. Indeed, they invoke the aid of Confucianism itself, and arrange flowers philosophically, with due regard to the active and passive principles of nature, and in obedience to certain traditional rules which have been jealously handed down in the various flower-schools ever since Sen-no-Rikyū first set the art on its present basis in the sixteenth century of our era. It is well-worth the while of any curious inquirer to peruse Mr. Conder's beautifully illustrated work on this subject, though, to be sure, the whole gist of the matter may be given in half-a-dozen words:—a "floral composition" must consist of three sprays, the longest in the middle generally bent bow-like, a second half its length branching out on one side, and a third, a quarter of its length, on the other. To obtain proper curvature, the stems are heated over a brazier, or else kept in position by means of wires and other artifices. Whatever may be thought of the so-called flower *philosophy*, the reader will at least have gained acquaintance with a graceful and intricate art, and with

a curious chapter in the history of the human mind. Linear effect, and a certain balance or proportion achieved by means of studied irregularity, are the key-note and the dominant of Japanese floral compositions. The guiding principle is not harmony of colour.

An enthusiastic local critic, who is up to the ears in love with all things Japanese, opines that the Japanese linear arrangement of stems and leaves stands "at an unmeasurable height above the barbaric massing of colours that constitutes the whole of the corresponding art in the West." Such a verdict will scarcely find acceptance with those who esteem colour to be nature's most glorious gift to man, and the grouping of colours (unless we set above it the grouping of sounds in music) to be the most divine of human arts. Still, Japanese floral design offers a subject as charming as it is original. If not, as its more zealous and intolerant sectaries claim, *the way of treating flowers*, at least it is *a way*, a totally new way; and we are greatly mistaken if it and Japanese gardening do not soon make many European converts. The very flower-pots are delightful, with their velvety blue and white designs.

**Books recommended.** *The Flowers of Japan and the Art of Floral Arrangement*, by Josiah Conder. See also a preliminary article by the same author in Vol. XVII. Part II. of the *Asiatic Transactions*.—*The Garden of Japan*, by F. T. Piggott.

**Food.** Like most other nations, the Japanese take three meals a day—one on rising in the morning, one at noon, and one at about sunset. Much the same sort of food is partaken of at all these meals, but breakfast is lighter than the other two. The staple is rice—which is replaced by millet or some other cheap grain in the poorer country districts,—rice with fish and eggs, and vegetables either fresh or pickled. Beans, in particular, are in constant requisition.

Buddhism has left its impress here, as on everything in Japan. To Buddhism was due the abandonment of a meat diet, now over a thousand years ago. The permission to

eat fish, though that too entailed the taking of life, which is contrary to strict Buddhist tenets, seems to have been a concession to human frailty. Pious frauds, moreover, came to the rescue. One may even now see the term "mountain whale" (*yama-kujira*) written up over certain eating-houses, which means that venison is there for sale. The logical process is this:—A whale is a fish. Fish may be eaten. Therefore, if you call venison "mountain whale," you may eat venison. Of course no actual prohibition against eating flesh, such as existed under the old *régime*, obtains now. But the custom of abstaining from it remains pretty general; and though beef and pork were introduced at the time of the late revolution, the fondness for them soon waned, as did that for bread which was the rage among the lowest class in 1890. The piles of loaves then displayed at every little cook-stall in Tōkyō, for the delectation of jinrikisha-men and other coolies, have vanished and been replaced by victuals of the orthodox Japanese type. Probably the poor quality of the bread, and the nasty way in which the meat was cooked, had much to do with this return to the ancestral diet.

Of beverages the chief are tea, which is taken without sugar or milk, and *sake*, an alcoholic liquor prepared from rice, whose taste has been not inaptly compared to that of weak sherry which has been kept in a beer-bottle. It is generally taken hot, and at the *beginning* of dinner. Only when the drinking-bout is over, is the rice brought in. At a long dinner, one is apt never to reach it.

The following is a specimen of the bill of fare at a Japanese banquet. The reader must understand that everything is served in small portions, as each guest has a little table to himself, in front of which he squats on the floor:—

PRELIMINARY COURSE, served with *sake*:—*suimono*, that is, a kind of bean-curd soup; *kuchi-tori*, a relish, such as an omelette, or chestnuts boiled soft and sweet, or *kamaboko*,

which is fish pounded and then rolled into little balls and baked; *sashimi*, minced raw fish; *hachi-zakana*, a fine large fish, either broiled with salt or boiled with soy; *uma-ni*, bits of fish or sometimes fowl, boiled with lotus-roots or potatoes in soy and in a sort of liqueur called *mirin*; *su-no-mono*, sea-ears or sea-slugs served with vinegar; *chawan*, a thin fish soup with mushrooms, or else *chawan-mushi*, a thick custardy soup.

FIRST COURSE (*Zembu*):—*shiru*, soup which may be made of bean-curd, of fish, of sea-weed, or of some other material; *o-lura*, boiled fish, either alone or floating in soup; *tribo*, sea-weed or some other appetiser, boiled in a small deep bowl or cup; *namasu*, raw fish cut in slices, and served with vinegar and cold stewed vegetables; *aemono*, a sort of salad made with bean sauce or pounded sesamum seeds; *yakimono*, raw fish (although the name means “broiled”) served in a bamboo basket, but generally only looked at and not eaten; *kō-no-mono*, pickled vegetables, such as egg-plant, cabbage-leaves, or the strong-smelling radish (*daikon*), which is as great a terror to the noses of most foreigners as European cheese is to the noses of most Japanese.

SECOND COURSE (*Ni no zen*):—soup, raw fish (but only if none has been served in the first course), and rice.

Such banquets as the above are of course not given every day. At smaller dinners not more than half such a *menu* would be represented. Quiet, well-to-do people, living at home, may have a couple of dishes at each meal—a broiled fish perhaps, and some soup, or else an omelette, besides pickles to help the rice down with. The Oriental abstemiousness which figures so largely in travellers’ tales, is no part of real Japanese manners. To make up for the comparative lightness and monotony of their food, the Japanese take plenty of it. It is the custom, too, to set food before a guest, at whatever time of day he calls. On such occasions *soba* is in request—a sort of buckwheat

vermicelli, served with soy and the sweet liqueur called *mirin*; or else *shiruko*, that is, rice-cakes with a sauce made of red beans and sugar; or *sushi*, rice-cakes plastered over with fish or with seaweed on which vinegar has been sprinkled. Even when these things are not given—and among the Europeanised upper classes they are now mostly abandoned—tea and cakes are always set before every guest. Many of the Japanese cakes and sugar-plums are pleasant eating. They atone to some extent for the absence of puddings and for the singular poorness of Japanese fruit.

Japanese dishes fail to satisfy European cravings. If Dr. Johnson had ever partaken of such a dinner, he would surely have described the result as a feeling of satiety without satisfaction, and of repletion without sustenance. The food is clean, admirably free from grease, often pretty to look at. But try to live on it—no! The Japanese, doubtless, being to the manner born, prefer their own rice and other dishes for a continuance. At the same time, they do not object to an occasional dinner in European style and their appetite on such occasions is astonishing. Experts say that Japanese food, though poor in nitrogen and especially in fat, is rich in carbon, and amply sufficient to support life, provided the muscles be kept in action, but that it is indigestible and even deleterious to those who spend their time squatting on the mats at home. This accounts for the healthy looks of the coolies, and for the too often dyspeptic and feeble bodily habit of the upper classes, who take little or no exercise. A foreigner forced by circumstances to rely on a Japanese diet should, say the doctors, devote his attention to beans, especially to the bean-soup called *miso*. Fortunately of this dish—and of this only—custom permits one to ask for a second helping (*o kawari*).

There is a circumstance connected with Japanese dinners that must strike every one who has seen a refectory where numbers of students, monks, soldiers, or other persons under

discipline are fed,—the absence of clatter arising from the absence of knives and forks and spoons. A hundred boys may be feeding themselves with the help of chopsticks, and yet you might almost hear a pin drop in the room.

Most Japanese towns of any size now boast what is called a *seiyū-ryōri*, which, being interpreted, means a foreign restaurant. Unfortunately, third-rate Anglo-Saxon influence has had the upper hand here, with the result that the central idea of the Japano-European cuisine takes consistency in slabs of tough beefsteak anointed with mustard and spurious Worcester sauce. This culminating point is reached after several courses,—one of watery soup, another of fish fried in rancid butter, a third of chickens' drumsticks, stewed also in rancid butter; and the feast not infrequently terminates by what a well-known local cookery book, unhappily disfigured by numerous misprints, terms a "sweat omelette."

**Foreign Employés in Japan.** Since the day when Mendez Pinto discovered Japan in 1542, Western influence began to filter into the archipelago. Mosquito-nets date from then, and sponge-cake (called *kasuteira* from the word "Castille"), and of course Christianity. Would that all the Portuguese and Spanish visitors of those early days had been Christians in fact as well as in name,—humble, unworldly missionaries instead of adventurers! Japan was perfectly willing to be converted until she saw that conversion meant conquest, and thereupon shut her doors in their face. But for this circumstance, she might have entered the comity of Western nations three centuries ago, and have started nearly fair with them in the race of modern civilization. Next came the Dutch, whose useful influence is often underrated. To mention nothing else, it was they who weaned the Japanese from a pharmacopœia of dragons' teeth, snake-skins, and the like, and taught them at least the rudiments of anatomy and of a rational system of medicine.

But foreign influence became an overwhelming force only

when the country had been opened in 1854, indeed, properly speaking, only in the sixties. From that time dates the appearance in this country of a new figure—the foreign *employé*; and the foreign *employé* is the creator of New Japan. To the Japanese Government belongs the credit of conceiving the idea and admitting the necessity of the great change, furnishing the wherewithal, engaging the men, and profiting by their labours, resembling in this a wise patient who calls in the best available physician and assists him by every means in his power. The foreign *employés* have been the physician, to whom belongs the credit of working the marvellous cure which we all see. One set of Englishmen—at first a single Englishman, the late Lieut. A. G. S. Hawes,—took the navy in hand, and transformed junk manners and methods into those of a modern man-of-war. Another undertook the mint, with the result that Oriental confusion made way for a uniform coinage equal to any in the world. No less a feat than the reform of the entire educational system was chiefly the work of a handful of Americans. A Frenchman codified Japanese law, and abolished torture.\* Germans have for years directed the whole higher medical instruction of the country, and the larger steamers of the principal steamship company are still commanded by foreign captains of various nationalities. As we correct these sheets for the press, two English experts are busy reporting on British administrative methods in dealing with native races, in order to

---

\* This forward step was entirely due to the personal initiative of Monsieur Boissonnade de Fontarabie. Soon after his arrival in the country in 1873, when seated one day busy with the preliminaries for the work of codification, he heard groans in an adjoining apartment, and asked what they meant. An evasive answer was returned; but he persisted, and finally burst into the room whence the groans issued, to find a man stretched on the torture-boards with layers of heavy stones piled on his legs. Returning to his Japanese colleagues, he plainly told them that such horrors and civilised law could not coexist, that torture must cease instantly, or that he must resign. This firm stand brought about the immediate disuse of a practise so shocking to humanity. The sufferer—a young man accused of a political offence—afterwards rose to eminence as Count Mutsu, sometime Minister of Foreign Affairs.

place a model before the new rulers of Formosa. Again, consider the army which so recently astonished the world by the perfection of its organisation:—that organisation was German, and was drilled into the Japanese by German officers engaged for the purpose. The posts, the telegraphs, the railways, the trigonometrical survey, improved mining methods, prison reform, sanitary reform, cotton and paper mills, chemical laboratories, water-works, and harbour works;—all are the creation of the foreign *employés* of the Japanese Government. Nor must it be supposed that foreigners have been mere supervisors. It has been a case of off coats, of actual manual work, of example as well as precept. Technical men have shown their Japanese employers how to do technical things, the name of *chef de bureau*, captain, foreman, or what not, being no doubt generally painted on a Japanese figure-head, but the real power behind each little throne being the foreign adviser or specialist.

It is hard to see how matters could have been otherwise, for it takes longer to get a Japanese educated abroad than to engage a foreigner ready made. Moreover, even when technically educated, the Japanese will, for linguistic and other reasons, have more difficulty in keeping up with the progress of rapidly developing arts and sciences, such as most European arts and sciences are. Similar causes have produced similar results in other parts of the world, though on a smaller scale—in Spanish America, for example. The only curious point is that while Japanese progress has been so often and so rapturously expatiated upon, the agents of that progress have been almost uniformly overlooked. To mention but one example among many, the ingenious “Travelling Commissioner” of the *Pall Mall Gazette*, Mr. Henry Norman, in his lively letters on Japan published nine or ten years ago,\* tells the story of Japanese education under the fetching title of “A Nation at School;” but the impression left is that they have been their own school-

---

\* In 1892 they were republished in book form as *The Real Japan*.

masters In another letter on "Japan in Arms," he discourses concerning "the Japanese military re-organisers," the Yokosuka dockyard, and other matters, but omits to mention that the re-organisers were Frenchmen, and that the Yokosuka dockyard was also a French creation. Similarly when treating of the development of the Japanese newspaper press, he ignores the fact that it owed its origin to an Englishman, which surely, to one whose object was reality, should have seemed an item worth recording.

These letters, so full and apparently so frank, really so deceptive, are, as we have said, but one instance among many of the way in which popular writers on Japan travesty history by ignoring the part which foreigners have played. The reasons of this are not far to seek. A wonderful tale will please folks at a distance all the better if made more wonderful still. Japanese progress traced to its causes and explained by reference to the means employed, is not nearly such fascinating reading as when represented in the guise of a fairy creation sprung from nothing, like Aladdin's palace. Many good people enjoy nothing so much as unlimited sugar and superlatives; and the Japanese have really done so much that it seems scarcely stretching the truth to make out that they have done the impossible. Then, too, they are such pleasant hosts, whereas the foreign *employés* are not always inclined to be hosts at all to the literary and journalistic globe-trotter, who thirsts for facts and statistics, subject always to the condition that he shall be free to bend the facts and statistics to his own theories, and demonstrate to old residents that their opinions are simply a mass of prejudice. There is nothing picturesque in the foreign *employé*. With his club, and his tennis-ground, and his brick house, and his wife's piano, and the rest of the European *entourage* which he strives to create around him in order sometimes to forget his exile, he strikes a false note. The esthetic and literary globe-trotter would fain revel in a tea-tray existence for the nonce, because

the very moment he tires of it, he can pack and be off. The foreign *employé* cannot treat life so jauntily, for he has to make his living; and when a man is forced to live in Lotus-land, it is Lotus-land no longer. Hence an irreconcilable feud between the foreign *employés* in Japan and those literary gentlemen who paint Japan in the brilliant hues of their own imagination. For our part, we see no excuse—even from a literary point of view—for inaccuracy in this matter. Japan is surely fair enough, her people are attractive enough, her progress has been remarkable enough, for plenty of praise to remain, even when all just deductions are made and credit awarded to those who have helped her to her present position. Why exaggerate? Japan can afford to borrow Cromwell's word, and say, "Paint me as I am!"

**Forfeits.** The Japanese play various games of forfeits, which they call *ken*, sitting in a little circle and flinging out their fingers, after the manner of the Italian *mora*. The most popular kind of *ken* is the *kitsune ken*, or "fox forfeit," in which various positions of the fingers represent a fox, a man, and a gun. The man can use the gun, the gun can kill the fox, the fox can deceive the man; but the man cannot kill the fox without the gun, nor the fox use the gun against the man. This leads to a number of combinations. Another variety of the game of forfeits is the *tomo-se*, or "follow me," in which the beaten player has to walk round the room after the conqueror, with something on his back, as if he were the conqueror's baggage coolie. The dance called by foreigners "John Kino" is a less reputable member of the same family of games.\*

**Formosa.** The hazy geography of early times distinguished so imperfectly between Formosa and Luchu that it is often difficult to know which of the two is intended. Equally obscure is the early history of the island. The Chinese would seem to

---

\* "John Kino" seems to be a corruption of *chon ki-na* or *choi ki-na*, "just come here!"

have discovered it at the beginning of the seventh century, but the curtain falls again for over six hundred years. From the beginning of trustworthy records, the spectacle presented to us is that of a mountainous, forest-clad interior inhabited by head-hunting savages of Malay race, and a flat western sea-board overrun by buccaneers from various lands. A peculiar tribe of Chinamen, called Hakka, permanently settled this western coast during the fifteenth and sixteenth centuries; but the Portuguese, the Dutch, and the Spaniards, all of whom, about A.D. 1600, were striving together for colonial supremacy, endeavoured with partial temporary success to gain a foothold. The Japanese did likewise, both as peaceable traders and as pirates. *Takasago*, one of their names for Formosa, dates from that time, having been first applied to a sandy stretch which was thought to resemble the celebrated pine-clad beach of that name near the present town of Kōbe. The other Japanese, or rather Chinese, appellation—*Taiwan* ("terraced bay") was at first confined to one of the trading stations on the coast—to which, is not quite certain. Our European name comes from the Portuguese navigators, who, with somewhat exaggerated enthusiasm, called what they saw of the place *Ylla Formosa*, that is, the "Beautiful Island."

Dutch rule asserted itself as paramount over a large portion of Formosa from 1624 to 1661, and to Dutch missionaries we owe the first serious attempts at a study of the aborigines and their multifarious dialects. Several young Formosans were even sent to Holland to study theology, a circumstance which gave rise to one of the most audacious literary frauds ever perpetrated. A Frenchman, pretending to be a native convert, published, under the pseudonym of George Psalmanaazaar, "*An Historical and Geographical Description of Formosa*,"—every line of which, including an elaborate grammar, an alphabet, and a whole religious system, was pure invention, but which deceived the learned world almost down to our own day. The Dutch

were ousted from Formosa by Koxinga, the son of a Chinese pirate by a Japanese mother. But his rule was short-lived, and the island passed in 1683 under the control of the Chinese Government, which retained it until its cession to Japan, in 1895, as one of the conditions of peace after the war between the two nations. The aborigines had already incidentally felt the force of Japanese arms in 1874, when an expedition was sent under General Saigō to chastise them for the murder of some shipwrecked fishermen.

Formosa, as sufficiently indicated above, falls naturally into two distinct parts. To the west a low alluvial plain, richly cultivated by industrious Chinese living in towns and villages, slopes gently to the sea. Eastwards the country rises into mountain ranges covered with virgin forests of camphor laurel and other huge trees, beneath whose shade wild beasts and wild men fight for a subsistence. The cliffs of the east coast are the highest and most precipitous in the world, towering in places sheer six thousand feet from the water's edge.

It is not for nothing that so many nations have striven for the overlordship of Formosa. Tea, camphor, sugar, fruits and vegetables of every kind, are produced in immense quantities, while the store of metals has as yet scarcely been touched, but coal and gold are known to abound. But there are several indispensable preliminaries to the exploitation of these riches by their present enlightened owners. The aborigines must be subjugated, and not only they, but armed bands of Chinese rendered desperate by real and fancied grievances. Hitherto things have gone wrong with the Japanese attempt to colonise their new dependency. Month after month a clamour rises from the press of every shade of opinion and from public men anent the waste, the corruption, the misgovernment and malpractices of every kind that are there rampant. Foreigners tell exactly the same tale, adding details about the shameless lives led by officials and the insolence of the soldiery and

imported coolies, who, peasants for the most part at home, there get brevet rank as representatives of the conquering race. On all sides the cry is that a false start has been made, that what is needed is an entirely new departure, if this island—"Beautiful" but unhappy—is ever to have rest. That reform is earnestly laboured for at Tōkyō, we make no doubt, and from our hearts we wish it success. With road-building and the construction of railways and lighthouses, a beginning has already been made; the Japanese school system and the conscription law have been introduced. Evidently the official intention is that the incorporation of Formosa with the Japanese empire shall be no mere form of words, but, so far as may be, an actual assimilation of the conquered to the conquerors.

The foreign trade of Formosa is, excepting two or three German firms, almost entirely in British hands. In 1896,—even subsequent to the dislocating influences of war and rebellion, of the assumption of the opium monopoly by the Japanese government, and of vexatious interference with the camphor trade,—the British shipping in Formosan waters still amounted to over 86 per cent of the whole steam tonnage entered from abroad.

\* \* \* \* \*

It would not be possible at the present day, in however brief a sketch of Formosa, to omit all reference to the Rev Dr. Mackay, the pioneer missionary and author of the best general account of the land and its people. This truly good man will pardon us for saying that his book has not only interested and instructed, but amused us hugely. Never, in the wildest flight of imagination, could we have guessed the nature of the evangelising method on which he has chiefly relied,—tooth-drawing!!! "Toothache," writes he, "resulting from severe malaria and from beetle-nut chewing, cigar-smoking, and other filthy habits, is the abiding torment of tens of thousands of both Chinese and aborigines

“ . . . . Our usual custom in touring through the country  
 “ is to take our stand in an open space, often on the stone steps  
 “ of a temple, and, after singing a hymn or two, proceed to  
 “ extract teeth, and then preach the message of the gospel.  
 “ . . . . I have myself, since 1873, extracted over twenty-  
 “ one thousand, and the students and preachers have extracted  
 “ nearly half that number. . . . . The priests and other  
 “ enemies of the mission may persuade people that fever and  
 “ other diseases have been cured, not by our medicines, but by  
 “ the intervention of the gods ; but the relief from toothache is  
 “ too unmistakable, and because of this, tooth-extracting has  
 “ been more than anything else effective in breaking down  
 “ prejudice and opposition.”

**Books recommended.** *From Far Formosa*, by Rev Dr. Mackay—For elaborate historical details, Dr. L. Riess's *Geschichte der Insel Formosa*, published as Part 59 of the “German Asiatic Transactions”

**Forty-Seven Rōnins.** Asano, Lord of Akō, while at Yedo in attendance on the Shōgun, was entrusted with the carrying out of one of the greatest state ceremonies of those times,—nothing less than the reception and entertainment of an envoy from the Mikado. Now Asano was not so well-versed in such matters as in the duties of a warrior. Accordingly he took counsel with another nobleman, named Kira, whose vast knowledge of ceremonies and court etiquette was equalled only by the meanness of his disposition. Resenting honest Asano's neglect to fee him for the information which he had grudgingly imparted, he twitted and jeered at him for a country lout unworthy the name of Daimyō. At last, he actually went so far as to order Asano to bend down and fasten up his foot-gear for him. Asano, long-suffering though he was, could not brook such an insult. Drawing his sword, he slashed the insolent wretch in the face, and would have made an end of him, had he not sought safety in flight. The palace—for this scene took place within the precincts of the palace—was of

course soon in an uproar. Thus to degrade its majesty by a private brawl was a crime punishable with death and confiscation. Asano was condemned to perform *harakiri* that very evening, his castle was forfeited, his family declared extinct, and all the members of his clan disbanded:—in Japanese parlance they became *rōnins*, literally “wave-men,” that is, wanderers, fellows without a lord and without a home. This was in the month of April, 1701.

So far the first act. Act two is the vengeance. Ōishi Kuranosuke, the senior retainer of the dead *Daimyō*, determines to revenge him, and consults with forty-six others of his most trusty fellow-lieges as to the ways and means. All are willing to lay down their lives in the attempt. The difficulty is to elude the vigilance of the government. For mark one curious point: the vendetta, though imperatively prescribed by custom, was forbidden by law, somewhat as duelling now is in certain Western countries. Not to take vengeance on an enemy involved social ostracism. On the other hand, to take it involved capital punishment. But not to take it was an idea which never entered the head of any chivalrous Japanese.

After many secret consultations, it was determined among the Rōnins that they should separate and dissemble. Several of them took to plying trades. They became carpenters, smiths, and merchants in various cities, by which means some of their number gained access to Kira's mansion, and learnt many of the intricacies of its corridors and gardens. Ōishi himself, the head of the faithful band, went to Kyōto, where he plunged into a course of drunkenness and debauchery. He even discarded his wife and children, and took a harlot to live with him. Thus was their enemy, to whom full reports of all these doings were brought by spies, lulled at last into complete security. Then suddenly, on the night of the 30th January, 1708, during a violent snow-storm, the attack was made. The Forty-Seven Rōnins forced the gate of Kira's mansion, slew his

retainers, and dragged forth the high-born but chicken-hearted wretch from an outhouse in which he had sought to hide himself behind a lot of firewood and charcoal. Respectfully, as befits a mere gentleman when addressing a great noble, the leader of the band requested Kira to perform *harakiri*, thus giving him the chance of dying by his own hand and so saving his honour. But Kira was afraid, and there was nothing for it but to kill him like the scoundrel that he was.

That done, the little band formed in order, and marched (day having now dawned) to the temple of Sengakuji at the other end of the city. On their way thither, the people all flocked out to praise their doughty deed, a great Daimyō whose palace they passed sent out refreshments to them with messages of sympathy, and at the temple they were received by the abbot in person. There they laid on their lord's grave, which stood in the temple-grounds, the head of the enemy by whom he had been so grievously wronged. Then, came the official sentence, condemning them all to commit *harakiri*. This they did separately, in the mansions of the various Daimyōs to whose care they had been entrusted for the last few days of their lives, and they also were buried in the same temple grounds, where their tombs can be seen to this day. The enthusiastic admiration of a whole people during two centuries has been the reward of their obedience to the ethical code of their time and country.

**Books recommended.** *The Forty-Seven Rōnins*, the first story in Mitford's *Tales of Old Japan*. Mr Mitford gives, in his charming style, various picturesque details which want of space forces us to omit.—Dickin's *Chiusungura or the Loyal League* is a translation of the popular play founded on the story of the Rōnins.—There is a whole literature on the subject, both native and European. Of native books, the *I-ro-ha Bunko* is the one best worth reading. It is easy, graphic, and obtainable everywhere. In it and its sequel, the *Yuki no Akebono*, the adventures of each of the Forty-Seven Rōnins are traced out separately, the result being a complete picture of Japanese life two centuries ago. It should, however, be remembered that these works belong rather to the catalogue of historical novels than to that of history proper.

**Fuji.** A fat and infuriated tourist has branded Fuji in print as "that disgusting mass of humbug and ashes." The Japa-

nese poet Kada-no-Azuma-Marō was more diplomatic when he simply said (we render his elegant verse into flat English prose): "The mountain which I found higher to climb than I had heard, than I had thought, than I had seen,—was Fuji's peak."\*

But such adverse, or at best cold, criticism is rare. Natives and foreigners, artists and holiday-makers, alike fall down in adoration before the wondrous mountain which stands utterly alone in its union of grace and majesty. During the Middle Ages, when Fuji's volcanic fires were more active than at present, a commonplace of the poets was to liken the ardour of their love to that which lit up the mountain-top with flame. Another poet earlier still—he lived before the time of King Alfred—sings as follows :

There on the border, where the land of Kai†  
Doth touch the frontier of Suruga's land,  
A beauteous province stretched on either hand,  
See Fusi-yama rear his head on high !

The clouds of heaven in reverent wonder pause,  
Nor may the birds those giddy heights assay  
Where melt thy snows amid thy fires away,  
Or thy fierce fires lie quenched beneath thy snows.

What name might fitly tell, what accents sing,  
Thine awful, godlike grandeur ? 'Tis thy breast  
That holdeth Narusawa's flood at rest,  
Thy side whence Fujikawa's waters spring.

Great Fusi-yama, towering to the sky !  
A treasure art thou giv'n to mortal man,  
A God Protector watching o'er Japan :—  
On thee forever let me feast mine eye.

\* *Kikishi yori mo*  
    *Omoishi yori mo*  
    *Mishi yori mo*  
    *Noborite takaki*  
    *Yama wa Fuji no ne.*

† Pronounced so as to rhyme with "high."

But enough of poetry. The surveyors tell us that Fuji is 12,365 feet high—an altitude easy to remember, if we take for *memoria technica* the twelve months and the three hundred and sixty-five days of the year.\* The geologists inform us that Fuji is a young volcano, to which fact may be ascribed the as yet almost unsullied perfection of its shape. The beginning of degradation is the hump on the south side, called Hōei-zan from the name of the period when it was formed by the most recent eruption of which history tells. This eruption lasted with intervals from the 16th December, 1707, to the 22nd January, 1708. The geologists further assure us that Fuji had several predecessors in the same vicinity,—Mounts Futago, Koma-ga-take, and others in the Hakone district being volcanoes long since extinct. Futago, indeed, still has a crater which deserves a visit, so perfect is its shape and so thickly carpeted is it with moss and shrubs.

Philology is the science that can tell us least; for no consensus of opinion has yet been reached as to the origin of the name of *Fuji*—anciently *Fuzi* or *Fuzhi*. *Fuji-san*, the current popular name, simply means “Mount Fuji,” *san* being Chinese for “mountain.” *Fuji-no-yama*, the form preferred in poetry, means “the mountain of Fuji” in pure Japanese; and the Europeanised form *Fusiyama* is a corruption of this latter. But what is the etymology of *Fuji* itself? The Chinese characters give us no clue. Sometimes the name is written 不二, “not two,” that is, “unrivalled,” “peerless;” sometimes 不死, “not dying,” “deathless;”—and with this latter transcription is connected a pretty legend about the elixir of life having been taken to the summit of the mountain in days of yore. Others write it 富士, that is, “rich scholar,” a more prosaic rendering, but no whit more trustworthy. Probably *Fuji* is not Japanese at all. It might be a corruption of *Huchi* or *Fuchi*, the Aino name of the goddess of fire; for down to

---

\* Other measurements give about 100 feet more or less.

times almost historical the country round Fuji formed part of Aino-land, and all Eastern Japan is strewn with names of Aino origin. We, however, prefer the suggestion of Mr. Nagata Hōsei, the most learned of living Japanese authorities on Aino, who would derive *Fuji* from the Aino verb *push*, "to burst forth,"—an appellation which might have been appropriately given either to the mountain itself as a volcano, or more probably still to the chief river flowing down from it, the dangerous *Fujikawa*; for the general Aino practice is to leave even conspicuous mountains unnamed, but carefully to name all the rivers. The letter-changes from Aino *push* to classical *Fuzi* are according to Japanese rule, whereas the change from *Huchi* to *Fuzi* would be abnormal. The very circumstance, too, of the former etymology appealing less to the imagination is really in its favour.

A Japanese tradition (of which, however, there is no written notice earlier than A.D. 1652) affirms that Fuji arose from the earth in a single night some time about 800 B.C., while Lake Biwa near Kyōto sank simultaneously. May we not here have an echo of some early eruption, which resulted in the formation, not indeed of Lake Biwa distant a hundred and forty miles, but of one of the numerous small lakes at the foot of the mountain?

The following miscellaneous items will perhaps interest some readers:—The Japanese are fond of comparing Fuji to an inverted fan.—Fuji is inhabited by a lovely goddess named *Ko-no-hana-saku-ya-hime*, which, being interpreted, means "the Princess who Makes the Blossoms of the Trees to Flower." She is also called *Seugen* or *Asama*, and numerous shrines are dedicated to her in many provinces.—The peasants of the neighbouring country-side often speak of Fuji simply as *O Yama*, "the Honourable Mountain," or "the Mountain," instead of mentioning its proper name.—One of Hokusai's best picture-books is his *Fuji Hyakkei*, or *Hundred Views of Fusiyama*, executed when he had reached the age of seventy-six. In it, the

grand mountain stands depicted from every point of view and under every possible circumstance and a few impossible ones; for instance, the artist gives us Fuji in process of being ascended by a dragon. Copies of this book are common, but good ones are rather scarce—According to a popular superstition, the sand brought down during the day by the tread of pilgrims' feet re-ascends spontaneously at night.—The mountain is divided into ten stations, and formerly no woman was allowed to climb higher than the eighth. Lady Parkes was the first woman to tread the summit. This was in October, 1867.—Steam sufficiently hot to cook an egg still issues from several spots on the crater lip.—The Japanese have enriched their language by coining words for special aspects of their favourite mountain. Thus *kagami-Fuji*, literally “mirror Fuji,” means the reflection of Fuji in Lake Hakone. *Kage-Fuji*, or “shadow Fuji,” denotes a beautiful phenomenon,—the gigantic shadow cast by the cone at sunrise on the sea of clouds and mist below. *Hiduri-Fuji*, “left-handed Fuji,” is the name given to the mountain at the village of Nangō, for the reason that that is the only place on the Tōkaidō where, owing to a sharp twist in the road, Fuji appears on the left hand of the traveller bound from Tōkyō to Kyōto, instead of on his right.—18,824 persons, it is asserted, ascended Fuji in 1896, mostly pilgrims.

The foregoing items are merely jotted down haphazard, as specimens of the lore connected with Japan's most famous volcano. To do justice to it geologically, botanically, historically, archæologically, would require a monograph at least as long as this volume.

**Books recommended.** Murray's *Handbook for Japan*, 4th edit., p. 140 *et seq* — For beautiful collotypes of Fuji, see *The Volcanoes of Japan*, Part I *Fuji-san*, by Ogawa, Milne, and Burton.

**Funerals.** Till recently all funerals were in the hands of the Buddhist hierarchy,—even the funerals of Shintō priests themselves; but now the Shintoists are allowed to bury

their own dead. The Shintō coffin resembles that used in Europe. The Buddhist coffin is small and square, and the corpse is fitted into it in a squatting posture with the head bent to the knees,—a custom which some derive from the devout habit of sitting rapt in religious meditation, while others discover in it a symbolical representation, in the last earthly scene, of the position of the unborn child in its mother's womb. Further outward and visible signs whereby to distinguish a Buddhist from a Shintō funeral, are, in the former, the bare shaven heads of the Buddhist priests and the dark blue coats of the coffin-bearers; in the latter, the plain white garb of the coffin-bearers, the Shintō priests' non-shaven heads and curious hats, and the flags and branches of trees borne in the procession. The use of large bouquets of flowers is common to both, and both religions have elaborate funeral services.

Vast sums of money are often lavished on funerals, more especially by the Imperial Family. When the Empress Dowager died, in 1897, no less than \$700,000 were appropriated from the national treasury. Never, perhaps, was funeral pomp more elaborate than on this occasion, which, from first to last, occupied several weeks.—for the actual interment was only the last scene in an extraordinarily complicated set of observances. The procession was two miles in length, the final ceremony lasted over twenty-two hours, during all which time Imperial princes stood or walked almost barefoot in the snow without eating a morsel of food. An ox-wagon, with wheels purposely built so as to creak mournfully, bore the elaborate coffin in which the body lay preserved in vermilion. Three oxen drew it, harnessed in single file,—the leader jet-black, the next dun colour with black flecks, the third spotted white and black, with a white star on the forehead and four white stockings,—all this in accordance with ancient use. The actual grave-diggers were habited as birds with black wings, because for these, being devoid of reason, there could be no

sacrilege in perching upon an Empress's tomb. All sound of music was hushed throughout the land for the space of a month, the schools were closed for a week, and thousands of criminals liberated. The Court itself suspended all festivities for a year. (See also Article on **ARCHÆOLOGY**.)

**Gardens.** A garden without flowers may sound like a contradiction in terms. But it is a fact that many Japanese gardens are of that kind, the object which the Japanese landscape gardener sets before him being to produce something park-like,—to suggest some famous natural scene, in which flowers may or may not appear, according to the circumstances of the case. When they do, they are generally grouped together in beds or under shelter, and removed as soon as their season of bloom is over, more after the manner of a European flower-show. In this way are obtained horticultural triumphs, such as are described in the article on **FLOWERS**. Triumphs of another kind are achieved by dwarfing. Thus you may see a pine-tree or a maple, sixty years old and perfect in every part, but not more than a foot high. Japanese gardeners are also very skilful in transplanting large trees. A judicious treatment of the accessory roots during a couple of years enables massive, aged trees to be removed from place to place, so that a Japanese *nouveau riche* can raise up anything—even an ancestral park—on whatever spot he fancies.

Japanese landscape-gardening is one of the fine arts. Ever since the middle of the fifteenth century, generations of artists have been busy perfecting it, elaborating and refining over and over again the principles handed down by their predecessors, until it has come to be considered a mystery as well as an art, and is furnished—not to say encumbered—with a vocabulary more complicated and recondite than any one who has not

perused some of the native treatises on the subject can well imagine. There is a whole set of names for different sorts of garden lanterns, another for water-basins, another for fences (one authority enumerates nineteen kinds of screen fences alone), another—and this is a very important subject—for those large stones, which, according to Japanese ideas, constitute the skeleton of the whole composition.

Then, too, there are rules for every detail; and different schools of the art or science of gardening have rules diametrically opposed to each other. For instance, larger trees are planted and larger hills made by one school in the front portion of a garden, and smaller ones in the further portions, with the object of exaggerating the perspective and thus making the garden look bigger than it really is. Another school teaches the direct contrary. Suggestion is largely used, as when part of a small lake is so adroitly hidden as to give the idea of greater size in the part unseen, or as when a meander of pebbles is made to represent a river-bed. Everything, in fact, has a reason—generally an abstruse reason. Gardens are supposed to be capable of symbolising abstract ideas, such as peace, chastity, old age, etc. The following passage, from the authority quoted below, will show how the garden of a certain Buddhist abbot is made to convey the idea of the power of divine truth:—"This garden consists almost entirely of stones arranged in a fanciful and irregular manner in a small enclosure, the sentiment expressed depending for its value upon acquaintance with the following Buddhist legend, somewhat reminding us of the story of Saint Francis and the birds. A certain monk Daita, ascending a hillock and collecting stones, began to preach to them the secret precepts of Buddha, and so miraculous was the effect of the wondrous truths which he told that even the lifeless stones bowed in reverent assent. Thereupon the Saint placed them upon the ground around him, and consecrated them as the 'Nodding Stones.'"

What the Japanese call *hako-niwa* is a whole landscape-garden compressed into the microscopic limits of a single dish or flower-pot,—paths, bridges, mountains, stone lanterns, etc., all complete,—a fanciful little toy.

The roof ridge of a peasant's dwelling sometimes presents the aspect of a flower-garden; for when it is flat, it is apt to be overgrown with irises or red lilies. People disagree about the reason. Some say that the flowers are planted in order to avert pestilence, while others no less positively affirm the growth to be accidental. Others again assert that the object is to strengthen the thatch. We incline to this latter view. Bulbs do not fly through the air, neither is it likely that bulbs should be contained in the sods put on the top of *all* the houses in a village. We have noticed, furthermore, that in the absence of such sods, brackets of strong shingling are employed, so that it is safe to assume that the two are intended to serve the same purpose.

**Geography.** The boundaries of Japan have expanded greatly in the course of ages. The central and western portions of the Main Island, together with Shikoku, Kyūshū, and the lesser islands of Iki, Tsushima, Oki, Awaji, and perhaps Sado, formed the Japan of early historic days, say of the eighth century after Christ. At that time the Ainos, though already in full retreat northwards, still held the Main Island as far as the 38th or 39th parallel of latitude. They were soon driven across the Straits of Tsugaru into Yezo, which island was itself gradually conquered during the period extending from the twelfth to the seventeenth century. In the eighteenth century a portion of Saghalien was added to Japanese territory. But a discussion having arisen on this subject between Japan and Russia, the weaker of the two powers

naturally went to the wall. Saghalien, with its valuable coal-fields and fisheries, was ceded to Russia by the treaty of St. Petersburg in 1875, and the barren, storm-swept Kurile Islands were obtained in exchange. Meanwhile, the Luchu and Bonin Islands had been added to the Japanese possessions, and in 1895 the valuable island of Formosa was ceded by the vanquished Chinese. The empire thus, in its present and furthest extent, stretches from Kamchatka on the North in about lat.  $51^{\circ}$ , to the the extremity of Formosa on the South in lat.  $22^{\circ}$ , and from  $120^{\circ}$  to  $156^{\circ}$  of longitude East of Greenwich.

Japan proper consists of three large islands, of which one, the largest or Main Island, has no name in popular use, while the other two are called respectively Shikoku and Kyūshū, together with the small islands of Sado, Oki, Tsushima, and a multitude of lesser ones still. The largest island is separated from the two next in size by the celebrated Inland Sea, for which latter also there is no generally current Japanese name. The area of the entire Japanese empire, excluding Formosa and the Pescadores, is between 146,000 and 147,000 square miles. Hardly twelve per cent of this total area is cultivated, or even cultivable. By far the greater portion of it is covered with mountains, many of which are volcanoes either active or extinct. Fuji itself was in eruption as late as January, A. D. 1708. Of recently active volcanoes we may mention Asama, the two Shirane-sans, Nasu-yama, and Bandai-san in Eastern Japan, Vries Island (Ōshima) not far from the entrance to Yokohama harbour, Aso-san and Kirishima-yama in Kyūshū, and the beautifully shaped Koma-ga-take near Hakodate. Others, extinct or quiescent, are Ontake, Hakusan, Tateyama, Nantai-zan, Chōkai-zan, Iide-san, Ganju-san, and Iwaki-yama, all on the Main Island. Some are difficult to class, for instance, Sakura-jima in Kyūshū, whose smoke has long been reduced almost to nothing, and Onsen-ga-take in the same island, where all that remains active is a solfatara at

its base. The grandest mountain mass in Japan is the Shinano-Hida range—granite giants of from 8,000 to 10,000 feet in height.

Owing to the narrowness of the country, most Japanese streams are rather torrents than rivers. The rivers best worth mentioning are the Kitakami, the Abukuma, the Tone, the Tenryū, and the Kiso, flowing into the Pacific Ocean, the Shinano-gawa flowing into the Sea of Japan, and the Ishikari in Yezo. Most of the smaller streams have no general name, but change their name every few miles on passing from village to village.

Lake Biwa near Kyōtō is the largest lake, the next being Lake Inawashiro, on whose northern shore rises the ill-omened volcano, Bandai-san. The so-called lakes to the north-east of Tōkyō are but shallow lagoons formed by the retreating sea. The most important straits are the Strait of La Pérouse between Yezo and Saghalien, the Strait of Tsugaru between Yezo and the Main Island, the Kii Channel (Linschoten Strait) between the Main Island and Eastern Shikoku, the Bungo Channel between Western Shikoku and Kyūshū, and the Strait of Shimonoseki between the south-western extremity of the Main Island and Kyūshū. The most noteworthy gulfs or bays are Volcano Bay in Southern Yezo, Aomori Bay at the northern extremity of the Main Island, Sendai Bay in the north-east, the Gulfs of Tōkyō, Sagami, Suruga, Owari, and Kagoshima facing south, and the Bay of Toyama between the peninsula of Noto and the mainland.

Of peninsulas the chief are Noto, jutting out into the Sea of Japan, and Kazusa-Bōshū and Izu, not far from Tōkyō on the Pacific Ocean side. It is an interesting fact that both Noto and Izu, words meaningless in Japanese—mere place-names—can be traced back to terms still used by the Ainos to designate the idea of a “promontory” or “peninsula.” Finally, even so rapid a sketch as this cannot pass over the waterfalls of Nikkō,

of Kami-ide near Fuji, of Nachi in Kishū, and of Kōbe. Still less must we forget that mighty river in the sea—the Kuroshio, or “Black Brine”—which, flowing northwards from the direction of Formosa and the Philippine Islands, warms the southern and south-eastern coasts of Japan much as the Gulf-stream warms the coasts of western Europe.

There are two current divisions of the soil of the empire—an older and more popular one into provinces (*kuni*), of which there are eighty-four in all, and a recent, purely administrative one into prefectures (*ken*), of which there are forty-three, exclusive of Yezo and Formosa. Owing to the extensive use made of the Chinese language in Japan, most of the provinces have two names,—one native Japanese, the other Chinese. Thus, the provinces to the north and west of Tōkyō marked Kōtsuke, Shinano, and Kai on our map, are also called Jōshū, Shinshū, and Kōshū respectively, the syllable *shū* (州) signifying “province” in Chinese. The south-western province marked Nagato in the map bears the alternative name of Chōshū, and forms part of the prefecture of Yamaguchi, which also includes the province of Suwō. To add to the perplexities of the foreign student, groups of provinces receive special names in popular and historical parlance. Such, are, for instance, the *Go-Kinai*, or “Five Home Provinces,” consisting of the Kyōto-Nara-Ōsaka district, and the *Kwantō* which includes all the provinces of the East. The three chief cities (*sam-pu*) of Japan are Tōkyō (1,389,000 inhabitants), Ōsaka (487,000), and Kyōto (340,000), which belong to no prefecture and are governed separately. The other most populous towns are Nagoya (215,000), Yokohama (170,000), Kōbe (161,000), Hiroshima (100,000), Kanazawa in the province of Kaga (89,000), Sendai (82,000), Nagasaki (72,000), and Kumamoto (70,000). The “open ports” of Hakodate and Niigata have each 50,000.

**Books recommended.** Rein's *Japan*. *The China Sea Directory*, Vol. IV.

**Geology.** It is popularly supposed that Japan entirely consists, or almost entirely consists, of volcanic rocks. Such a supposition is true for the Kurile Islands, partially true for the northern half of the Main Island and for Kyūshū. But for the remainder of the country, that is, the southern half of the Main Island and Shikoku, the supposition is quite without support. The backbone of the country consists of primitive gneiss and schists. Amongst the latter, in Shikoku, there is an extremely interesting rock consisting largely of piedmontite. Overlying these amongst the Palæozoic rocks, we meet in many parts of Japan with slates and other rocks possibly of Cambrian or Silurian age. Trilobites have been discovered in Rikuzen. Carboniferous rocks are represented by mountain masses of *Fusulina* and other limestones. There is also amongst the Palæozoic group an interesting series of red slates containing *Radiolaria*.

Mesozoic Rocks are represented by slates containing *Ammonites* and *Monotis*, evidently of Triassic age, rocks containing *Ammonites Bucklandi* of Liassic age, a series of beds rich in plants of Jurassic age, and beds of Cretaceous age containing *Trigonia* and many other fossils. The Cainozoic or Tertiary system forms a fringe round the coasts of many portions of the Empire. It chiefly consists of stratified volcanic tuffs rich in coal, lignite, fossilised plants, and an invertebrate fauna. Diatomaceous earth exists at several places in Yezo. In the alluvium which covers all, have been discovered the remains of several species of elephants, which, according to Dr. Edmund Naumann, are of Indian origin. The most common eruptive rock is andesite. Such rocks as basalt, diorite, and trachyte are comparatively rare. Quartz porphyry, quartzless porphyry, and granite are largely developed.

The mineral most extensively worked in Japan is coal, large deposits of which exist in North-Western Kyūshū and near Nagasaki in the south, and at Poronai and other places in Yezo

at the northern extremity of the empire. Not only is the output sufficient to supply the wants of the country. Foreign steamers largely use Japan coal, and considerable shipments are made to Hongkong and other Eastern ports. The copper mines of Ashio near Nikkō, and of Besshi in Shikoku produce enormous quantities of copper, and the antimony production is among the most notable in the world. From the mine of Ichinokawa in Shikoku come the wonderful crystals of antimonite, which are such conspicuous objects in the mineralogical cabinets of Europe. There is a fair production of silver; but that of other metals—for instance, gold and tin—is relatively small.

**Globe-trotters** have been described, once for all, by Mr. Netto in a passage of his *Papierschnetterlinge aus Japan*, of which the following is a faithful translation:—

“ *Globe-trotter* is the technical designation of a genus which, like the phylloxera and the Colorado beetle, had scarcely received any notice till recent times, but whose importance justifies us in devoting a few lines to it. It may be subdivided, for the most part, into the following species:—

“ 1. *Globe trotter communis*. Sun-helmet, blue glasses, scant luggage, celluloid collars. His object is a maximum of travelling combined with a minimum of expense. He presents himself to you with some suspicious introduction or other, accepts with ill-dissembled glee your lukewarm invitation to him to stay, generally appears too late at meals, makes daily enquiries concerning *jinrikisha* fares, frequently invokes your help as interpreter to smooth over money difficulties between himself and the *jinrikisha*-men, offers honest curio-dealers who have the *entrées* to-

your house one-tenth of the price they ask, and loves to occupy your time, not indeed by gaining information from you about Japan (all that sort of thing he knows already much more thoroughly than you do), but by giving *you* information about India, China, and America,—places with which you are possibly as familiar as he. When the time of his departure approaches, you must provide him with introductions even for places which he has no present intention of visiting, but which he *might* visit. You will be kind enough, too, to have his purchases here packed up,—but, mind, very carefully. You will also see after freight and insurance, and despatch the boxes to the address in Europe which he leaves with you. Furthermore, you will no doubt not mind purchasing and seeing to the packing of a few sundries which he himself has not had time to look after.

“ 2. *Globe-trotter scientificus*. Spectacles, microscope, a few dozen note-books, alcohol, arsenical acid, seines, butterfly-nets, other nets. He travels for special scientific purposes, mostly natural-historical (if zoological, then woe betide you!). You have to escort him on all sorts of visits to Japanese officials, in order to procure admittance for him to collections, museums, and libraries. You have to invite him to meet Japanese *savants* of various degrees, and to serve as interpreter on each such occasion. You have to institute researches concerning ancient Chinese books, to discover and engage the services of translators, draughtsmen, flayers and stuffers of specimens. Your spare room gradually develops into a museum of natural history, a fact which you can *smell* at the very threshold. In this case, too, the packing, passing through the custom-house, and despatching of the collections falls to your lot; and happy are you if the objects arrive at home in a good state of preservation, and you have not to learn later on that such and such an oversight in packing has caused ‘irreparable’ losses. Certain it is that, for years after, you will be reminded from time to time of your

inquisitive guest by letters wherein he requests you to give him the details of some scientific speciality whose domain is disagreeably distant from your own, or to procure for him some creature or other which is said to have been observed in Japan at some former period.

“3. *Globe-trotter elegans*. Is provided with good introductions from his government, generally stops at a legation, is interested in shooting, and allows the various charms of the country to induce him to prolong his stay.

“4. *Globe-trotter independens*. Travels in a steam-yacht, generally accompanied by his family. Chief goal of his journey: an audience of the Mikado.

“5. *Globe-trotter princeps*. Princes or other dignitaries recognisable by their numerous suite, and who undertake the round journey (mostly on a man-of-war) either for political reasons or for purposes of self-instruction. This species is useful to the foreign residents, in so far as the receptions and fêtes given in their honour create an agreeable diversion.....

“We might complete our collection by the description of a few other species, *e g.*, the *Globe-trotter desperatus*, who expends his uttermost farthing on a ticket to Japan with the hope of making a fortune there, but who, finding no situation, has at last to be carted home by some cheap opportunity at the expense of his fellow-countrymen. Furthermore might be noticed the *Globe-trotter dolosus*, who travels under some high-sounding name and with a doubtful banking account, merely in order to put as great a distance as possible betwixt himself and the home police. Likewise the *Globe-trotter locustus*, the species that travels in swarms, perpetually dragged around the universe by Cook and the likes of Cook . . . . Last, but not least, just a word for the *Globe-trotter amabilis*, a species which is fortunately not wanting and which is always welcome. I mean the old friends and the new, whose memory lives fresh in the minds of our small community, connected

as it is with the recollection of happy hours spent together. Their own hearts will tell them that not they, but others, are pointed at in the foregoing—perhaps partly too harsh—description.”

**Go**, properly *gomoku narabe*, often with little appropriateness termed “checkers” by European writers, is the most popular of the indoor pastimes of the Japanese,—a very different affair from the simple game known to Europeans as *Goban* or *Gobang*, properly the name of the board on which *go* is played. It is the great resource of most of the visitors to the hot-springs and other health-resorts, being often played from morning till night, save for the intervals devoted to eating and bathing. *Go* clubs and professors of the art are found in all the larger cities, where, too, blind players may occasionally be met with. *Go* may with justice be considered more difficult than chess. There is in it more scope for sustained effort, and one false move does not put a player *hors-de-combat*, as is so often the case in our Western games of skill.

*Go* was introduced into Japan from China by Shimmomichi-no-Mabi, commonly known as Kibi Daijin, who flourished during the reign of the Emperor Shōmu (A.D. 724—756). In the middle of the seventeenth century, a noted player, called Honnimbō, was summoned from Kyōto to entertain the Chinese ambassador then at the court of the Shōgun, from which time forward special *Go* players were always retained by the Shōguns of the Tokugawa dynasty.

*Go* is played on a square wooden board. Nineteen straight lines crossing each other at right angles make three hundred and sixty-one *me*, or crosses, at the points of intersection. These may be occupied by a hundred and eighty white and a hundred and eighty-one black stones (*ishi*, as they are termed in Japanese). The object of the game is to obtain possession of the largest portion of the board. This is done by securing such positions as can be most easily defended from

the adversary's onslaughts. There are nine spots on the board, called *seimoku*, supposed to represent the chief celestial bodies, while the white and black stones represent day and night, and the number of crosses the three hundred and sixty degrees of latitude, exclusive of the central one, which is called *taikyoku*, that is, the Primordial Principle of the Universe. There are likewise nine degrees—or classes as we should term them—of proficiency in the game, beginning with number one as the lowest, and ending with number nine as the highest point of excellence attainable.

In playing, if the combatants are equally matched, they take the white stones alternately; if unequal, the weaker always takes the black, and odds are also given by allowing him to occupy several or all of the nine spots or vantage points on the board—that is, to place stones upon them at the outset. A description of how the game proceeds would be of little utility here, it being so complicated as to make the personal instruction of a teacher indispensable. Very few foreigners have succeeded in getting beyond a rudimentary knowledge of this interesting game. We know only of one, a German named Korschelt, who has taken out a diploma of proficiency.

The easy Japanese game, called *Gobang*, which was introduced into England a few years ago, is played on the *Go* board and with the *go-ishi*, or round black and white stones. The object of the game is to be the first in getting five stones in a row in any direction.

**Book recommended.** Elaborate details will be found in O. Korschelt's essay on *Das Go-Spiel*, published in Parts 21—24 of the "German Asiatic Transactions."

**Godowns.** See ARCHITECTURE.

**Government.** In theory the Mikado,—heaven-descended, absolute, infallible,—has always been the head and fountain of all power. It belongs to him by a divine right,

which none have ever dreamt of disputing. The single and sufficient rule of life for subjects is implicit, unquestioning obedience, as to the mandates of a god. The comparatively democratic doctrines of the Chinese sages, according to whom "the people are the most important element in a nation, and the sovereign is the lightest," have ever been viewed with horror by the Japanese, to whom the antiquity and the absolute power of their Imperial line are badges of perfection on which they never weary of descanting. A study of Japanese history shows, however, that the Mikado has rarely exercised much of his power in practice. Almost always it has been wielded in his name, often solely against his will, by the members of some ambitious house, which has managed to possess itself of supreme influence over the affairs of state. Thus, the Fujiwara family soon after the civilisation of the country by Buddhism, then the Taira, the Minamoto, and the Hōjō during the Middle Ages, and the Tokugawa in modern times, held the reins of state in succession. Under these ruling families were numerous families of lesser though still high degree, the Daimyōs ;—in other words, the polity was feudal. Even since the revolution of 1868, whose avowed object was to restore the Mikado to his pristine absolutism, it is allowed on all hands that at least a large share of the reality of power has lain with the two great clans of Satsuma and Chōshū, while the aim of the two clans next in influence—Tosa and Hizen—has been to put themselves in Satsuma and Chōshū's place. In February, 1889, there was granted a Constitution, which established a Diet consisting of two houses, and laid the foundation of a new order of things, a share in the government being thenceforth vested in the nobility and in those gentlemen and commoners whose property qualification entitles them to vote or to be voted for. Those possessing this privilege form a little over one per cent of the whole population. The members of the

lower house—three hundred in all—receive each a yearly allowance of \$800. A certain measure of popular control over local affairs was also granted in 1889.

The administration is at present divided into ten departments, namely, the Imperial Household, Foreign Affairs, the Army, the Navy, the Interior, Finance, Justice, Education, Agriculture and Commerce, and Communications (that is, Railways, Posts, Telegraphs, etc.), each presided over by a minister of state. These, with the exception of the minister of the Household Department, constitute the Cabinet. The Cabinet is responsible only to the Emperor, by whom also each minister is appointed and dismissed at will. Besides the Cabinet, there is a Privy Council, whose function is to tender advice. There are three capital cities, Tōkyō, Kyōto, and Ōsaka, each, with its strip of adjacent country, administered by a governor; the rest of the empire is divided into prefectures. An unusually large proportion of the revenue is raised by land taxation. Viewed from an Anglo-Saxon point of view, the Japanese are a much-governed people, officials being numerous, their authority great, and all sorts of things which with us are left to private enterprise being here in the hands of government. But the contrast is less in this respect between Japan and the nations of Continental Europe. Administrative changes are frequent. Political parties, too, form and dissolve and form again; and often radicals who yesterday were banished the capital, appear to-morrow in the Diet sitting on the government benches, or are sent as ambassadors to foreign courts. Still, there is continuity, the aims of the government as a whole running on in the same groove despite changes of personnel. The profound respect for the throne gives continuity. So does the character of Marquis Itō, the ablest man in Japan, who always takes the helm whenever the ship comes to some dangerous shoal or current.

In any case, and whatever its shortcomings, the ruling oligarchy has guided Japan with admirable skill and courage through

the perils of the last thirty years. The nation may have—probably has—further changes in store for it. One thing is certain:—these changes will all be along that road leading westward, which the men of 1868 were the first to open out. It is true that a wave of conservatism has recently swept over the country; but it has been a matter of sentiment only, a return from cosmopolitanism to nationalism in matters of minor importance, and has affected nothing practical by so much as a hair's breadth. Excellent persons from home, who remember the Stuarts and the Legitimists and Don Carlos, sometimes ask whether there may not be a Japanese reaction in favour of feudalism. No! never,—not till the sun stops shining and water begins to flow uphill.

**Books recommended** *Japan*, by Walter Dickson, gives perhaps the fullest account of the government in feudal days.—Marquis Itô's *Commentaries on the Constitution of the Empire of Japan* possess exceptional interest as the utterances of the man who was mainly instrumental in framing that constitution. The historical statements in the *Commentaries* must, however, be received with extreme caution, the Marquis being less of a historian than of a statesman. To take but one instance among several—in the authorised English version, all the Empresses are converted into Emperors. Thus we find "the *Emperor* Suiko," "the *Emperor* Genshō," and so on, which is exactly as if an English constitutional historian should refer to "the Emperor Maud" or "King Elizabeth!" There seems, too, to be a tendency throughout to minimise the differences that separate ancient from modern times. Along with the *Commentaries*, are printed the text of the Constitution itself and several other important documents of a cognate character.

**Harakiri.** Need we say that *harakiri* was for centuries the favourite Japanese method of committing suicide? There were two kinds of *harakiri*,—obligatory and voluntary. The former was a boon granted by government, who graciously permitted criminals of the samurai class thus to destroy themselves instead of being handed over to the common executioner. Time and place were officially notified to the condemned, and officials were sent to witness the ceremony. This custom is quite extinct. Voluntary *harakiri* was practised by men in hopeless trouble, also out of loyalty to a dead superior, and in order to protest—when other protests might be unavailing—against the erroneous con-

duct of a living superior. Examples of this class still take place. That of a young man called Ōhara Takeyoshi, which occurred in 1891, is typical. He was a lieutenant in the Yezo militia, and ripped himself up in front of the graves of his ancestors at the temple of Santokuji in Tōkyō. Following the usual routine in such cases, Lieutenant Ōhara left a paper setting forth the motives of his act, the only innovation being that this document was directed to be forwarded to the Tōkyō News Agency for publication in all the newspapers. The writer, it seems, had brooded for eleven years over the likelihood of Russian encroachment in the northern portion of the Japanese empire, and feeling that his living words and efforts were doomed to fruitlessness, resolved to try what his death might effect. In this particular instance no result was obtained. Nevertheless Ōhara's self-sacrifice, its origin in political considerations, and the expectation that an appeal from the grave would move men's hearts more surely than any arguments urged by a living voice,—all this was in complete accord with Japanese ways of thinking. The Government had no sooner yielded to the demands of France, Russia, and Germany by giving up the conquered province of Liaotung, than forty military men committed suicide in the ancient way. Even women are found ready to kill themselves for loyalty and duty, but the approved method in their case is cutting the throat. Nowise strange, but admirable to Japanese ideas, was it that when, in 1895, the news of Lieutenant Asada's death on the field by battle, was brought to his young wife, she at once, and with her father's consent, resolved to follow him. Having thoroughly cleansed the house and arrayed herself in her costliest robes, she placed her husband's portrait in the alcove, and, prostrating herself before it, cut her throat with a dagger that had been a wedding gift.

The courage to take life—be it one's own or that of others—ranks extraordinarily high in public esteem. Nishino Buntarō, the Shintō fanatic who assassinated the Minister of Education,

Viscount Mori, on the day of the proclamation of the Constitution in 1889, and who himself perished in the fray, was worshipped almost as a god, his tomb was constantly decked with flowers, incense was burnt before it, verses were hung over it, pilgrimages made to it. The would-be assassin of Count Ōkuma met with scarcely less glorification. At last, in 1891, the Government actually felt itself constrained to issue an ordinance prohibiting costly funerals and other posthumous honours to deceased criminals.

*Harakiri* has sometimes been translated "the happy dispatch," but the original Japanese is less euphemistic. It means "belly-cutting;" and that is what the operation actually consists in, neither more nor less. Or rather, no: there is more. In modern times, at least, people not having always succeeded in making away with themselves expeditiously by this method, it became usual for a friend—a best man, as one might say—to stand behind the chief actor in the tragedy. When the latter thrust his dirk into himself, the friend at once chopped off his head.

*Harakiri* is not an aboriginal Japanese custom. It was evolved gradually during the Middle Ages. The cause of it is probably to be sought in the desire, on the part of vanquished warriors, to avoid the humiliation of falling into their enemies' hands alive. Thus the custom would come to be characteristic of the military class, in other words, of the feudal nobility and gentry; and from being a custom, it next developed into a privilege about A.D. 1500, as stated above.

It is an odd fact that the Japanese word *harakiri*, so well-known all over the world, is but little used by the Japanese themselves. The Japanese almost always prefer to employ the synonym *seppuku*, which they consider more elegant because it is derived from the Chinese. After all, they are not singular in this matter. Do not we ourselves say "abdomen," when what we mean is plain Saxon—well, we will not shock ears

polite by mentioning the word again. Latinisms in English, "Chinesisms" in Japanese, cover a multitude of sins.

**Books recommended** The whole subject is elaborately described in *Appendix A* to the *Tales of Old Japan*, by A B Mitford, who himself had the gruesome opportunity of seeing *hanakiri* performed—Our own *Romanised Japanese Reader*, Extract No 63, gives a literal translation of a native account of the *hanakiri* of Asano, Lord of Akō, whose death was so dramatically avenged by the famous "Forty-Seven Rōnins."

**Heraldry.** In Japan, as in Europe, feudalism produced the "nobyl and gentyl sciaunce" of heraldry, though the absence of such powerful stimuli as tournaments and the crusades prevented Japanese heraldry from developing to the same high degree of complexity as the heraldry of the West. Most of the great Daimyōs possessed three crests or badges (*mon*), the lesser Daimyōs had two, ordinary samurai one. These served in time of war to adorn the breastplate, the helmet, and the flag. In time of peace the crest was worn, as it still is by those who retain the native garb, in five places on the upper garment, namely, at the back of the neck, on each sleeve, and on each breast. Various other articles were marked with it, such as lanterns, travelling-cases (what modern curio-dealers call "Daimyō boxes"), etc., etc. The Imperial family has two crests,—the sixteen-petalled chrysanthemum (*kiku no go mon*), and the leaves and flowers of the paulownia (*kiri no go mon*). The crest of the Tokugawa dynasty of Shōguns was three asarum leaves, whose points meet in the centre. The bamboo, the rose, the peony, even the radish (*daikon*), have furnished crests for noble families. Other favourite "motives" are birds, butterflies, running water, fans, feathers, ladders, bridle-bits, Chinese characters, and geometrical designs. One small Daimyō, named Aoki, had for his crest the summit of Fuji, with its trifurcated peak issuing from the clouds. The great Shimazu family of Satsuma has the cross within a circle.

**Books recommended** *Japanese Heraldry*, by T. R. H. McClatchie, printed in Vol. V. of the Asiatic Transactions. Our account is a *pièces* of McClatchie's essay.—Appert's *Ancien Japon*, in which all the *Daimyōs'* crests are beautifully figured.

**History and Mythology.** To the eye of the critical investigator, Japanese history properly so-called opens only in the latter part of the fifth or the beginning of the sixth century after Christ, when the gradual spread of Chinese culture, filtering in through Korea, had sufficiently dispelled the gloom of original barbarism to allow of the keeping of records.

The whole question of the credibility of the early history of Japan has been carefully gone into during the last fifteen years by Aston and others, with the result that the first date pronounced trustworthy is A.D. 461, and it is discovered that even the annals of the sixth century are to be received with caution. We have ourselves no doubt of the justice of this negative criticism, and can only stand in amazement at the simplicity of most European writers, who have accepted, without sifting them, the uncritical statements of the Japanese annalists. One eminent German professor, the late Dr. Hoffmann, actually discusses the *hour* of Jimmu Tennō's accession in the year 660 B. C., which is much as if one should gravely compute in cubic inches the size of the pumpkin which Cinderella's fairy godmother turned into a coach and six. How comes it that profound erudition so often lacks the salt of humour and the guidance of common sense?

Be this as it may, criticism is not at all a "Japanesey" thing; and as Japanese art and literature contain frequent allusions to the early history (so-called) of the country, the chief outlines of this history, as preserved in the works entitled *Kojiki* and *Nihongi*, both dating from the eighth century after Christ, may here be given. We include the mythology under the same heading, for the reason that it is absolutely impossible to separate the two. Why, indeed, attempt to do so, where both are equally fabulous?

Before, then, the beginning of the world of men, there existed numerous generations of gods. The last of these "divine generations," as they are termed, were a brother and sister, named respectively Izanagi and Izanami, who, uniting in marriage, gave birth to the various islands of the Japanese archipelago and to a great number of additional gods and goddesses. The birth of the God of Fire caused Izanami's death, and the most striking episode of the whole Japanese mythology ensues, when her husband, Orpheus-like, visits her at the gate of the under-world to implore her to return to him. She would fain do so, and bids him wait while she takes counsel with the deities of the place. But he, impatient at her long tarrying, breaks off one of the teeth of the comb in his hair, lights it and goes in, only to find her a hideous mass of putrefaction, in the midst of which are seated the eight Gods of Thunder. Eight, be it observed, is the mystic number of the Japanese, as six is the mystic number of the Ainos whom their ancestors drove out.

Returning to south-western Japan, Izanagi purifies himself by bathing in a stream, and as he does so, fresh deities are born from each article of clothing that he throws down on the river-bank, and from each part of his person. One of these deities was the Sun-Goddess Ama-terasu, who was born from his left eye, while the Moon-God sprang from his right eye, and the last born of all, Susa-no-o, whose name means "the Impetuous Male," was born from his nose. Between these three children their father divides the inheritance of the universe.

At this point the story loses its unity. The Moon-God is no more heard of, and the traditions concerning the Sun-Goddess diverge from those concerning the Impetuous Male Deity in a manner which is productive of inconsistencies in the rest of the mythology. The Sun-Goddess and the Impetuous Male Deity have a violent quarrel, and at last the latter breaks a hole in the roof of the hall in Heaven, where his sister

is sitting at work with her "celestial weaving-maidens," and through it lets fall "a heavenly piebald horse which he had flayed with a backward flaying." The consequences of this impious act were so disastrous that the Sun-Goddess withdrew for a season into a cave, from which the rest of the eight hundred myriad deities with difficulty allured her. The Impetuous Male Deity was thereupon banished, and the Sun-Goddess remained mistress of the field. Yet, strange to say, she thenceforward retires into the background, and the most bulky section of the mythology consists of stories concerning the Impetuous Male Deity and his descendants, who are represented as the monarchs of Japan, or rather of the province of Izumo. The Impetuous Male Deity himself, whom his father had charged with the dominion of the sea, never assumes that rule, but first has a curiously told amorous adventure and an encounter with an eight-forked serpent in Izumo, and afterwards reappears as the capricious and filthy deity of Hades, who, however, seems to retain some authority over the land of the living, as he invests his descendant of the sixth generation with the sovereignty of Japan.

Of this latter personage a whole cycle of stories is told, all centring in the province of Izumo. We learn of his conversations with a hare and with a mouse, of the prowess and cleverness which he displayed on the occasion of a visit to his ancestor in Hades, which is in this cycle of traditions a much less mysterious place than the Hades visited by Izanagi, of his loves, of his triumph over his eighty brethren, of his reconciliation with his jealous consort, and of his numerous descendants. We hear too of a Lilliputian deity, who comes across the sea to request this monarch of Izumo to share the kingdom with him.

This last-mentioned legend repeats itself in the sequel. The Sun-Goddess resolves to bestow the sovereignty of Japan on a child of whom it is doubtful whether he were born of her or of

her brother, the Impetuous Male Deity Three embassies are sent from Heaven to Izumo to arrange matters; but it is only a fourth that is successful, the final ambassadors obtaining the submission of the monarch or deity of Izumo, who surrenders his throne, and promises to serve the new dynasty (apparently in the under-world) if a palace or temple be built for him and he be appropriately worshipped. Thereupon the child of the deity whom the Sun-Goddess had originally chosen descends to earth,—not to Izumo in the north-west, as the logical sequence of the story would lead one to expect,—but to the peak of a mountain in the south-western island of Kyūshū.

Here follows a quaint tale accounting for the odd appearance of the *bêche-de-mer*, and another to account for the shortness of the lives of mortals, after which we are told of the birth under peculiar circumstances of the heaven-descended deity's three sons. Two of these, Hoderi and Hoori, whose names may be Englished as "Fire-Shine" and "Fire-Fade," are the heroes of a very curious legend, which includes an elaborate account of a visit paid by the latter to the palace of the God of Ocean, and of a curse or spell which gained for him the victory over his elder brother, and enabled him to dwell peacefully in his palace at Takachiho for the space of five hundred and eighty years,—the first statement resembling a date which the Japanese historians vouchsafe. Fire-Fade's son married his own aunt, and was the father of four children, one of whom, "treading on the crest of the waves, crossed over to the Eternal Land," while a second "went into the sea-plain," and the two others moved eastward, fighting with the chiefs of Kibi and Yamato, having adventures with gods both with and without tails, being assisted by a miraculous sword and a gigantic crow, and naming the various places they passed through after incidents in their own career. One of these brothers was Kamu-Yamato-Iware-Biko, who (the other having died before him) is accounted the first human Emperor of Japan—the first Mikado.

The posthumous name of Jimmu Tennō was given to him more than fourteen centuries after the date which the historians assign for his decease.

Henceforth Yamato, which had scarcely been mentioned before, and the provinces adjacent to it, become the centre of the story, and Izumo again emerges into importance. A very indecent love-tale forms a bridge which unites the various fragments of the mythology; and the "Great Deity of Miwa," who is identified with the deposed monarch of Izumo, appears on the scene. Indeed, during the rest of the story, this "Great Deity of Miwa" and his colleague the "Small August Deity" (Sukuna-Mi-Kami), the deity Izasa-Wake, the three Water-Gods of Sumi, and the "Great Deity of Kazuraki" form, with the Sun-Goddess and with a certain divine sword preserved at the temple of Isonokami in Yamato, the only objects of worship specially named, the other gods and goddesses being no more heard of. This portion of the story is closed by an account of the troubles which inaugurated the reign of Jimmu's successor, Suisei Tennō, and then occurs a blank of (according to the accepted chronology) five hundred years, during which absolutely nothing is related excepting dreary genealogies, the place where each sovereign dwelt and where he was buried, and the age to which he lived,—this after the minute details which had been given concerning the previous gods or monarchs down to Suisei inclusive. It should likewise be noted that the average age of the first seventeen monarchs (counting Jimmu Tennō as the first) is nearly ninety-six years if we follow the *Kojiki*, and over a hundred if we follow the accepted chronology, which is based chiefly on the divergent statements contained in the *Nihongi*. The age of several of the monarchs exceeds a hundred and twenty years.

The above-mentioned lapse of a blank period of five centuries brings us to the reign of the emperor known to history by the name of Sūjin Tennō, whose life of one hundred and sixty-eight

years (one hundred and twenty according to the *Nihongi*) is supposed to have immediately preceded the Christian era. In this reign, the former monarch of Izumo or god of Miwa again appears and produces a pestilence, of the manner of staying which Sūjin is warned in a dream.

In the following reign an elaborate legend, involving a variety of circumstances as miraculous as any in the earlier portion of the mythology, again centres in the necessity of pacifying the great god of Izumo; and this, with details of internecine strife in the Imperial family, of the sovereign's amours, and of the importation of the orange from the "Eternal Land," brings us to the cycle of traditions of which Yamato-take, a son of the Emperor Keikō, is the hero. This prince, after assassinating one of his brothers, accomplishes the task of subduing both western and eastern Japan; and notwithstanding certain details unacceptable to European taste, his story, taken as a whole, is one of the most pleasing in Japanese legend. He performs marvels of valour, disguises himself as a woman in order to slay the brigands, is the possessor of a magic sword and fire-striker, has a devoted wife who stills the fury of the sea by sitting down upon its surface, has encounters with a deer and with a boar who are really gods in disguise, and finally dies on his way westward before he can reach his home in Yamato. His death is followed by a highly mythological account of the laying to rest of the white bird into which he ended by being transformed.

The succeeding reign is a blank, and the next transports us without a word of warning to quite another scene. The sovereign's home is now in Kyūshū—the south-westernmost island of the Japanese archipelago;—and four of the gods, through the medium of the sovereign's consort, who is known to posterity as the Empress Jingō, reveal the existence of the land of Korea, of which, however, this is not the first mention in the histories. The Mikado disbelieves the divine message, and is punished with death for his incredulity. But the empress, after a special

consultation between her prime minister and the gods, and the performance of various religious ceremonies, marshals her fleet, and, with the assistance of the fishes both great and small and of a miraculous wave, reaches Shiragi (one of the ancient divisions of Korea), and subdues it. She then returns to Japan, the legend ending with a curiously naive tale of how she sat a-fishing one day on a shoal in the River Ogawa in Kyūshū, with threads picked out of her skirt for lures. The date of the conquest of Korea, according to the orthodox chronology, is A. D. 200.

The next episode is the warrior-empress's voyage up to Yamato,—another joint in the story, by means of which the Yamato cycle of legends and the Kyūshū cycle are brought into apparent unity. The *Nihongi* has even improved upon this by making Jingō's husband dwell in Yamato at the beginning of his reign and only remove to Kyūshū later, so that if the less skilfully elaborated *Kojiki* had not been preserved, the tangled skein of the tradition would have been still more difficult to unravel. The Empress's army defeats the troops raised by the native kings or princes, who are represented as her step-sons, and from that time forward the story runs on in a single channel, with Yamato as its scene of action.

China likewise is now first mentioned, books are said to have been brought over from the mainland, and we hear of the gradual introduction of various useful arts. Even the annals of the reign of Jingō's son, Ōjin Tennō, however, during which this civilising impulse from abroad is said to have commenced, are not free from details as miraculous as any in the earlier portions of the history. The monarch himself is said to have lived a hundred and thirty years, while his successor lived eighty-three (according to the *Nihongi*, Ōjin lived a hundred and ten, and his successor Nintoku reigned eighty-seven years). It is not till the next reign that the miraculous ceases, a fact which significantly coincides with the

time at which, says the *Nihongi*, "historiographers were first appointed to all the provinces to record words and events, and forward archives from all directions."

This brings us to the beginning of the fifth century of our era, just three centuries before the compilation of the annals that have come down to us, but only two centuries before the compilation of the first history of which mention has been preserved. From that time forward the story in the *Kojiki*, though not well told, gives us some very curious pictures, and reads as if it were trustworthy. It is tolerably full for a few reigns, after which it again dwindles into mere genealogies, ending with the death of the Empress Suiko in A. D. 628. The *Nihongi*, on the contrary, supplies full details as far as A. D. 701, that is, to within nineteen years of the date of its compilation.

The reader who has followed this summary, or who will take the trouble to study the original Japanese texts for himself, will perceive that there is no break in the story—at least no chronological break—and no break between the fabulous and the real, unless it be in the fifth century of our era, or more than a thousand years later than the date usually assumed as the starting-point of authentic Japanese history. The only breaks are—not chronological—but topographical.

This fact of the continuity of the Japanese mythology and history has been fully recognised by the leading native commentators, whose opinions are those considered orthodox by modern Shintoists, and they draw from it the conclusion that everything in the standard national histories must be accepted as literal truth,—the supernatural equally with the natural. But the general habit of the more sceptical Japanese of the present day, that is to say, of ninety-nine out of every hundred of the educated, is to reject or rather to ignore the legends of the gods, while implicitly believing the legends of the emperors, from Jimmu Tennō, in B.C. 660 downwards. For so arbitrary

a distinction there is not the shadow of justification. The so-called history of Jimmu the first earthly Mikado, of Jingō the conqueror of Korea, of Yamato-take, and of the rest, stands or falls by exactly the same criterion as the legends of the creator and creatress Izanagi and Izanami. Both sets of tales are told in the same books, in the same style, and with an almost equal amount of supernatural detail. The so-called historical part is as devoid as the other of all contemporary evidence. It is contradicted by the more trustworthy, because contemporary, Chinese and Korean records, and—to turn from negative to positive testimony—can be proved in some particulars to rest on actual forgery. For instance, the fictitious nature of the calendars employed to calculate the early dates for about thirteen centuries (from B.C. 660 onward) has not altogether escaped the notice even of the Japanese themselves, and has been clearly exposed for European readers by that careful investigator, the late Mr. William Bramsen; who says, when discussing them in the Introduction to his *Japanese Chronological Tables*, “It is hardly too severe to style this one of the greatest literary frauds ever perpetrated.”

But a truce to this discussion. We have only entered into it because the subject, though perhaps dry, is at least new, and because one's patience is worn out by seeing book after book glibly quote the so-called dates of early Japanese history as if they were solid truth, instead of being the merest haphazard guesses and baseless imaginings of a later age. Arrived at A.D. 600, we stand on *terra firma*, and can afford to push on more quickly.

About that time occurred the greatest event of Japanese history, the conversion of the nation to Buddhism (approximately A.D. 552—621). So far as can be gathered from the accounts of the early Chinese travellers, Chinese civilisation had slowly—very slowly—been gaining ground in the archipelago ever since the third century after Christ. But when the Buddhist mis-

sionaries crossed the water, all Chinese institutions followed them and came in with a rush. Mathematical instruments and calendars were introduced; books began to be written (the earliest that has survived, and indeed nearly the earliest of all, is the already-mentioned *Kojiki*, dating from A. D. 712); the custom of abdicating the throne in order to spend old age in prayer was adopted,—a custom which, more than anything else, led to the effacement of the Mikado's authority during the Middle Ages

Sweeping changes in political arrangements began to be made in the year 645, and before the end of the eighth century, the government had been entirely remodelled on the Chinese centralised bureaucratic plan, with a regular system of ministers responsible to the sovereign, who, as "Son of Heaven," was theoretically absolute. In practice this absolutism lasted but a short time, because the *entourage* and mode of life of the Mikados were not such as to make of them able rulers. They passed their time surrounded only by women and priests, oscillating between indolence and debauchery, between poetastering and gorgeous temple services. This was the brilliant age of Japanese classical literature, which lived and moved and had its being in the atmosphere of an effeminate court. The Fujiwara family engrossed the power of the state during this early epoch (A. D. 670—1050). While their sons held all the great posts of government, their daughters were married to puppet emperors.

The next change resulted from the impatience of the always manly and warlike Japanese gentry at the sight of this sort of petticoat government. The great clans of Taira and Minamoto arose, and struggled for and alternately held the reins of power during the second half of the eleventh and the whole of the twelfth century. Japan was now converted into a camp; her institutions were feudalised. The real master of the empire was he who, strongest with his sword and bow,

and heading the most numerous host, could partition out the land among the chief barons, his retainers. By the final overthrow of the Taira family at the sea-fight of Dan-no-ura in A.D. 1185, Yoritomo, the chief of the Minamotos, rose to supreme power, and obtained from the Court at Kyōto the title of *Shōgun*, literally "Generalissimo," which had till then been applied in its proper meaning to those generals who were sent from time to time to subdue the Ainos or rebellious provincials, but which thenceforth took to itself a special sense, somewhat as the word *Imperator* (also meaning originally "general") did in Rome. The coincidence is striking. So is the contrast. For, as Imperial Rome never ceased to be theoretically a republic, Japan contrariwise, though practically and indeed avowedly ruled by the Shōguns from A. D. 1190 to 1867, always retained the Mikado as theoretical head of the state, descendant of the Sun-Goddess, fountain of all honour. There never were two emperors, acknowledged as such, one spiritual and one secular, as has been so often asserted by European writers. There never was but one emperor,—an emperor powerless, it is true, seen only by the women who attended him, often a mere infant in arms, who was discarded on reaching adolescence for another infant in arms. Still, he was the theoretical head of the state, whose authority was merely delegated to the Shōgun as, so to say, Mayor of the Palace.

By a curious parallelism of destiny, the Shōgunate itself more than once showed signs of fading away from substance into shadow. Yoritomo's descendants did not prove worthy of him, and for more than a century (A. D. 1205—1333) the real authority was wielded by the so-called "Regents" of the Hōjō family, while their liege-lords, the Shōguns, though keeping a nominal court at Kamakura, were for all that period little better than empty names. So completely were the Hōjōs masters of the whole country, that they actually had their

deputy governors at Kyōto and in Kyūshū in the south-west, and thought nothing of banishing Mikados to distant islands. Their rule was made memorable by the repulse of the Mongol fleet sent by Kublai Khan with the purpose of adding Japan to his gigantic dominions. This was at the end of the thirteenth century, since which time Japan has never been attacked from without.

During the fourteenth century, even the dowager-like calm of the Court of Kyōto was broken by internecine strife. Two branches of the Imperial house, supported each by different feudal chiefs, disputed the crown. One was called the *Hokuchō*, or "Northern Court," the other the *Nanchō*, or "Southern Court." After lasting some sixty years, this contest terminated in A. D. 1392 by the triumph of the Northern dynasty, whose cause the powerful Ashikaga family had espoused. From 1388 to 1565, the Ashikagas ruled Japan as Shōguns. Their Court was a centre of elegance, at which painting flourished, and the lyric drama, and the tea ceremonies, and the highly intricate arts of gardening and flower arrangement. But they allowed themselves to sink into effeminacy and sloth, as the Mikados had done before them; and political authority, after being for some time administered less by them than in their name, fell from them altogether in 1597.

Meanwhile Japan had been discovered by the Portuguese (A. D. 1542); and the imprudent conduct of the Portuguese and Spanish friars (*bateren*, as they were called—a corruption of the word *padre*) made of the Christian religion an additional source of discord. Japan fell into utter anarchy. Each baron in his fastness was a law unto himself. Then, in the latter half of the sixteenth century, there arose successively three great men,—Ota Nobunaga, the Taikō<sup>\*</sup> Hideyoshi, and Tokugawa Ieyasu. The

---

<sup>\*</sup> The word *taikō* (大閣), which means "great councillor," was the recognised title of a retired regent (*kwampaku*); but being rarely applied to any except Hideyoshi, it has almost come to form part of his name.

first of these conceived the idea of centralising all the authority of the state in a single person; the second, Hideyoshi, who has been called the Napoleon of Japan, actually put the idea into practice, and added the invasion of Korea (A. D. 1592—1598) to his domestic triumphs. Death overtook him in 1598, while he was revolving no less a scheme than the conquest of China. Ieyasu, setting Hideyoshi's youthful son aside, stepped into the vacant place. An able general, unsurpassed as a diplomat and administrator, he first quelled all the turbulent barons, then bestowed a considerable portion of their lands on his own kinsmen and dependents, and either broke or balanced, by a judicious distribution of other fiefs over different provinces of the empire, the might of those greater feudal lords, such as Satsuma and Chōshū, whom it was impossible to put altogether out of the way. The Court of Kyōto was treated by him respectfully, and investiture as Shōgun for himself and his heirs duly obtained from the Mikado.

In order further to break the might of the Daimyōs, Ieyasu compelled them to live at Yedo, which he had chosen for his capital in 1590, during six months of the year, and to leave their wives and families there as hostages during the other half. What Iyeyasu sketched out, the third Shōgun of his line, Iemitsu, perfected. From that time forward, "Old Japan," as we know it from the Dutch accounts, from art, from the stage, was crystallised for two hundred and fifty years,—the Old Japan of isolation (for Iemitsu shut the country up, to prevent complications with the Spaniards and Portuguese), the Old Japan of picturesque feudalism, of *harakiri*, of a society ranged in castes and orders and officered by spies, the Old Japan of an ever-increasing skill in lacquer and porcelain, of aristocratic punctilio, of supremely exquisite taste.

Unchangeable to the outward eye of contemporaries, Japan had not passed a hundred years under the Tokugawa régime before the seeds of the disease which finally killed that régime

were sown. Strangely enough, the instrument of destruction was historical research. Ieyasu himself had been a great patron of literature. His grandson, the second Prince of Mito, inherited his taste. Under the auspices of this Japanese Mæcenas a school of literati arose, to whom the antiquities of their country were all in all,—Japanese poetry and romance, as against the Chinese Classics; the native religion, Shintō, as against the foreign religion, Buddhism; hence, by an inevitable extension, the ancient legitimate dynasty of the Mikados, as against the upstart Shōguns. Of course this political portion of the doctrine of the literary party was kept in the background at first; for those were not days when opposition to the existing government could be expressed or even hinted at without danger. Nevertheless it gradually grew in importance, so that, when Commodore Perry came with his big guns (A.D. 1853—4), he found a government already tottering to its fall, many who cared little for the Mikado's abstract rights caring a great deal for the chance of aggrandising their own families at the Shōgun's expense.

The Shōgun yielded to the demands of Perry and of the representatives of the other foreign powers—England, France, Russia—who followed in Perry's train, and consented to open Yokohama, Hakodate, and certain other ports to foreign trade and residence (1857—9). He even sent embassies to the United States and to Europe in 1860 and 1861. The knowledge of the outer world possessed by the Court of Yedo, though not extensive, was sufficient to assure the Shōgun and his advisers that it was vain to refuse what the Western powers claimed. The Court of Kyōto had no means of acquiring even this modicum of worldly wisdom. According to its view, Japan, "the land of the gods," should never be polluted by outsiders, the ports should be closed again, and the "barbarians" expelled at any hazard.

What specially tended to complicate matters at this crisis was the independent action of certain Daimyōs. One of them,

the Prince of Chōshū, acting, as is believed, under secret instructions from the Court of Kyōto, fired on ships belonging to France, Holland, and the United States,—this, too, at the very moment (1863) when the Shōgun's government, placed between foreign aggression and home tumult, as between hammer and anvil, was doing its utmost to effect by diplomacy the departure of the foreigners whom it had been driven to admit a few years before. The consequence of this act was what is called "the Shimonoseki Affair," namely, the bombardment of Shimonoseki, Chōshū's chief sea-port, by the combined fleets of the powers that had been insulted, together with Great Britain which espoused their cause on the ground of the solidarity of all foreign interests in Japan. An indemnity of \$3,000,000 was exacted,—a last blow which broke the Shōgunate's back. The Shōgun Iemochi attempted to punish Chōshū for the humiliation which he had brought on Japan, but failed, was himself defeated by the latter's troops, and died. Hitotsubashi, the last of his line, succeeded him. But the Court of Kyōto, prompted by the great Daimyōs of Chōshū and Satsuma, suddenly decided on the abolition of the Shōgunate. The Shōgun submitted to the decree, and those of his followers who did not were routed,—first at Fushimi near Kyōto (17th January, 1868), then at Ueno in Yedo (4th July, 1868), then in Aizu (6th November, 1868), and lastly at Hakodate (27th June, 1869), where some of them had endeavoured to set up an independent republic.

The government of the country was reorganised during 1867—8, nominally on the basis of a pure absolutism, with the Mikado as sole wielder of all authority both legislative and executive. Thus the literary party had triumphed. All their dreams were realised. They were henceforth to have Japan for the Japanese. The Shōgunate, which had admitted the hated barbarian, was no more. Even their hope of supplanting Buddhism by the national religion, Shintō, was

in great measure accomplished. They believed that not only European innovations, but everything—even Japanese—that was newer than A. D. 500, would be forever swept away. Things were to go back to what they had been in the primitive ages, when Japan was really “the land of the gods.”

From this dream they were soon roughly awakened. The shrewd clansmen of Satsuma and Chōshū, who had humoured the ignorance of the Court and the fads of the scholars only as long as their common enemy, the Shōgunate, remained in existence, now turned round, and declared in favour, not merely of foreign intercourse, but of the Europeanisation of their own country. History has never witnessed a more sudden *volte-face*. History has never witnessed a wiser one. We foreigners, being mere lookers-on, may no doubt sometimes regret the substitution of commonplace European ways for the glitter, the glamour of picturesque Orientalism. But can it be doubtful which of the two civilisations is the higher, both materially and intellectually? And does not the whole experience of the last three hundred years go to prove that no Oriental state which retains distinctively Oriental institutions can hope to keep its territory free from Western aggression? What of India? What even of China? And what was Commodore Perry's visit but a threat to the effect that if Japan chose to remain Oriental, she should not be allowed to remain her own mistress? From the moment when the intelligent samurai of the leading clans realised that the Europeanisation of the country was a question of life and death, they (for to this day the government has continued practically in their hands) have never ceased carrying on the work of reform and progress.

The first and greatest step was when the Daimyōs themselves came forward to surrender their estates and privileges,—when, in fact, the Japanese feudal system ended appropriately by committing *harakiri*. A centralised bureaucracy was set up on its ruins (1871). At the same time all social disabilities were

removed, Buddhism was disestablished, an Imperial mint opened, and posts and telegraphs—followed next year by railways—were introduced. In 1873 vaccination, the European calendar, and European dress for officials were adopted, torture was abolished, and the persecution of Christians stopped. At the same time photography, meat-eating, and other “Europeanisms” came pell-mell into vogue, not without official encouragement; and an edict was issued against wearing the queue. Steamship companies were established (1875-1885), an immense financial reform was effected by the commutation of the samurai’s pensions (1876), a Bourse and Chamber of Commerce were inaugurated at Tōkyō (1878), new codes inspired by the Code Napoleon began to be published (1880), a Supreme Court of Justice was instituted (1883), and the English language was introduced into the curriculum of the common schools (1884). Most notable, next to 1873, were 1885-7, the years of the great “foreign fever,” when Japanese society was literally submerged in a flood of European influence, such things as foreign dress for ladies, dancing, athletics, card-playing, etc., etc., coming in with a rush, while what is still remembered as the *Ō-jishin*, or “Great Earthquake,” shook the political world. Then were administrative methods reformed, the hitherto excessive number of officials reduced, and new men, such as Itō and Inouye—names still the most famous in the land—assumed the highest posts.

Meantime, this energetic government had put down no less than three provincial risings,—the Higo Rebellion of 1876, the far more dangerous Satsuma Rebellion of 1877, headed by the ex-loyalist leader Saigō Takamori, who had taken umbrage at the ultra-European leanings of his colleagues, and the Saitama insurrection of 1884. Radical discontent, too, had been kept in check by stringent regulations concerning the press and public meetings, and by the “Peace Preservation Act” which banished numerous agitators and suspects from the capital; and foreign relations with the neighbouring Asiatic states had been conduct-

ed with vigour, the Formosan pirates having been chastised by an armed Japanese force in 1874, and Luchu annexed by diplomatic means in 1879. During these years of breathless activity, Europeanisation was sometimes pushed into finical details. For instance, our dreary philistine institution of exhibitions was swallowed at a gulp,—yards of tape, cakes of soap, etc., all complete,—and brand-new orders of knighthood (1875) and aristocracy (1884) were created,—sickly plants surely, which, at this fag-end of the nineteenth century, may vègetate but cannot flourish.

The failure, in 1887, of long-protracted negotiations for treaty revision made of that year a turning-point in modern Japanese history. A strong reaction set in against foreigners and their ways, which has lasted ever since, leading occasionally to murderous attacks on foreign residents and even to one on the present Czar of Russia, who happened, as Czarewitch, to be visiting Japan in 1891. Notwithstanding reaction, however, a long-promised Constitution, modelled to some extent on that of Prussia, was granted in 1889. Unfortunately it failed from the very beginning to work smoothly, and summary suspension, following on violent altercations, has come to be looked forward to as the most likely fate of the yearly session, while the gradual consolidation of divers political parties in the state has helped to induce considerable exacerbation of feeling. Besides the promulgation, from time to time, of the new codes (see Article on Law), the most important administrative events of the last few years have been the promulgation of the Local Self-Government Act in 1888, the granting of bounties for navigation and shipbuilding in 1896, and the adoption of the gold standard in 1897. In international politics, the revision of the treaties with the various great powers calls for prominent notice. That with England was concluded first, in August, 1894, with the United States a few months later, Russia in 1895, Germany in 1896. Those with France and Austria are still under discussion,

In the summer of 1894, the Japanese government suddenly and silently despatched to the mainland of Asia a large body of troops, who occupied Korea and seized the persons of the king and royal family, "with the object"—so it was officially stated—"of maintaining Korean independence," thence proceeding to make war on China, "in order to establish the peace of the Orient." (!) The quaint humour of these alleged reasons might provoke amusement, were the subject a less tragic one than the infliction of measureless misery, pain, and desolation on unoffending neighbours. But not we of Europe have any right to throw the first stone at the Japanese. All wars save those of national defence are unjust, in the West no less than in the East; and though Japan evidently lacked *moral* justification for her proceeding, the science of statecraft as understood in the present imperfect stage of human culture must approve her action. The war grew naturally out of the condition of Japan herself at that particular juncture. Perpetual dissensions between the Diet and the executive were fast putting the working of the new Constitution out of gear,—straining it in fact to breaking point. Meanwhile the admirably trained army, like a racer panting for its trial of speed, had long been impatient for a fight with some one, somewhere, anywhere. To these motives was superadded the desire—now that treaty revision with all the foreign powers was imminent—of abolishing an inconvenient early treaty with China, and above all, the longing to make a figure in the world, to show Russia and England that Japan was no mere playground for esthetically disposed tourists, but a great power, *the* great power of the East. Surely here were reasons enough. Plausible excuses for taking offence, if one is on the look-out for doing so, are never lacking between close neighbours, nor were they far to seek on this occasion between neighbours so mutually antipathetic in temper as the progressive, mercurial islanders and the conservative continentals. The result brilliantly justified the

shrewd calculations of the Japanese government. Their preparations,—spread over years, but carried on so quietly that not one of the foreign legations suspected aught unusual to be in hand,—were complete in every point; their troops behaved splendidly, and the enemy generally ran away. Within a year of the inception of the war, China had been forced to cede to Japan the province of Liao-tung, besides paying a heavy indemnity; and when Russia, Germany, and France unexpectedly stepped in to forbid the cession of any territory on the Chinese mainland, the large and fertile island of Formosa was obtained instead.

The simple and ardent patriotism of the Japanese people during the war was as admirable as the statecraft of their rulers:—they moved as one man. Whatever troubles Japan may have in store for her,—troubles financial perhaps, complications with foreign powers, troubles arising from the constant yearning of small but influential sections of her people for radical changes in government,—one thing is certain:—the late war has made for stability and for safety, for increased commerce, increased influence, and national self-respect. New Japan has come of age.

\* \* \* \* \*

It is not possible to conclude this sketch of Japanese history by the usual formula, "Books Recommended,"—for the reason that there are none to recommend. The chapters devoted to history in the works of Griffis, Rein, etc., hold, it is true, a respectable position as embodying the usual traditional account of the subject. Adams' work, too, is good in its way, though the title, *A History of Japan*, is a misnomer, the book being in fact an account of the foreign relations of the Japanese government from 1868 to 1871. Dr. Murray's *Japan*, in the "Story of the Nations Series," marks an advance. But a critical history of Japan remains to be written,—a work which should do for every

century what Mr. Aston has done for the earliest centuries only.<sup>4</sup> Here more than anywhere else is it necessary to listen at back-doors, to peep through conventional fences, and to sift native evidence by the light of foreign testimony. We should know next to nothing of what may be termed the Catholic episode of the sixteenth and seventeenth centuries, had we access to none but the official Japanese sources. How can we trust those same sources when they deal with times yet more remote? There seems little doubt that the ruling powers at any given time manipulated both the more ancient records and the records of their own age, in order to suit their own private ends. Sometimes, indeed, the process may have been almost unconscious. The modern Japanese themselves are beginning to awake to these considerations, so far as the centuries immediately preceding their own are concerned. Mr. Shigeno An-eki, for instance, the greatest living authority on Japanese history, has undertaken to prove how certain historical episodes were "cooked" under the Tokugawa dynasty of Shōguns. But the process of "cooking" still persists, as may be seen by any critical pair of eyes that will take the trouble to examine contemporary official documents, and more especially the text-books published for use in the schools. Quite interesting is the naiveté of the effort so to trim and pare the records of the past as to make it appear that the spirit now ruling the nation has been, to use a consecrated phrase, "unbroken for ages eternal."

A little reflection will show that such manipulations of history are likely to be the rule rather than the exception in Oriental countries. The love of truth for truth's sake is not a general human characteristic, but one of the exceptional traits of the modern European mind, developed slowly by many causes,

---

<sup>4</sup> See his essay entitled *Early Japanese History*, printed in Vol. XVI. Part I. of the "Asiatic Transactions," and his elaborately annotated translation of the "*Nihon-gi*," published by the Japan Society in 1896. The former approaches the subject chiefly from the Chinese, the latter from the native, side.

chiefly by those habits of accuracy which physical science does so much to foster. The concern of ancient peoples and of Oriental peoples has always been, not so much truth as edification. Outside Europe and her colonies it is easy to manipulate records, because such manipulation shocks no one deeply, because the people are told nothing about the matter, and because, even if they were told, they have neither the means nor the inclination to be critical.

**Incense Parties.** There is an elaborate ceremonial called *kiki-kō*, or "incense-sniffing," that has been a favourite ever since A. D. 1500, and still counts its votaries among esthetically minded persons. The gist of it is this:—The host produces, from among a score of different kinds of incense, five kinds, to each of which he affixes at pleasure a new name founded on some literary allusion, and each name receives a number. The various kinds are then burnt in irregular order, sometimes in combinations of two or three kinds; and the guests have to write down the corresponding numbers on slips of paper by means of certain signs symbolical of the chapters in a celebrated classical romance called *Genji Mono-gutari*. He who guesses best wins a prize. When the nose gets jaded by much smelling, it is restored to normal discrimination by means of vinegar.

All this will sound to the foreign reader like an innocent, not to say insipid, little *jeu de société*, such as might suggest itself to a party of school-girls. But remember that Old Japan was in its childhood,—its second childhood. The art, the science, the mystery of incense-sniffing was practised by priests, Daimyōs, and other reverend seigniors. The incense-burners and other utensils employed were rare works of art, the meetings were conducted with grave etiquette, serious treatises have been written on the subject,—in a word, incense-sniffing, coming next to the tea ceremonies in the estimation of men of taste, was a pastime at once erudite and aristocratic, and one which no Japanese would ever have thought of joking about. Nor

need a European joke about it. Have we not rather cause for wonder, perplexity, almost awe, in the spectacle of a nation's intellect going off on such devious tracks as this incense-sniffing and the still more intricate tea ceremonies, and on bouquets arranged philosophically, and gardens representing the cardinal virtues? Such strict rules, such grave faces, such endless terminologies, so much ado about nothing!

This article, read together with the Articles on ESOTERICISM and the TEA CEREMONIES and portions of those on FLOWERS and GARDENS, will afford a glimpse into a singular phase of the Oriental character,—its proneness to dwell on subjects simply because they are old and mysterious, its love of elaborately conceived methods of killing time.

**Industrialism** has leapt into existence in this land which, only thirty years ago, was divided between an exclusive aristocracy and a humble peasantry, both extremely simple in their tastes. Now almost every town has its sheaf of smoke-stacks, fifteen hundred breaking the sky-line in Ōsaka alone. But why attempt to give statistics which a few weeks will turn into ancient history? Already the cotton-mills threaten formidable rivalry to Lancashire. Not a month passes without seeing new manufactories of cement, carpets, soap, glass, umbrellas, hats, matches, watches, bicycles, smelting works, electrical works, steel foundries, machine shops of every sort. Nor is everything left to private enterprise; government steps in with liberal bounties. The silk industry, once confined to certain narrow districts, is fast spreading over the entire centre and south. Formerly the Nakasendō was an old-world trail among the mountains. The last time we travelled along the new, finely graded carriage road, we were wakened every morning by the scream of the factory whistle. Journeying on and reaching the town of Kōfu, we found its silk filatures to be now its most noteworthy sight, troops of girls coming in at five every morning and working straight on till eight at night,—fifteen hours at a stretch!

The cloud of discontent that has darkened industrialism in the West already begins to obscure the Japanese sky. The "rights of labour" are asserting themselves. We hear of frequent strikes, than which nothing can be imagined further from the whole mental attitude of the working class of even ten years ago. For them, as for subjects generally, the watchword was, not rights, but duties. Now quite a new spirit is abroad. The spread of this spirit, the sudden rise in prices and consequently in wages since the war, and the adoption of a gold standard threaten to affect Japanese industrialism most unfavourably. To European labour, on the other hand, a sudden check due to this combination of causes would be nothing less than a godsend, by nipping Far-Eastern competition in the bud, or at least diminishing its intensity. True, there remain "China's millions" to be counted with.

Two or three of the characteristically Japanese industries, or rather arts—for arts they were—such as lacquer and wood-engraving, have been treated separately in this book. But to walk amidst the din of sledge-hammers and the smoke of factory chimneys is not to our taste, neither have we the talent to discourse of the fourteen hundred odd Japanese banks, or of the brand-new insurance companies, or of the joint-stock companies which, after all, are not things Japanese, but things European transplanted.

**Book recommended.** *The British Consular Trade Reports.*

**Japan.** Our word "Japan," and the Japanese *Nihon* or *Nippon*, are alike corruptions of *Jih-pên*, the Chinese pronunciation of the characters 日本, literally "sun-origin," that is, "the place the sun comes from,"—a name given to Japan by the Chinese on account of the position of the archipelago to the east of their own country. Marco Polo's *Zipangu* and the poets' *Cipango* are from the same Chinese compound, with the addition of the word *kuo* 國, which means "country."

The name *Nihon* ("Japan") seems to have been first officially employed by the Japanese government in A. D. 670. Before that time, the usual native designation of the country was *Yamato*, properly the name of one of the central provinces. *Yamato* and *Ō-mi-kuni*, that is, "the Great August Country," are the names still preferred in poetry and *belles-lettres*. Japan has other ancient names, some of which are of learned length and thundering sound, for instance, *Toyo-ashi-wara-no-chi-aki-no-naga-i-ho-aki-no-mizu-ho-no-kuni*, that is, "the-Luxuriant-Reed-Plains-the-Land-of-Fresh-Rice-Ears-of-a-Thousand-Autumns-of-Long-Five-Hundred-Autumns." But we shall not detain the reader with an enumeration of them. Any further curiosity on this head may be satisfied by consulting the pages of the "*Kojiki*." (See *Asiatic Transactions*, Vol. X. Supplement.)

**Japanese People (Characteristics of the).** Any account of the characteristics of a people must deal with two main points, namely, physical characteristics and mental characteristics. We will first say a few words about the physical characteristics, referring those who desire exhaustive information to Dr. Baelz's admirable monograph entitled *Die Körperlichen Eigenschaften der Japaner*, printed in Parts 28 and 32 of the "German Asiatic Transactions."

**I. PHYSICAL CHARACTERISTICS.** As stated in the Article entitled *RACE*, the Japanese are Mongols, that is, they are distinguished by a yellowish skin, straight black hair, scanty beard, almost total absence of hair on the arms, legs, and chest, broadish prominent cheek-bones, and more or less obliquely set eyes. These, with the other characteristics to be mentioned presently, are common both to the more slenderly built, oval-faced aristocracy, and to pudding-faced Gombai, the "Hodge" of Japanese Arcadia. Compared with people of European race, the average Japanese has a long body and short legs, a large skull with a tendency to prognathism (projecting jaws), a flat nose, coarse hair, scanty eye-lashes, puffy eyelids,

a sallow complexion, and a low stature. The average stature of Japanese men is about the same as the average stature of European women. The women are proportionately smaller. The lower classes are mostly strong, with well-developed arms, legs, and chests. The upper classes are too often weakly.

The above description will perhaps not be considered flattering. But it is not ours; it is the doctors'. Then, too, ideals of beauty differ from land to land. We Anglo-Saxons consider ourselves a handsome race. But what are we still, in the eyes of the majority of the Japanese people, but a set of big, red, hairy barbarians with green eyes?

The Japanese women are, on the whole, handsomer than the men, and have, beside, pretty manners and charming voices.\* Village beauties are rare, most girls of the lower class with any pretensions to good looks being, as it would seem, sent out to service at tea-houses in the towns, or else early obtaining husbands. Japanese children, with their dainty little ways and old-fashioned appearance, always insinuate themselves into the affections of foreign visitors. Old and young alike are remarkable for quietness of demeanour. The gesticulations of a southern European fill them with amazement, not to say contempt, and fidgeting of every kind is foreign to their nature.

The Japanese age earlier than we do. It has also been asserted that they are less long-lived; but this is doubtful. If statistics may be trusted, the number of octogenarians, nonagenarians, and even centenarians is fairly high. In Japan, as in other countries, the number of very old women considerably exceeds that of the very old men. The diseases which make most havoc are consumption, diseases of the digestive

---

\* For a detailed analysis of the Japanese standard of female beauty, see Miss Bacon's *Japanese Girls and Women*, pp. 58-60, where also the true remark is made that foreigners long resident in Japan find their standard gradually change, "and see, to their own surprise, that their country-women look ungainly, fierce, aggressive, and awkward among the small, mild, shrinking, and graceful Japanese ladies."

organs, and the peculiar affection called *kakke*, of which an account will be found in a separate article. The Japanese have less highly strung nerves than we Europeans. Hence they endure pain more calmly, and meet death with comparative indifference.\*

II. MENTAL CHARACTERISTICS. The tape-line, the weighing-machine, the craniometer, and the hospital returns give means of ascertaining a nation's physical characteristics which almost any one can apply and which none may dispute. Far different is it when we try to gauge the phenomena of mind. Does a new-comer venture on the task? He is set down as a sciolist, a man without experience—the one thing declared needful. Does an old resident hold forth, expecting his experience to command attention? The *Globe-trotter journalist* from London, or maybe the cultured Bostonian literary critic, jumps upon him, tells him that living too long in one place has given him mental myopia, in other words has rendered his judgment prejudiced and worthless. The late Mr. Gifford Palgrave said, in the present writer's hearing, that an eight weeks' residence was the precise time qualifying an intelligent man to write about Japan. A briefer period (such was his ruling) was sure to produce superficiality, while a longer period induced a wrong mental focus. By a curious coincidence, eight weeks was the exact space of time during which that brilliant conversationalist and writer had been in Japan when he delivered himself of this oracle.

---

\* We have classed indifference to death among the *physical* characteristics, because none can doubt that a less sensitive nervous system must at least tend in that direction. It is possible, however, that opinions and beliefs have had some influence in the matter. Most Japanese are either agnostics looking forward to no hereafter, or they are Buddhists; and Buddhism is a tolerant, hopeful creed, promising rest at last to all, even though it may have to be purchased by the wicked at the price of numerous transmigrations. Christianity, on the other hand, with its terrible doctrine of final and hopeless perdition, may have steeped in a still more sombre hue the naturally excitable and self-questioning European mind. The Greeks and Romans appear to have braved death with an indifference to which few moderns can attain.

Again, are you in the Japanese service, and do you praise Japan? Then you must be a sycophant. Do you find fault with it? "Ah! don't you know?" it will be said, "when they renewed his engagement the other day, they cut his salary down \$50 a month." Worst of all is it if you are a Yokohama merchant. Then you are informed flatteringly that you are an ignoramus, a "dollar-grinder," and that, as you never see any Japanese of the better class, but only coolies and hucksters, what you are pleased to call your opinion is a mere impertinence worth less than nothing.

All things considered, the would-be critic of Japanese mind, manners, and morals has a thankless task before him. The present writer feels that he cannot hope to escape being classed in some one or other of the above-named categories of persons not fit to have an opinion of their own. He has, therefore, decided to express none at all, but simply to quote the opinions of others. Perhaps he may thus avoid blame and unpleasantness. He has chosen the opinions impartially, or rather he has not chosen them, but taken them anyhow, as they happened to come uppermost in his scrap-book. He has not, it is true, thought fit to include all or any of the absurdities of the casual passer-by; — one French count, for instance, a stripling of twenty, who spent just three months in the country and then wrote a book about it, sums up his acquired wisdom in the tremendous assertion, "*Le japonais n'est pas intelligent.*" Of recent trash of this kind there is enough to fill many volumes. But who would care to read it? The opinions which we quote will be seen to be in some cases judgments of the people, in others judgments of the country. But it is not practicable to separate one class from the other:—

"This nation is the delight of my soul." (ST. FRANCIS XAVIER, middle of sixteenth century.)

"The people of this Iland of *Iapon* are good of nature, curteous aboue measure and valiant in warre: their iustice is

seuerely executed without any partialitie vpon transgressors of the law. They are gouerned in great ciuilitie. I meane, not a land better gouerned in the world by ciuil policie. The people be verie superstitious in their religion, and are of diuers opinions."—This last sentence does not fit the present day. No one now accuses the Japanese of superstitious religionism. Our author is again in touch with modern times when he speaks of "the peopell veri subiect to thear gouernours and superiores."

(WILL ADAMS, early in the seventeenth century.)

" Bold,.....heroic,.....revengeful,.... ...desirous of fame, .....very industrious and enured to hardships,.....great lovers of civility and good manners, and very nice in keeping themselves, their cloaths and houses, clean and neat.....As to all sorts of handicrafts, either curious or useful, they are wanting neither proper materials, nor industry and application, and so far is it, that they should have any occasion to send for masters from abroad, that they rather exceed all other nations in ingenuity and neatness of workmanship, particularly in brass, gold, silver and copper.....Now if we proceed farther to consider the Japanese, with regard to sciences and the embellishments of our mind, Philosophy perhaps will be found wanting. The Japanese indeed are not so far enemies to this Science, as to banish the Country those who cultivate it, but they think it an amusement proper for monasteries, where the monks leading an idle lazy life, have little else to trouble their heads about. However, this relates chiefly to the speculative part, for as to the moral part, they hold it in great esteem, as being of a higher and divine origin.....I confess indeed, that they are wholly ignorant of musick, so far as it is a science built upon certain precepts of harmony. They likewise know nothing of mathematicks, more especially of its deeper and speculative parts. No body ever cultivated these sciences but we Europeans, nor did any other nations endeavour to embellish the mind with the clear light of mathematical and demonstrative reasoning.

... ..They profess a great respect and veneration for their Gods, and worship them in various ways : And I think I may affirm, that in the practice of virtue, in purity of life, and outward devotion, they far out-do the Christians : Careful for the Salvation of their Souls, scrupulous to excess in the expiation of their crimes, and extremely desirous of future happiness..... Their Laws and Constitutions are excellent, and strictly observed, severe penalties being put upon the least transgression of any.” (ENGELBERT KAEMPFER, end of seventeenth century.)

SIR RUTHERFORD ALCOCK, one of the most acute writers on Japan, is also one of the most difficult to quote, as his whole book, *The Capital of the Tycoon*, is one continued criticism of the Japan of his time (about 1860), and one would like to transcribe it all. Here are a couple of his witty sayings :

“(Japan) is a very paradise of babies.”

“There is a mistake somewhere, and the result is that in one of the most beautiful and fertile countries in the whole world the flowers have no scent, the birds no song, and the fruit and vegetables no flavour. One of my colleagues gave the characteristics of the country in another trilogy, which I am bound to say was not inferior in accuracy, if less poetical. ‘Women wearing no crinoline, houses harbouring no bugs, and the country no lawyers.’ The last is perhaps the most astonishing of the whole.”

Sir Rutherford speaks, in his preface, of “the incorrigible tendency of the Japanese to withhold from foreigners or disguise the truth on all matters great and small.” Yet he allows that they are “a nation of thirty millions of as industrious, kindly, and well-disposed people as any in the world.”—Their art, too, rouses his admiration, though he makes a reservation to the effect that there are some departments in which they have failed to produce anything to be named in the same day with the works of the great artists of Europe. “Perhaps in nothing,” says he, “are the Japanese to be more admired than for the wonderful

genius they display in arriving at the greatest possible results with the simplest means, and the smallest possible expenditure of time and labour or material. The tools by which they produce their finest works are the simplest, and often the rudest that can be conceived. Wherever in the fields or the workshops nature supplies a force, the Japanese is sure to lay it under contribution, and make it do his work with the least expense to himself of time, money, and labour. To such a pitch of perfection is this carried, that it strikes every observer as one of the moral characteristics of the race, indicating no mean degree of intellectual capacity and cultivation."

"In moral character, the *average* Japanese is frank, honest, faithful, kind, gentle, courteous, confiding, affectionate, filial, loyal. Love of truth for its own sake, chastity, temperance, are not characteristic virtues." (REV. W. E. GRIFFIS, in *The Mikado's Empire*.)

"Surely, for happiness, gentleness, and sobriety, for soft-voiced and always smiling chatter, for the blessed faculty of inhaling healthful enjoyment from the simplest things.... no other country can even profess to show the match of a festival crowd in Japan.....Police in such a throng, it seems to us, can have no more to do than the lilies of the valley." (MAJOR-GENERAL PALMER, R. E., in the *Japan Daily Mail*.)

"The lack of originality of the Japanese is very striking after one has got over one's first dazzle at strange antipodal sights. Modification of foreign motif, modification always artistic, and at times delightfully ingenious, marks the extent of Japanese originality.....A general incapacity for abstract ideas is another marked trait of the Japanese mind..... Lastly, the decorous demeanor of the whole nation betrays the lack of mental activity beneath. For it is not rules that make the character, but character that makes the rules. No energetic

mind could be bound by so exquisitely exacting an etiquette." (PERCIVAL LOWELL, in *Occult Japan*).

In discussing their Japanese neighbours, the foreign residents frequently advert to the matter-of-fact way of looking at things which characterises all the nations that have come under Chinese influence. The EDITOR of the "JAPAN MAIL" has drawn an acute distinction between the *matter-of-fact* Japanese and the *practical* European, instancing the calculations of a pamphleteer anent a projected line of railway, the probable yearly profits of which were worked out to decimals of a cent! The matter-of-fact Japanese calculator simply transferred to his pamphlet the figures that came out on his abacus. The practical (because also theoretical) European knows that such apparent exactness is illusory. We have ourselves often seen, when travelling through various provinces of Japan, the distances along roads (in one instance across a wide strait of the sea) given, not only down to feet, but down to *inches*.

Here are a few shorter dicta on the land and its people:—

"They impress me as the ugliest and the most pleasing people I have ever seen, as well as the neatest and most ingenious." (MISS BIRD, in *Unbeaten Tracks in Japan*.)

"The land of gentle manners and fantastic arts." (SIR EDWIN ARNOLD, in the *Daily Telegraph*.)—The same author says of the Japanese: "They have the nature rather of birds or butterflies than of ordinary human beings..... They will not and cannot take life *au grand sérieux*." [What of the late war, and of the recent immense extension of commerce? There is surely nothing very bird-like or butterfly-like in these.]

"Japan has proved too much for Europeans. She has turned the tables on them, and exploited the exploiters." (MR. W. R. LAWSON, in the *London Daily Mail*.)

"The land indeed of the sunrise, but also the land of the sunset of romance." (CURT NETTO, in *Papierschmetterlinge aus Japan*.)

"*Le Japon d'aujourd'hui c'est une traduction mal faite.*" (A RESIDENT DIPLOMAT, quoted in one of MR. HENRY NORMAN'S letters on Japan to the *Pall-Mall Gazette*.)

"The land of disappointments." (AN OLD RESIDENT in the Japanese service.)

"We should say..... that the most striking quality of the Japanese is precocity, that the keenness of their perceptions is far in advance of the soundness of their judgments, that their minds, or rather the minds of their leading classes, are always on the rush, that they receive ideas and lay aside ideas much as acute youngsters do.....The Japanese upper class strike us, in fact, as the undergraduates of the human family, clever, enjoying, and full of 'go,' but as yet immature.....They love change for the sake of change, take up ideas because they are startling to their seniors or to their Government or to themselves, and suffer none of them to really dye their minds with any permanent colour.....They are open to all teachings, which, however, go about one inch deep.....They devise a constitution which does not work, except so far as it is sustained by the old fact of the Mikado's authority; they start a Press which discusses everything in the spirit of an undergraduate's wine-party; they even adopt a new costume and live in constricting uniforms before the majority have given up the habit of living in a loin-cloth.....[The Japanese] has an enormous respect for the words of ancient philosophers and European writers, will quote them, as our countrymen quote proverbs, as if they ended discussion; but he does not all the while absorb this wisdom, and will pass from believing in, say, St Augustine, to believing in, say, Mr. Grant Allen at a bound, and with no sense that he

is exhibiting volatility of intellect." (From an article in the *SPECTATOR* of the 5th December, 1896, founded on numerous appreciations forwarded by a twenty years' resident.)

PIERRE LOTI, in his *Madame Chrysanthème* and *Japoneries d'Automne*, emphasises over and over again one particular aspect of Japanese life—its smallness, its quaintness, its comicality. Here are just a few samples of the adjectives which he sows broadcast over his pages, almost exhausting the resources of the French language in that direction: *petit, bizarre, disparate, hétérogène, invraisemblable, mignon, bariolé, extravagant, inimaginable, frêle, monstrueux, grotesque, mièvre, exotique, lilliputien, minuscule, maniéré*, etc., etc. The houses are all *maisonnettes*; each garden is, not a *jardin*, but a *jardinet*; each meal a *dînette*, each inscription a *griffonnage*. The Kōbe-Kyōto railway is *un drôle de petit chemin de fer, qui n'a pas l'air sérieux, qui fait l'effet d'une chose pour rire, comme toutes les choses japonaises*.—Of course there is an element of truth in all this. Query: is it the whole truth? Pierre Loti's final and sweeping condemnation of poor Japan, as he was preparing to set sail, is as follows: "*Je le trouve petit, vieillot, à bout de sang et à bout de sève; j'ai conscience de son antiquité antédiluvienne; de sa momification de tant de siècles—qui va bientôt finir dans le grotesque et la bouffonnerie pitoyable, au contact des nouveautés d'occident*."—Criticism of this bitter and unfruitful kind sets one musing on the question whether, after all, it is Japan herself that is so much at fault, or whether it may not rather be her French critic that is bloodless and sapless, too *blasé* to retain any share in that gift of sympathetic insight which is the first qualification for the understanding of any complex subject.

People are fond of drawing comparisons between the Chinese and the Japanese. Almost all seem agreed that the Japanese are much the pleasanter race to live with,—clean, kindly, artistic. On the other hand, the Chinese are universally allowed to be far more trustworthy. "I know," says Mr.

EWAN CAMERON, late Manager of the Hongkong and Shanghai Bank in Shanghai, "of no people in the world I would sooner trust than the Chinese merchant or banker.... For the last twenty-five years the bank has been doing a very large business with Chinese in Shanghai, amounting, I should say, to hundreds of millions of taels, and we have never met with a defaulting Chinaman."—Woefully different from this is the tale told by the European bankers and merchants in Japan. They complain, it is true, not so much of actual, wilful dishonesty—though of that, too, they affirm there is plenty—as of pettiness, constant shilly-shallying, unbusinesslikeness almost passing belief. Hence the wide divergence between the impressions of the holiday-making tourist, and the opinions formed by the commercial communities at the open ports. Japan, the globe-trotter's paradise, is also the grave of the merchant's hopes. Another deep-seated difference between the Chinese and the Japanese is that the former have race pride, the latter national vanity. The Chinese care nothing for China as a political unit, an abstraction, an ideal to die for if need be; but they are nevertheless inalienably wedded to every detail of their ancestral civilisation. The Japanese, though they have twice, at intervals of a millennium, thrown everything national overboard, are intense nationalists in the abstract. In fact, patriotism may be said to be their only remaining ideal. No Chinaman but glories in the outward badges of his race; no Japanese but would be delighted to pass for a European, in order to beat Europeans on their own ground. The Japanese, too, are brave; they are also unpractical. The Chinese, eminently practical folks, follow the doctrine that

He who fights and runs away,  
May live to fight another day.

The characteristic in which the Chinese and Japanese most agree (and other Far-Eastern peoples—the Koreans for example—agree in it also) is materialism. That is where the false note is struck, which, when long residence has produced

familiarity, jars on European nerves and prevents true intellectual sympathy.

MR. WALTER DENING, whose acquaintance with modern Japanese literature and with the men who produce it is probably unrivalled, writes as follows:

"It is well-known that one of the most marked characteristics of the Japanese mind is its lack of interest in metaphysical, psychological, and ethical controversy of all kinds. It is seldom you can get them to pay sufficient attention to such questions to admit of their understanding even their main outlines." And again:—

"Neither their past history nor their prevailing tastes show any tendency to idealism. They are lovers of the practical and the real: neither the fancies of Goethe nor the reveries of Hegel are to their liking. Our poetry and our philosophy and the mind that appreciates them are alike the result of a network of subtle influences to which the Japanese are comparative strangers. It is maintained by some, and we think justly, that the lack of idealism in the Japanese mind renders the life of even the most cultivated a mechanical, humdrum affair when compared with that of Westerns. The Japanese cannot understand why our controversialists should wax so fervent over psychological, ethical, religious, and philosophical questions, failing to perceive that this fervency is the result of the intense interest taken in such subjects. The charms that the cultured Western mind finds in the world of fancy and romance, in questions themselves, irrespective of their practical bearings, is for the most part unintelligible to the Japanese."

DR. BUSSE, in his elaborate essay on the Japanese ethical literature of the present day, complains of the want of thoroughness, of insight, and of original thought which inclines the leaders of Japanese opinion to a superficial eclecticism. They attack problems, says he, with a light heart, because not appreciating their true difficulty.

One more quotation only. It is from the REV. G. M. MEACHAM, a missionary of many years' standing, and epitomises what hundreds of residents have thought and said :—

“ A few months do not suffice to give a correct understanding of the situation, though the visitor should enjoy the kind attention and guidance of high officials. There are perhaps no people under heaven who know better the happy art of entertaining their guests, and none perhaps who succeed better in preoccupying them with their views. Indeed, the universal experience of those who remain long enough in this country to see beneath the surface is that first impressions are very deceitful.”

To sum up: the average judgment formed by those who have lived some time among the Japanese, seems to resolve itself into three principal items on the credit side, which are cleanliness, kindness, and a refined artistic taste, and three items on the debit side, namely, vanity, unbusinesslike habits, and an incapacity for appreciating abstract ideas.

So far this little symposium on the mental characteristics of the Japanese. Anyone who thinks it not full enough or not representative enough, is earnestly requested to supplement it, either from his personal experience or from his reading. For our own part, we cannot but feel surprise at the way in which, like sheep jumping over a fence, one writer after another has enlarged on certain traits as characteristic of the Japanese nation, which history shows to be characteristic merely of the stage through which the nation is now passing. Their modern fervour of loyalty is a good case in point:—Europe manifested exactly the same symptom on her emergence from feudalism.

Just one consideration more:—how do *our* characteristics strike the Japanese? From hints dropped by several of the

educated, and from the still more interesting, because frankly naive, remarks made by Japanese servants whom the present writer has taken with him to Europe at different times, he thinks he may state that the travelled Japanese consider our three most prominent characteristics to be dirt, laziness, and superstition. As to the comparative dirtiness, there can be no doubt in any unprejudiced mind. You yourself, honoured Madam, of course take your tub regularly every morning. But are you so sure that your butler, your coachman, even your lady's maid, as regularly take theirs? Again, what is a stranger who hails from a land of fifteen working hours daily and of well-nigh three hundred and sixty-five working days yearly, to conclude from the habits of European artisans and servants, from post-offices closed on Sundays either totally or during portions of the day, etc., etc.? With regard to superstition, that is a matter of individual opinion. Of our poetry, our music, our metaphysics, our interest in all manner of things scattered over the two worlds of sense and thought, the Japanese visitor to Western lands can naturally notice little and appreciate less. Neither our pictures nor our cathedrals touch any chord in his heart. On the other hand, all our materially useful inventions are already shared by his countrymen, who work them—if not quite as well—at any rate more cheaply than we do, and in ways more suitable to their peculiar needs. For all these reasons, Europe and America make a far less favourable impression on the Japanese visitor than seems to be generally expected. Be he statesman or be he valet, he is apt to return to his native land more patriotic than he left it. (See also Article on WOMAN.)

**Books recommended.** *The Soul of the Far East*, by Percival Lowell, written to prove that the Japanese mind is impersonal. Excepting a short paper by Walter Dening, in Vol. XIX. of the *Asiatic Transactions*, we are acquainted with no other work treating explicitly of the mental characteristics of the Japanese; but Lafcadio Hearn's books are a perfect mine for the enquirer to dig in. To residents in Japan the Rev. Arthur H. Smith's somewhat sombre book, entitled *Chinese Characteristics*, should prove fruitful reading, by way both of likeness and of contrast.

**Jinrikisha.** The origin of the jinrikisha is, to use a grandiloquent phrase, shrouded in obscurity. One native account attributes the spark of invention to a paralytic old gentleman of Kyōto, who, some time before 1868, finding his palanquin uncomfortable, took to a little cart instead. According to another version, one Akiha Daisuke, of Tōkyō, was the inventor, about 1870; but the first official application to be allowed to manufacture jinrikishas was made about the same time by a man called Takayama Kōsaku. The usual foreign version is that an American named Goble, half-cobbler and half-missionary, was the person to suggest the idea of a modified perambulator somewhere about 1867; and this has the support of Mr. Black, the author of "Young Japan." In any case, the invention, once made, found wide-spread favour. There are now over 39,000 jinrikishas and 45,000 jinrikisha-men in Tōkyō alone; and the ports of China and of the Malay peninsula, as well as Japan, owe to the jinrikisha a fruitful source of employment for their teeming coolie population and of comfort for the well-to-do residents.

The compound word *jin-riki-sha* (人力車) means literally "man-power-vehicle," that is, a vehicle pulled by a man, or, as the late Mr. Baber wittily suggested, a "Pull-man-car." Some have imagined *sha* to be a corruption of the English "car." This is quite erroneous. *Sha* is a good old Chinese word. The poor word "jinrikisha" itself suffers many things at the hands of Japanese and foreigners alike. The Japanese generally cut off its tail and call it *jinriki*, or else they translate the Chinese syllable *sha* into their own language, and call it *kuruma*. The English cut off its head and maltreat the vowels, pronouncing it *rickshaw*. One English dictionary actually gives it as *jennyrickshaw*!

The total cost of the outfit of a jinrikisha-man—coat, drawers, hat, and lantern all complete, is estimated at from \$2.50 to \$5. His usual pay is from 10 to 20 *sen* per *ri* (2½ miles English).

The heroes of the jiniikisha world are two men called Mukōbata and Kitaga, who, in May, 1891, saved the life of the then Czarewitch (the present Czar) from an assassin's sword, and were forthwith almost smothered under the rewards and honours that poured down upon them, alike from their own sovereign and from the Russian court.

**Kaempfer.** If Marco Polo was the first to bring the existence of such a country as Japan to the knowledge of Europeans, and Mendez Pinto the first to tread its shores, Engelbert Kaempfer (1651—1716) may truly be called its scientific discoverer. A native of Lemgow in Westphalia, he travelled while a youth in North Germany, Holland, and Poland. At the age of thirty-two he joined the Swedish diplomatic service as secretary of legation, in which capacity he proceeded through Russia and Tartary to the court of Ispahan. Eager for a sight of yet more distant lands, he then entered the service of the Dutch East India Company in the capacity of surgeon, sailed from Ormuz to Batavia in 1688, and thence viâ Siam to Japan, where he arrived in the month of September, 1690. At that time, the Dutch were the only European nation permitted to trade with Japan, and even they were confined to Deshima—a part of Nagasaki—where jealous care was taken by the authorities to keep them in ignorance of all Japanese matters. A yearly journey to Yedo to make obeisance before the Shōgun was the only change in their monotonous existence.

Kaempfer remained in Japan but two years and two months. Yet, in this short period and under these disadvantageous circumstances, he compiled a work which for the first time gave the world fairly accurate information concerning the history, geography, religious beliefs, manners and customs, and natural productions of the mysterious Island Empire. Returning to Europe in 1694, Kaempfer settled, first at Leyden and then in his native town, where he employed himself in writing his two celebrated works, the *History of Japan* and the *Amamitates*

*Exotica*, in practising as a physician, and in quarrelling with the odious wife whose bad temper is said to have aggravated the fits of colic which ended in his death.

The *History of Japan* appeared, strange to say, first in an English translation in 1727—8; then in Latin (1728), Dutch (1729), and French (1729). All these were translated from the English version. Lastly, in 1777, came a German edition—not exactly the German original, because Kaempfer's style was so terribly dry and involved as to make the booksellers fear that it would disgust even the German public, long-suffering as the German public is in that respect. The diction was accordingly modernised and touched up. Hence Kaempfer's work has never appeared in Kaempfer's words. Copies of all the editions are now rare, and command high prices at auction.

**Kakke.** *Kakke* is the same disease as that known in India and the Malay peninsula under the name of *beri-beri*, and may be defined in popular language as a sort of paralysis, as it is characterised by loss of motive power and by numbness, especially in the extremities. It is often accompanied by dropsy. All these symptoms are due to a degeneration of the nerves, which is the main anatomical feature of the complaint. In severe cases it affects the heart, and may then become rapidly fatal. But the usual course of the disease extends over several months, and mostly ends in recovery. But he who has had one attack may expect another after an interval of a year or two. Some persons have had as many as ten or even twenty attacks, all setting in with the warm weather and disappearing in the autumn. *Kakke* attacks with special frequency and virulence young and otherwise healthy men—women much less often, scarcely ever indeed except during pregnancy and after childbirth. Children of both sexes enjoy almost absolute immunity. The disease springs, in the opinion of the best authorities, not from actual malaria, as has been sometimes imagined, but from a climatic influence resembling malaria. It

should, however, be stated that others have sought its origin in the national diet—some in rice, some in fish. In favour of this latter view is to be set the consideration that the peasantry, who often cannot afford either rice or fish, and have to eat barley or millet instead, suffer much less than the townsfolk, and the further fact that great improvement in this respect has been observed in the health of the Japanese navy ever since Dr. Takagi, late Surgeon-General, introduced a meat diet for the seamen.

The origin of *kakke* remains unexplained; but its comparative frequency in low alluvial situations, and the notable influence of crowding in propagating it, would tend to show that it is of an infectious character, even had we not the knowledge of its recent wide diffusion consequent on the opening up of new and improved methods of communication. Whether the disease is indigenous or imported, is a question that cannot yet be answered. The first mention of it occurs two hundred years ago. Then, and till about forty years ago, it was confined to a few ports on the Pacific coast of Japan and to some large cities in constant communication with those ports, such as Kyōto; and in all these localities, barracks, schools, and prisons were the places most affected. The construction of railways, steamers, and carriage roads has converted *kakke* from a local into a national scourge. Restricting itself no longer to low situations, it has invaded almost the entire country, the visitation being in some cases mysterious, in others clearly traceable to the residence of *kakke* patients, who, having been sent to the hills for change of air, have left a legacy of their disease to the inhabitants.

**Books recommended.** *Kak'ke*, by Wm. Anderson, F.R.C.S., printed in Vol. VI. Part I. of the "Asiatic Transactions" (also published in pamphlet form).—*Infectionskrankheiten in Japan*, by Dr. E. Baelz, in the "German Asiatic Transactions," Vol. III. p. 301.—*Die Japanische Kak-ke*, by Dr. B. Scheube.—*Geographisch-medizinische Studien*, by Dr. Wernich; and others in European languages, besides reports in Japanese by Drs. Takagi and Miura.

**Kakemono.** The *Kakemono*, or hanging scroll, is the form in which Japanese paintings are usually mounted. It takes the place of the framed picture of Europe; but the number of *kakemonos* displayed in any single room is limited to one, a pair, or a set of three. Custom has moreover fixed on the *tokonoma*, or alcove, as the only part of the room in which these scrolls shall be hung, and prescribes rigid rules for the dimensions and other details of the mounting.

The invention of this method of showing off pictures and preserving them—for when not displayed, the *kakemono* is always tightly rolled up and stored away—goes back to very early Chinese days. Sometimes the *kakemono* contains, instead of a picture, some valued specimen of caligraphy. For Far-Eastern painting is a sort of writing, and the writing a sort of painting, and caligraphic skill is no less esteemed than skill in the painter's art.

The *gaku* is another method of Japanese mounting for pictures, which more closely resembles the framed picture of Europe, but occupies quite a subsidiary place.

**Book recommended.** Anderson's *Pictorial Arts of Japan*, Part I. pp. 116-120, where every detail of the mounting is explained

**Kana.** See WRITING.

**Kyōto.** See CAPITAL CITIES.

**Lacquer.** It is acknowledged by all connoisseurs that in the art of lacquer the Japanese far surpass their teachers, the Chinese. This may be partly because the lacquer-tree, though also apparently introduced from China, finds in Japan a more congenial climate; but we shall scarcely err in attributing the superiority chiefly to the finer esthetic instincts of the Japanese. So exactly did lacquer-work suit their taste and talent, that they were already producing triumphs in this branch of art at an epoch when England was still rent by the barbarous struggles of the Heptarchy.

Appreciation of lacquer is a taste which has to be acquired, but which, when acquired, grows upon one, and places the best lacquer in the category of almost sacred things. To show a really fine piece casually to a new-comer, or to send it home as a gift to one of the uncultivated natives of Europe or America, is, as the Japanese proverb says, "like giving guineas to a cat." He will take it up for an instant, just glance at it, say "What a pretty little thing!" and put it down again, imagining it to be worth at most a couple of dollars. Not improbably it cost a hundred, and was the outcome of years of patient toil and marvellous art.

The material employed is the sap which exudes from the lacquer-tree (*Rhus vernicifera*) when incised. This tapping for lacquer, as it may perhaps be called, affords a means of livelihood to a special class of men, who, on the approach of mild weather in April, spread all over the northern provinces of the empire, where the best lacquer-trees grow, and continue their operations on into the autumn. The age of the tree, the season when the tree is tapped, and the treatment to which the sap is afterwards subjected—as, for instance, by being mixed with iron filings, turpentine, or charred wood—produce widely different kinds of lacquer, which are accordingly appropriated to different uses. Every species of lacquer turns black on exposure to the light; and it is a fact, mysterious but undoubtedly authentic, that lacquer dries most quickly in a damp atmosphere. The damper the atmosphere and the darker the room, so much the more quickly will the lacquer dry.

Many kinds of material admit of being lacquered. On metal, in particular, very pleasing results have been obtained. But the favourite material is wood, and the best kinds of wood for the purpose are the *hinoki* (*Chamæcyparis obtusa*) and *kiri* (*Paulownia imperialis*). The woods of the *Cryptomeria japonica* (*sugi*) and *Planera japonica* (*keyaki*) are those most used for general purposes, such as common bowls, trays, etc. The Japanese

constantly employ lacquer utensils to hold boiling soups, alcoholic drinks, and even burning cigar-ash. But so strong is the substance that it suffers little if any damage from such apparently rough treatment.

The process of lacquering is complicated and tedious. To begin with, the surface of the wood is covered with triturated hemp and glue, and then the first coating of lacquer is applied, only to be itself covered with the very finest hempen cloth. Numerous coatings of various qualities of lacquer are laid on this as a foundation. A careful drying intervenes between each coating, and a partial rubbing off with a whetstone follows each drying. A powder formed of calcined deer's horn serves in most cases to give the final polish. But all this process, of which we have merely indicated the bare outlines, is itself but preparatory if the object is to produce one of those beautiful gold-lacquered boxes which the word "lacquer" generally calls up in the mind of the European collector. In this case, writes one of the authorities quoted below.

"A thin species of paper, prepared with sizing made of glue and alum, is used. On this paper the design required to be transmitted to the lacquered article is drawn. On the reverse of this paper, the outline is lightly traced in lacquer—previously roasted over live charcoal to prevent its drying—with a very fine brush made of rat's hair. This paper is then laid on the article to be lacquered, and is rubbed with a spatula made of *hinoki* or whalebone, where the lacquer has been applied, and on removing the paper the design is observed lightly traced in lacquer.

"To make it perfectly plain, this is rubbed over very lightly with a piece of cotton wool, charged with finely powdered whetstone, or tin; this brings the pattern out white. From one tracing, upwards of twenty impressions can be taken off, and when that is no longer possible, from the lacquer having become used up, it only requires a fresh tracing over the same paper to reproduce the design *ad infinitum*. This tracing does not dry,

owing to the lacquer used for the purpose having been roasted, as previously mentioned, and can be wiped off at any time.

“ The pattern thus traced out is then filled in with ground-work lacquer, with a brush made of hare’s hair, great care being taken not to touch or paint out the original tracing line. This is then powdered over with fine gold dust, silver dust, or tin dust, according to the quality of the ware. This dust is applied with a piece of cotton wool, charged with the material to be used, and the article is then gently dusted with a very soft brush made from the long winter coat of a white horse, to remove any loose metal dust that might adhere to the article, and to slightly smoothen the surface. If the article under manufacture is large, only a small portion is done at a time, and it is at once enclosed in an air-tight press, so as to prevent any dust or outside matter adhering to the freshly lacquered surface. At the proper time, when the lacquer has sufficiently hardened, the article is taken out, and the part over which the gold dust has been sprinkled, receives a coat of transparent varnish (*suki-urushi*), laid on with a hare’s hair brush, and a further portion is prepared with a coating of gold dust, as on the previous day : the article is again closed up in the air-tight damp press as before, till dry. When the portion which has received the second coat of lacquer over the gold dust is quite hard, it is rubbed smooth with a piece of hard charcoal made from camellia wood or *hōnoki*, until the whole is level with the surrounding parts. Then it is rubbed with the finger and some finely powdered whetstone and deer’s horn, with the smallest quantity of oil, till it attains a fine polish. If upon this surface any further work takes place, such as the veining of leaves, or the painting of stamens, etc., of flowers, these are traced in lacquer and covered with gold dust, and when dry the final polish is given with the finger and powdered deer’s horn.”

Such is the most usual process, which is suitably modified in the case of raised gold lacquer and other varieties.

It should be added that much of the so-called gold or silver lacquer is really manufactured with the aid of bronze and tin, especially at the present time, when cheapness and quantity are insisted on by a foreign public whose taste is imperfectly educated. At the same time, specimens worthy of the best age still continue to be produced. Competent critics assert that Shibata Zeshin, who died as lately as 1891, was probably the greatest lacquer artist that ever lived.—The lacquer poison, of which so much has been said by travellers, is never fatal, though it is extremely painful in some cases. Blood to the head, swelling, violent itching and burning, and occasionally small festering boils, are the symptoms. Lacquer in any stage, except when perfectly dry, is capable of producing it. The lacquer tappers always use gloves as a protection.

Only one item more. If you possess any specimens of good lacquer, be careful to dust them with a fine old silk cloth. A common duster will scratch them. Some of the best collections in Europe have been ruined by bad treatment.

**Language.** Excepting the sister dialect spoken in the Luchu Islands, the Japanese language owns no kindred, and its classification under any of the recognised linguistic families remains doubtful. In structure, though not to any appreciable extent in vocabulary, it closely resembles Korean; and both it and Korean may possibly be related to Mongol and to Manchu, and might therefore lay claim to be included in the so-called "Altaic" group. In any case, Japanese is what philologists term an agglutinative tongue, that is to say, it builds up its words and grammatical forms by means of suffixes loosely soldered to the root or stem, which is invariable. Though not originally related to Chinese, Japanese has adopted an enormous number of Chinese words, such words having

naturally followed Chinese civilisation into the archipelago. Even at the present day, the Japanese language has recourse to Chinese for terms to indicate all such new things and ideas as "telegram," "bicycle," "photograph," "democracy," "natural selection," "limited liability," etc., etc., much as we ourselves have recourse to Latin and Greek. Hence a curious result:—the Europeanisation of Japanese institutions has made the language far more humbly tributary to China to-day than it ever was while Confucianism reigned supreme in the land.

The fundamental rule of Japanese syntax is that qualifying words precede the word they qualify. Thus the adjective or genitive precedes the noun which it defines, the adverb precedes the verb, and explanatory or dependent clauses precede the principal clause. The object likewise precedes the verb. The predicative verb or adjective of each clause is placed at the end of that clause, the predicative verb or adjective of the main clause rounding off the entire sentence, which is often, even in familiar conversation, extremely long and complicated. The following is an example of Japanese construction:—

Kono goro ni itarimashite,  
*This period at having-arrived,*  
 Bukkyō to mōsu mono  
*Buddhism that (they) say thing*  
 wa, tada katō-jinmin no  
*as-for, merely low-class-people 's*  
 shinjiru tokoro to natte,  
*believing place that having-become,*  
 chūto yō de  
*middle-class thence-upwards in*  
 wa sono dōri wo wakima-  
*as-for, its reason (accus) discerning-*  
 teru hito ga sukunaku; shūmon  
*are people (nom) being-few, religion*  
 to ieba, sōshiki no toki  
*that if-one-says, funeral-rite 's time*  
 bakari ni mochiuru koto no  
*only in employ thing is*  
 yō ni omoimasu.  
*manner in (they) think.*

"At the present day Buddhism has sunk into being the belief of the lower classes only. Few persons in the middle and upper classes understand its *raison d'être*, most of them fancying that religion is a thing which comes into play only at funeral services."

This one example may suffice to show how widely divergent (compared with Europe) are the channels in which Japanese thought flows. Nor is it merely that the idioms differ, but that the same circumstances do not draw from Japanese speakers remarks similar to those which they would draw from European speakers. In accordance also the dissimilarity is remarkable. Japanese nouns have no gender or number, Japanese adjectives no degrees of comparison, Japanese verbs no person. On the other hand, the verbs have peculiar complications of their own. They have a negative voice, and forms to indicate causation and potentiality. There is also an elaborate system of honorifics, which replaces to a certain extent the use of person in the verb and makes good the absence of personal pronouns.

The Japanese vocabulary, though extraordinarily rich and constantly growing, is honourably deficient in terms of abuse. It affords absolutely no means of cursing and swearing. A less excellent negative quality is the absence of personification,—a characteristic so deep-seated and all-pervading as to interfere even with the use of neuter nouns in combination with transitive verbs. Thus this language rejects all such expressions as “*the heat makes me feel languid*,” “*despair drove him to commit suicide*,” “*science warns us against over-crowding*,” “*quarrels degrade those who engage in them*,” etc., etc. One must say, “being hot, I feel languid,” “having lost hope, he killed himself,” “on considering, we find that the fact of people’s crowding together is unhealthy,” and so on,—the idea being sufficiently rendered no doubt, but at the expense of verve and picturesqueness. Nor can any one fully realise how picturesque our European languages are, how saturated with metaphor and lit up with fancy, until he has familiarised himself with one of the tamer tongues of the Far East. Poetry naturally suffers more than prose from this defect of the language. No Japanese Wordsworth could venture on such metaphorical lines as

" If *Thought and Love desert us*, from that day  
 Let us break off all *commerce with the Muse* :  
 With *Thought and Love companions of our way* -  
 Whate'er the senses take or may refuse,—  
 The *Mind's internal heaven shall shed her dews*  
 Of *inspiration* on the humblest lay "

In fact, most metaphors and allegories are incapable of so much as intelligible explanation to Far-Eastern minds.

Japanese—with its peculiar grammar, its still uncertain affinities, its ancient literature—is a language worthy of more attention than it has yet received. We say "language," but "languages" would be more strictly correct, the modern colloquial speech having diverged from the old classical tongue almost to the same extent as Italian has diverged from Latin. The Japanese still employ in their books, and even in correspondence and advertisements, a dialect which is partly classical and partly artificial. This is what is termed the "Written Language." The student therefore finds himself confronted with a double task. Add to this the necessity of committing to memory two syllabaries, one of which has many variant forms, and at least four thousand Chinese ideographs in forms standard and cursive,—ideographs, too, most of which are susceptible of three or four different readings according to circumstances,—add further that all these kinds of written symbols are apt to be encountered pell-mell on the same page, and the task of mastering Japanese becomes almost herculean. Fortunately the pronunciation is easy, and there is no difficulty in acquiring a smattering that will greatly enhance the pleasure and comfort of those who reside or travel in the country. (See also Articles on LITERATURE and WRITING.)

Munzinger's essay entitled *Die Psychologie der Japanischen Sprache*, published in Part 53 of the "German Asiatic Transactions," will interest the philological specialist

**Law.** Dutifully obedient to authority and not naturally litigious, the Japanese are nevertheless becoming a nation of lawyers. No branch of study is more popular than law with the young men of the present generation. Besides being often a stepping-stone to office, it seems to have for them a sort of abstract and theoretical interest; for (and more's the pity) Japanese law has at no time been the genuine outcome of the national life, as English law, for instance, is the outcome of English national life—a historical development fitting itself to the needs of the nation as a well-made glove fits the hand. Twelve hundred years ago Japan borrowed Chinese law wholesale. She is borrowing French and German law (that is to say, practically Roman law) wholesale to-day. It is hard to see what else she could have done; for she would never have been admitted into the so-called comity of civilised nations unless equipped with a legal system commanding those nations' approval, and those nations approve no legal system save such as they are accustomed to themselves. True, there was a party almost from the beginning which said: "Japan for the Japanese. Our laws must suit our people. They must not be mere handles for obtaining treaty revision. Wait to codify until the national courts, interpreting national needs, shall have evolved precedents of their own. French and German codes are alien things, mechanically superimposed on our Japanese ways of thought and modes of life, which are not in touch with foreign civilisations and the laws that have sprung from them." But this national party lost the day. Possibly, in time to come, modifications dictated by national needs may creep in. It is noticeable that (possibly as a result of the healthy reaction of the last ten years) the Civil Code, the most recently published of

all, does to a not inconsiderable extent take into account the existing fabric of Japanese society,—a fabric differing widely in many essential points from that of the West; for in Japan the family is the social unit, not, as with us, the individual.

The new codes resulting from the legislative activity of the present reign are. (1) the Criminal Code and the Code the Criminal Procedure, drafted by Monsieur Boissonnade de Fontarabie on the basis of the Code Napoleon, with modifications suggested by the old Japanese Criminal Law; these were published in 1880, and came into force in 1882; the Code of Criminal Procedure was, however, revised in 1890, in order that it might be uniform with the Code of Civil Procedure, according to the provisions of (2) the Law of the Organisation of Judicial Courts, promulgated in the month of February, 1890, and put into force on the 1st November of the same year; (3) the Code of Civil Procedure and the Commercial Code, published in 1890, and the Civil Code published in 1896; of these the Code of Civil Procedure went into effect at once, while the other two are still delayed and under revision, it having been found that the proposed changes in matters affecting the family relations and certain commercial usages were too radical. Though not actually entitled codes, we may also include: (4) the Constitution, with its attendant laws regarding the Imperial House, the Diet, and Finance; (5) the Laws for the Exercise of Local Self-Government; and (6) divers statutes on miscellaneous subjects. The draft of the revised Criminal Law was introduced into the Diet at its session of 1890—91.

Crimes, as classified in the Criminal Code, are of three kinds, namely: (1) crimes against the state or the Imperial Family, and in violation of the public credit, policy, peace, health, etc.; (2) crimes against person and property; (3) police offences. There is also a subdivision of (1) and (2) into major and minor crimes.

The punishments for major crimes are : (1) death by hanging ; (2) deportation with or without hard labour, for life or for a term of years ; (3) imprisonment with or without hard labour, for life or for a term of years. The punishments for minor crimes include confinement with or without hard labour, and fines. The punishments for police offences are detention for from one to ten days without hard labour, and fines varying from 5 *sen* to 1.95 *yen*. The Court which tries persons accused of major crimes consists of three judges, that for minor crimes of one judge or three according to the gravity of the charge, and that for police offences of one *juge de paix*.<sup>1</sup> Contrary to Western usage, an appeal is allowed in the case of major crimes for a trial of facts. Capital punishments are carried out in the presence of a procurator. They are now extremely rare. Criminals condemned to deportation are generally sent to the island of Yezo, where they sometimes work in the mines. The ordinary prisons are situated in various parts of the empire, and number one hundred and thirty-two.

A person who has suffered injury by crime lodges his complaint at a police-office or with the procurator of any court having jurisdiction over the crime in question. Policemen can arrest an offender whose crime was committed in their presence, or which the complainant avers to have actually seen committed. In all other cases they can arrest by warrant only. Bail is allowed at the discretion of the judge, but only after reference to the procurator who has taken up the case. Accused persons are often kept in prison for a considerable time before trial, and no lawyer is allowed to be present at the preliminary examination, which also is often long delayed. The law promulgated in February, 1890, relative to the organisation of judicial courts, embodied the usage developed since the establishment of the

---

\*The system being French, it seems advisable to retain the French terms in cases where there is no exact, or no generally current, English equivalent.

courts in 1872, but introduced at the same time certain changes borrowed rather from German than from French sources.

The history and nature of modern Japanese legal institutions is, very briefly, as follows. Down to 1872, the judicial department had united in itself the functions of chief law-court and chief executive office for the transaction of judicial business throughout the land, the same staff of officials serving for both purposes. In that year, however, a separation took place. Judges, procurators, a judicial police for the arrest of prisoners, *avoués*, *avocats*, and notaries were established, as also separate judicial courts and a law school. The pattern copied was French. Since that time numerous changes have taken place. At present the courts are divided into local courts (presided over by *juges de paix*), district or provincial courts, courts of appeal and a supreme court (*cour de cassation*), all of which have jurisdiction both in criminal and civil suits. Each of these courts has branch offices established to accommodate suitors, regard being had to population and to the area of jurisdiction. The local courts have jurisdiction over police offences and such minor crimes as the procurators may deem it proper to punish with a lighter kind of punishment adjudged by one of those courts; the district courts have jurisdiction over crimes, besides acting as courts of preliminary investigation; the appeal courts hear new trials; the supreme court hears criminal appeals on matters of law. Crimes of whatever sort, except police offences, are as a rule subjected to preliminary examination before actual trial. When, however, the charge is perfectly clear of doubt, the procurators ask for an immediate trial in the case of minor crimes. The conducting of criminal cases, from the very beginning down to the execution of the criminal, if he be condemned to suffer death, rests with the procurator, who unites in his own person the functions of public prosecutor and of grand jury.

The present judiciary consists partly of men trained under the old pre-European *régime*, but mostly of graduates of the Law

College of the Imperial University and of the private law colleges, of which there are six in Tōkyō and eight altogether in the empire. About a thousand young men graduate yearly. Lawyers are bound to pass a certain examination before being admitted to practise at the bar; but it is of a very theoretical nature, and is likely to be revised. The new law concerning the constitution of courts requires candidates for judgeships to pass two competitive examinations, unless they are graduates of the University, in which case they need only pass the second of the two, after having served as probationary judges for a term of three years. Judges are appointed for life. Their salaries vary from 700 to 4,000 *yen* (£70 to £400) per annum. The presidents of courts are, however, more highly remunerated. The president of the supreme court receives 5,500 *yen*, and is of *shūnin* rank.\* The chief procurator receives 5,000 *yen*, and is of *chokunin* rank.

The system of trial, as well in civil as in criminal cases, is inquisitorial. It was so in Old Japan, and is so in France, whence modern Japanese law comes. Formerly no convictions were made except on confession by the prisoner. Hence an abundant use of torture, now happily abolished, and a tendency, even in civil cases, to find against the defendant, although the *theory* is that the defendant must be presumed to be in the right until actually proved the contrary. In this characteristic, Japan does but conform to her Continental models, and indeed to the universal usage of mankind with the solitary exception of the English. The judge conducts the trial alone. All questions by counsel must be put through him. Counsel do not so much defend their clients as represent them. They even testify for their clients, strange as such a thing must sound to English ears. Another peculiarity—at least ac-

---

\* All officials are classified into four ranks, *shūnin*, *chokunin*, *sōnin*, and *hannin*. The *shūnin* are the highest of all, receiving their nomination from the Emperor himself.

according to English notions, though we believe that something similar exists in France—is that husband and wife, parent and child, master and servant, are prohibited from appearing as witnesses against each other. At the same time, they are not entirely excluded from the examination. The code of criminal procedure draws a fine distinction, excluding them as witnesses, but admitting them as “referees,”—we can think of no better equivalent for the difficult Japanese term *sankōnin* (参考人). A *sankōnin* is a witness and yet not an authoritative witness, a quasi-witness, if one might so phrase it, who is not called upon to be sworn. The idea is, of course, that persons thus related are likely to be prejudiced in each other's favour, and that their testimony should accordingly be allowed little weight in comparison with that of others more probably impartial. Witnesses are sworn, though not exactly in the European manner. The oath is rather a solemn asseveration, and is entirely unconnected with any religious sanction. It is in the form of a written document, to which the person sworn affixes his seal. The proceedings at a trial are all committed to writing, but not in the actual words used, as Japanese custom is averse to the employment of the colloquial for literary purposes. The gist of the questions and answers is therefore translated into the book style.

Needless to say that the above is the merest shadowy outline of a vast subject. Transformed, revolutionised as it has been, Japanese law nevertheless retains not a few curious features of its own, which would interest both the legal specialist and the student of history and sociology. In departments of legal activity the new codes regulating which are not yet put into force, the customary law of an earlier date is still followed, though variously modified by the application, more or less tentative, of European principles of jurisprudence. Land tenure and all such family matters as succession, marriage, adoption, etc., in which it is most difficult to effect sudden changes, belong to this category.

**Books recommended.** J. H. Gubbins' English translation of the Civil Code, with Japanese original on the same page.—The official versions in English of the Commercial Code, the Penal Code, and the Code of Civil Procedure, and in French of the Code of Criminal Procedure—Pamphlets in English by Dr. Lounholm on the Civil and Commercial Codes—For an account of the earlier or traditional law, may be recommended Professor J. H. Wigmore's voluminous treatise on *Private Law in Old Japan*, printed in Vol. XX. of the "Asiatic Transactions," and *Notes on Land Tenure and Local Institutions in Old Japan*, by Dr. D. B. Simmons and Mr. Wigmore, in Vol. XLX Part I. of the same. To these may be added Masujima's paper *On the Jitsuin or Japanese Legal Seal*, printed in Vol. XVII Part II. of the Asiatic Transactions, and Gubbins's *Report on Taxation in Japan, with a Supplementary Paper on Land Tenure*. Those who can read Japanese should refer to the *Saiban Suishu* (裁判粹誌), a periodical founded by Mr. R. Masujima, of the Japanese Bar and of the Middle Temple, London, in 1888, for the purpose of reporting important law cases. Ignorant as we are of law, the foregoing article must be considered as proceeding from our informant, Mr. Masujima. All that we have done has been to put into shape and abridge the information which he kindly supplied.

**Lighthouses.** The Imperial Japanese Lighthouse Bureau, which is among the best-organised branches of the public service, owed its inception to Sir Harry Parkes, one of whose earliest actions, on the restoration of the Mikado to absolute power in 1868, was to represent to the Japanese government the necessity of properly lighting the dangerous coast of this archipelago, if foreign trade was to be successfully carried on. Indeed, he had already approached the Shōgun's advisers on the same subject as far back as 1866, with the result that Mr. VERNY, a French engineer then occupied in building the dockyard at Yokosuka, was charged with the erection of four lighthouses in the neighbourhood of Yedo—one at Kwannon-zaki, one at Jōgashima, one at Nojima, and one between the Shinagawa forts. But it was not till 1868 that lighthouse work was taken in hand systematically by men specially trained for the purpose. In that year the Board of Trade, on Sir Harry Parkes's recommendation, sent out both the necessary apparatus and the necessary *personnel*, with Mr. R. H. Brunton as engineer-in-chief. By November, 1875, when Sir Harry was invited to make a tour of inspection along the coast, over thirty lighthouses were already in working order. From that time forward, there

has been constant advance, the Japanese coast being now one of the best lighted in the world.

Japan remained, so to say, at school in this matter for some twelve or thirteen years, after which time the English lighthouse-keepers and most of the other foreign employ  s were discharged. But though dispensing with the foreign staff about 1880, and though strongly urged in 1884 by patriotic petitioners to cut down all foreign influence root and branch, and to erect lighthouses with regard to the needs of native shipping exclusively, the government has wisely refused to subscribe to such a jingo policy. The instructions for lighthouse-keepers remain, as in the past, those of the Scottish Board of Northern Lights, modified in certain respects so as to suit the peculiarities of the Japanese service. The dioptric apparatus which is used in most of the Japanese lighthouses is still imported from France, though the clock-work and other machinery is manufactured in Japan. The total number of lighthouses at present in working order is one hundred and seven, of which nine are lighted beacons. These are all of the latest European pattern, and there are a number of other local lighthouses in old-fashioned Japanese style. Eight new lighthouses are in process of construction, while no less than three hundred and forty-two lighthouses and one hundred and ninety beacons and buoys are under consideration, at an estimated cost of over 14,380,000 *yen*.

In addition to lighthouses, the bureau has established lightships, buoys, and beacons. There is also a system of fog-signals, chiefly from Kinkwazan northward on the Main Island, and on the east coast of Yezo, those portions of the country being specially subject to fogs.

**Book recommended.** The *Annual Report* of the Department of Communications.

**Literature.** We hear of one or two Japanese books as having been composed in the seventh century of the Christian

era, shortly after the spread of a knowledge of the Chinese ideographs in Japan had rendered a written literature possible. The earliest work, however, that has come down to us is the *Kojiki*, or "Record of Ancient Matters," dating from the year 712. This work has sometimes been called the Bible of the Japanese, because it contains the mythology and earliest history of the nation: but it gives no moral or religious precepts. It was followed in A.D. 720 by the *Nihongi*, or "Chronicles of Japan," a more pretentious work written in Chinese, the Latin of that age and country. In about A.D. 760 came the *Manyōshū*, or "Collection of a Myriad Leaves." It is an anthology of the most ancient poems of the language, and is invaluable as a repertory of facts and allusions interesting to the philologist, the archæologist, and the historian. Its poetical merit is also rated very high by the orthodox native critics, who are unacquainted with any literature but their own, unless it be the Chinese. From that time forward the literary stream has never ceased. It has flowed in a double channel—that of books in the native language, and that of books written in Classical Chinese. Chinese has been generally preferred for grave subjects—law, for instance, and history; Japanese for poetry, romance, and other branches of *belles-lettres*. Sir Ernest Satow, following the native authorities, classes Japanese literature under sixteen heads, which are:

I. STANDARD HISTORIES. Besides the *Kojiki* and *Nihongi* already mentioned, the most important standard history is the *Dai Nihonshi*. This huge work in one hundred volumes was compiled at the end of the seventeenth century by a whole company of Japanese and Chinese men of learning, under the general superintendence of the second Prince of Mito, who was a munificent patron of literature.

II. MISCELLANEOUS HISTORICAL WORKS, that is, histories written by private persons and therefore devoid of official sanction. Such are the *Mitsu Kagami*, the *Gempei Seisuiiki*,

the *Heike Monogatari*, the *Taiheiki*, and a host of others, concluding with the *Nihon Gwaishi*, which, a few years ago, was in every educated person's hands, and which, by its fanatically Imperialist sentiments, contributed in no small measure to bring about the fall of the Shōgunate.—All Japanese histories are written in a style which repels the European reader. They are, for the most part, annals rather than histories properly so-called. Sir Ernest Satow's translation of the first five books of the *Nihon Gwaishi* should be glanced through by any one who doubts this assertion. He will find it almost impossible to bring himself to believe that a book so intolerably dry could ever have fired a whole nation with enthusiasm. That it did so is one of the curiosities of literature.

III. LAWS. The *Ryō no Gige* and the *Engi-shiki* are the works in this division which are most often quoted.

IV. BIOGRAPHY.

V. POETRY. (See Article on this subject.)

VI. CLASSICAL ROMANCES. This is the most curious department of standard Japanese literature, lifting, as it does, the curtain from the long-forgotten life of the Japanese Court of the tenth and eleventh centuries of our era. The lords and ladies of those days step out before us with all the frivolity, but also with all the elegance, of their narrow aristocratic existence, which was bounded by the horizon of the old capital, Kyōto. We have their poetastering, their amorous intrigues of course, their interminable moon-gazings and performances on the flute, even minute descriptions of their dresses and of the parties they gave—one among many witnesses to the fact that a large proportion of the authors were women. The earliest book commonly classed among the romances is more properly a fairy-tale; for it deals with the adventures of a maiden who was exiled from the moon to this our workaday world. It is entitled *Taketori Monogatari*, or the "Bamboo-

cutter's Romance," because the maiden was discovered in a section of bamboo, where she lay sparkling like gold. To mention but three or four more out of a hundred, there are the *Utsubo Monogatari* and the *Ise Monogatari*, both attributed to the tenth century, the *Konjaku Monogatari*, with its sequel the *Uji Jūi*, which are collections of shorter tales, and the *Genji Monogatari*, which dates from the year 1004, and is the most celebrated of all, chiefly on account of its ornate style.

VII. MISCELLANIES. These books are a sort of *olla podrida* of the thoughts of their authors, jotted down without any attempt at classification, but with a great deal of literary chiselling. The two miscellanies most to be recommended are the *Makura no Sōshi*, by a court lady named Sei Shōnagon who flourished in the eleventh century, and the *Tsurezure-Gusa* by a Buddhist monk who died in the year 1350.

VIII. DIARIES. Of these, the *Hōjōki* is probably the one which the student will find most interesting. Like the *Tsurezure-Gusa*, it is the work of a Buddhist monk. The author describes the calamities of his times, and expatiates on the superiority of life in a hermit's cell to that which he had previously led amidst worldly vanities. It dates from about the year 1200. The *Murasaki Shikibu Niki*,\* which is the diary of the most celebrated of Japanese authoresses, is remarkable as being probably the hardest book to construe in the Japanese language.

IX. TRAVELS. Under this heading, the bibliographers class many works which might more advantageously be counted among the DIARIES, as not only are they diaries in fact, but are so entitled by their authors. The easiest and most attractive of the Japanese classics is to be found in this division. It is entitled the *Tosa Niki*,\* that is, "Diary of [a Voyage Home from] Tosa." It dates from the year 935. Travels are the least voluminous department of Japanese literature. How should it

---

\* This word is commonly pronounced *Nikki*; but *Niki* is more ancient and correct.

accord with the fitness of things in this stay-at-home country to have a Sir John Maundeville or a Captain Cook?

X. DRAMAS. These are treated of in the Article on the THEATRE.

XI. DICTIONARIES AND WORKS ON PHILOLOGY. The best native dictionaries of classical Japanese are the *Wakun no Shiori* and the *Gagen Shūran*; but both are unfortunately fragmentary. The recently published *Genkui*, or "Sea of Words," aims at greater completeness. The fullest native grammar is the *Kotoba no Chikamuchi*, by Minamoto-no-Shigetane. The chief writers of the old school on general philological subjects are Mabuchi (died 1769), Motoori (died 1801), and Hirata (died 1843). In Motoori's works the classical Japanese language reached its acme of perfection. Specially remarkable are, among his greater undertakings, the standard commentary on the *Kojiki*, entitled *Kojiki Den*, and, among his lighter essays, the *Tama-Gatsuma* containing jottings on all sorts of subjects, philological and otherwise.

XII. TOPOGRAPHY. The more popular publications of this class, dating roughly from the middle of the present century, are really the best, though they are less esteemed by the Japanese literati than are other works bearing the stamp of greater antiquity. These popular topographical works are illustrated guide-books to the various provinces of the empire, and are known under the collective name of *Meisho Zue*. Though by various authors, they are all constructed on a uniform plan, somewhat resembling that of our county histories, though more discursive and better adapted to the practical needs of travellers.

XIII. LITERATURE OF THE SHINTŌ RELIGION. Chief works: the *Kojiki Den*, already mentioned under another heading—for indeed it is one of the corner-stones of Japanese literature—and Hirata's still only half-published *magnum opus*, entitled *Koshi Den*. This latter is remarkable for its extraordinary

elaborateness and for the vast erudition of its author. Unfortunately Hirata was very bigoted as well as very learned. Consequently the reader must be always on his guard, so as to distinguish how much really belongs to Shintō and how much to Hirata himself; for Hirata never scrupled to garble a sacred text, if he could thereby support his own views as to what the sacred writers *ought* to mean. Extremely interesting to the specialist are the ancient Shintō rituals termed *Norito*, round which a mass of modern commentary has gathered. A remarkable peculiarity of this section of Japanese literature is the attempt made by its authors to use pure Japanese only, without any admixture of the Chinese element.

XIV. BUDDHIST LITERATURE. This division comprises singularly few works of merit, Buddhism having found an uncongenial soil in the Japanese mind. We do not know of any Japanese Buddhist book that takes, either in literature or popularity, a place at all comparable to that taken among ourselves by the "Imitation of Christ," the English "Prayer-Book," or the "Pilgrim's Progress." Shintō, though immeasurably inferior to Buddhism as a religion, must be admitted to have carried off from its rival all the literary laurels on Japanese soil. Besides the Buddhists proper, there is a school of moralists calling themselves *Dōtokusha*, founded partly on Buddhism, partly on Confucianism, partly on utilitarian common-sense. Some of their *Dōwa*, or "Moral Discourses," have a certain interest. But the best things in this line are two small collections of moral aphorisms entitled *Jitsu-Go Kyō*, or "Teaching of the Words of Truth," and *Dōji Kyō*, or "Teaching for Children."

XV. MODERN FICTION. Japan's greatest modern novelist, in the opinion of the Japanese themselves, is Bakin (1767—1848), the most widely popular of whose two hundred and ninety works is the *Hakkenden*, or "Tale of Eight Dogs," itself consisting of no less than a hundred and six volumes. Though

Japanese volumes are smaller than ours, the *Hakkenden* is a gigantic production. Other universally popular novels of the earlier part of the nineteenth century are the *Ukiyo-buro*, by Samba, and the *Hiza-Kurige*, by an author who writes under the name of Jippensha Ikku. In our opinion this latter is, with some of the lyric dramas (*Nō no Uta*), the cleverest outcome of the Japanese pen. In it are related with a Rabelaisian coarseness, but also with a Rabelaisian verve and humour, the adventures of two men called Yajiro-bei and Kidahachi as they travel along the Tōkaidō from Yedo to Kyōto. The impecunious heroes walk most of the way, whence the title of *Hiza-Kurige*, which may be roughly rendered "Shanks's Mare." The author of this work occupies in literature a place akin to that which Hokusai occupies in art. Warmly appreciated by the common people, who have no preconceived theories to live up to, both Hokusai and Jippensha Ikku are admitted but grudgingly by the local dispensers of fame to a place in the national Walhalla. They must look abroad for the appreciation of critics taking a wider view of the proper functions of literature and art. Gravity, severe classicism, conformity to established rules and methods—such qualities still constitute the canon of orthodox Japanese literary judgment. Many Japanese novels are of the historical kind. The most interesting of these is the *I-ro-ha Bunko*, by one Tamenaga Shunsui, which, with its sequel, the *Yuki no Akebono*, gives the lives of each of the celebrated Forty-Seven Rōnins. The *Ōoka Meiyo Seidan* is another book of this class much to be recommended to the student for its interest and its easy style. It purports to be an authentic account of numbers of *causes célèbres* tried by Ōoka, the Japanese Solomon, who flourished early in the eighteenth century.

XVI. MISCELLANEOUS LITERATURE, including cyclopædias, works on industries, sciences, arts, and inventions, works on Confucianism, works on Japanese and Chinese antiquities,

and on a hundred other subjects. Under this heading, the popular moral treatises of Kaibara Ekiken and Arai Hakuseki, Confucianists of the seventeenth century, call for particular notice, partly because their ideas are those that long moulded Japanese society, partly because the easy, flowing style of these books specially fits them for the student's use

To the foregoing enumeration borrowed from Sir Ernest Satow, we venture to add one item more, namely :—

XVII. EUROPEANISED LITERATURE. The opening of the country was the death-blow to Japanese literature proper. True, thousands of books and pamphlets still pour annually from the press—more, probably, than at any previous time. But the greater number are either translations of European works, or else works conveying European ideas. From “Mrs. Caudle” up to Captain Mahan, nothing is a-missing. It is but natural and right that this should be so. Immense civilising effects in every department of scientific activity are being produced by the contemporary school of Europeanised authors, with Fukuzawa, Katō, Toyama, and a dozen other eminent men leading the van. But of course their translations, adaptations, and imitations can interest Western readers, who are in possession of the originals, far less than do the books written under the old order. Shakespeare in Japanese dress sends a cold shiver down one's back. Even Japanese novel-writers nowadays draw their inspiration from abroad. The first European novel to be translated was (of all books in the world) Bulwer Lytton's “Ernest Maltravers,” which appeared in 1879, under the title of *Kwaryū Shunwa*, literally, “A Spring Story of Flowers and Willows.” Paraphrase is frequently resorted to:—a plot is borrowed, and the proper names which occur in it are slightly Japonised, as *Shimizu* for Smith, *O Risa* for Eliza, and details altered so as to suit Japanese social conditions. Sometimes a more ambitious and original style of historical romance is attempted. We would willingly wager ten thousand to one that not a single reader of these

pages could ever guess the hero of the most popular Japanese work of fiction that has appeared during the present reign. It is—Epaminondas! The work in question, entitled *Keikoku Bidan*, takes the whole field of Theban politics for its subject-matter. That not a few of the allusions may be transferred without much difficulty to modern Japanese politics, is doubtless one reason for the immense sale it has had. The author, Yano Fumio, was able to take a trip to Europe and to build himself a fine house with the proceeds. Another successful novel, the *Kajin no Kiyū*, has its opening scene laid in the Capitol at Washington, where one of the characters—a Japanese—reads aloud to his companion the Declaration of Independence. The Carlists, the wicked English who robbed Egypt of her native prince Arabi Pasha, etc., etc., all appear in kaleidoscopic variety in the pages of this work, which, by a curious contradiction, is written in the most classical Chinese style. A sequel is in the press. Sometimes the future is peered into, after the example of Lytton and the author of “The Battle of Dorking.” In 1895, while Japan was busy beating China, and had convinced herself that she could beat the world, one of the Tōkyō papers achieved a success by the publication of a serial novel entitled *Asahi-Zakura*. The heroines of this book were two Red Cross nurses, and the story that of the coming defeat of England by Japan, who, after annexing Hongkong, India, Malta, and Gibraltar, sends her fleet up the Thames to raze the fortresses there and to exact from the cowering Britishers an enormous indemnity.

The favourite novelists of the present day are Kōyō Sanjin, Rohan, Sazanami, and Bimyōsai. The *Shosei Katagi*, a novel of student life in Tōkyō by Tsubouchi Yūzō, and Aeba Kōson’s humorous sketches collected under the title of *Muratake*, are also much read.

Among more serious and influential modern productions may be mentioned *The Opening of Japan*,<sup>1</sup> by Shimada Saburō; The

---

(1) *Kaikoku Shimatsu*.

Main Points of Japanese History,<sup>2</sup> by Saga Shōsaku; *The History of Two Thousand Five Hundred Years*,<sup>3</sup> by Takekoshi Yosaburō; *The History of the Tokugawa Shōguns*,<sup>4</sup> by Naitō Ohisō; *The Decline and Fall of Feudalism*,<sup>5</sup> by Fukuchi Gen-ichirō; *The Japan of the Future*,<sup>6</sup> by Tokutomi Iichirō, and the same author's *Life and Opinions of Yoshida Shōin*;<sup>7</sup> *A Treatise on the Constitution*,<sup>8</sup> by Ono Azusa, the Constitution itself with Count Itō's Commentary (see p. 194); Nakamura's excellent translation of Smiles' *Self-Help*,<sup>9</sup> together with such more recent scholastic works as Mikami and Takatsu's *History of Japanese Literature*,<sup>10</sup> Ōtsuki's dictionary entitled *The Sea of Words*,<sup>11</sup> Takahashi Gorō's excellent Japanese English dictionary,<sup>12</sup> and Taguchi's encyclopædia entitled *A Dictionary of Japanese Society*.<sup>13</sup> But the work which undoubtedly did more than any other single factor to mould Japan into its present shape was *The Condition of Western Countries*<sup>14</sup> by the veteran Fukuzawa—a book now more than a quarter of a century old. The reception of the same author's "Hundred Essays,"<sup>15</sup> published in 1897, shows his popularity to be as fresh as ever. Great expectations are raised by the first volume of a *History of Japanese Buddhism*,<sup>16</sup> by Murakami Sensei, and by a promised history of the Choshū clan by Suematsu Kenchō.

And now it may be asked: What is the value of this Japanese literature—so ancient, so voluminous, locked up in so recondite a written character? We repeat what we have already said of the "Collection of a Myriad Leaves"—that it is invaluable to the philologist, the archæologist, the historian, the student of curious manners doomed to disappear. We may add that there are some clever and many pretty things in it. The

*Tosa Niki*, for instance, is charming—charming in its simplicity, its good taste, its love of scenery and of children. The *Mahura no Sōshū* has numerous touches of wit and delicate satire. Some of the lyric dramas are remarkable poems in their way. Some of the liliputian odes in the “Songs Ancient and Modern” sparkle like tiny dew-drops in the sun. For Jippensha Ikku, the Rabelais of Japan, we have already expressed our warm admiration. On the other hand, much of that which the Japanese themselves prize most highly in their literature seems intolerably flat and insipid to the European taste. The romances—most of them—are every bit as dull as the histories, though in another way. The histories are too curt, the romances too long-winded. If the authoress of the *Genji Monogatari*, though lauded to the skies by her compatriots, has been branded by Georges Bousquet as *cette ennuyeuse Scudéry japonaise*, she surely richly deserves it. And what shall we say of Bakin, on whom her mantle fell in modern times—Bakin and his *Hak-kenden*, which every Japanese has read and re-read till he knows it almost by heart? “How inimitable!” cries the enraptured Japanese reader, “how truly excellent!” “Excellent, yes!” the European retorts, “excellent to send one to sleep, with its interminable accounts of the impossible adventures of eight knights, who personify the eight cardinal virtues through the labyrinth of a hundred and six volumes!”

Sum total: what Japanese literature most lacks is genius. It lacks thought, logical grasp, depth, breadth, and many-sidedness. It is too timorous, too narrow to compass great things. Perhaps the Court atmosphere and predominantly feminine influence in which it was nursed for the first few centuries of its existence stifled it, or else the fault may have lain with the Chinese formalism in which it grew up. But we suspect that there was some original sin of weakness as well. Otherwise the clash of India and China with old mythological Japan, of Buddhism with Shintō, of imperialism with feudalism,

and of all with Catholicism in the sixteenth century and with Dutch ideas a little later, would have produced more important results. If Japan has given us no music, so also has she given us no immortal verse, neither do her authors atone for lack of substance by any special beauties of form. But Japanese literature has occasional graces, and is full of incidental scientific interest. The intrepid searcher for facts and "curios" will, therefore, be rewarded if he has the courage to devote to it the study of many years. A certain writer has said that "it should be left to a few missionaries to plod their way through the wilderness of the Chinese language to the deserts of Chinese literature." Such a sweeping condemnation is unjust in the case of Chinese. It would be unjust in that of Japanese also, even with all deductions made.

**Books recommended.** An elaborate article on *Japanese Literature*, by Sir Ernest Satow, in Vol. IX. of Ripley and Dana's *American Cyclopædia*.—*On the Various Styles used in Japanese Literature*, by B. H. Chamberlain, printed in Vol. XIII. Part I. of the *Asiatic Transactions*.—*Die Japanische Ethische Litteratur der Gegenwart*, by Dr. L. Busse, in Part 50 of the "German Asiatic Transactions."—The following translations or summaries of Japanese works are easily accessible:—*An Ancient Japanese Classic* (the *Tosa Nih*), by W. G. Aston, in Vol. III. Part II; *A Literary Lady of Old Japan*, by the same, in Vol. XVI. Part III; a literal translation of the *Nihongi*, by the same, published by the Japan Society; *Ancient Japanese Rituals*, by Satow, in Vols. VII. and IX. of the *Asiatic Transactions*; the *Gobunsho* (a Buddhist book), by James Troup, in Vol. XVII. Part I; The *Kojiki*, by B. H. Chamberlain, in the Supplement to Vol. X., and other translations by the same in other volumes of the "Asiatic Transactions."—An English paraphrase of the *Genji Monogatari*, by Suematsu Kenchō.—There are also some interesting translations by Eby and others in a now extinct magazine, the *Chrysanthemum*. See also in Dutch, German, French, and Italian, the works of Hoffmann, Pfizmaier, de Rosny, Puni, Turretini, Severini, Lange, and Florenz, and the Articles on MORAL MAXIMS, POETRY, and WOMAN in the present work.—Mr. Aston is engaged on a *History of Japanese Literature*, which will no doubt include all that is best on the subject.

**Little Spring.** *Ko-haru*, or "the Little Spring," is the Japanese name for the Indian Summer—those beauteous weeks in November and December, when the burden and heat of the year are over, when the sky is constantly blue and the atmosphere golden, and the maple-trees (to borrow a favourite expression of the Japanese poets) put on their damask robes.

**Lotus.** The so-called lotus of this country is really a species of water-lily, the *Nelumbium*, which inhabits shallow ponds, wherefore the Japanese Buddhists compare a virtuous man dwelling in this wicked world to a lotus-flower growing out of the mud. Sir Monier Williams says that "Its constant use as an emblem seems to result from the wheel-like form of the flower,—the petals taking the place of spokes, and thus typifying the doctrine of perpetual cycles of existence." In any case, the connection between the lotus and Buddhism is very close. Buddha is figured standing on a lotus, gold and silver paper lotuses are carried at funerals, tombstones are often set on an inverted lotus-flower of stone as their base, lotus-beds often surround shrines built on islets. Owing to this association with the idea of death the lotus is a flower apart, not sharing in the popularity of the cherry-blossom, the iris, and the chrysanthemum. But this sentimental objection does not exclude its pips and roots from being used as a common article of diet.

Stately and yet tender is the beauty of the lotus-blossom early on a summer's morning—for its petals close before the overpowering heat of the August noonday—while the great bluish-green leaves, studded with water-drops, continue to reflect the sky.

**Luchu.** Luchu—pronounced *Dŭchū* by the natives and *Ryūkyū* by the Japanese—is, in its widest acceptance, the general name of several groups of islands stretching nearly the whole way between the southernmost outlying islets of the Japanese archipelago and the north-eastern extremity of Formosa. But it is usually restricted in practice to the central group, the chief members of which are Amami-Ōshima and Okinawa. This group is of coral formation, and lies between 127° and 130° longitude east of Greenwich, and between 26° and 28° 30' of north latitude. To this position it owes a mild climate, marred only by the extreme violence of occasional typhoons during the summer months. The soil is so fertile as to produce two crops of rice yearly.

In race and language the Luchuans are closely allied to the Japanese, but for many centuries the two peoples seem not to have communicated with each other. The veil lifts in A. D. 1187 with the accession of King Shunten, said to have been a son of Tametomo, the famous Japanese archer. It is recorded that the Luchuans first sent an ambassador with presents to the Shōgun of Japan in the year 1451, that they discontinued such presents or tribute at the beginning of the seventeenth century, and were chastised for this neglect by the then Prince of Satsuma. Luchu continued to be a sub-fief of Satsuma, but with a ruler bearing the title of king, until the time of the Japanese revolution of 1868. Meanwhile the Luchuans, who had obtained their civilisation from China, also paid tribute to the Chinese Court, and received investiture for their kinglets from Peking. The little kingdom thus faced two ways, so that trouble was bound to ensue. An embassy was sent to Tōkyō in 1878, to endeavour to arrange matters in such wise that the double protectorate might be maintained,—China being, as the envoys said, honoured by the Luchuans as their father, and Japan as their mother. But the Japanese Government refused to admit this claim. The Luchuan king was brought captive to Tōkyō in 1879, and the archipelago was organised into a Japanese prefecture under the title of Okinawa-Ken. This change, though intensely disagreeable to the little insular Court and aristocracy, who forfeited most of their privileges, is believed to have been beneficial to the people at large.

The Luchuans—even the men—are distinguished in appearance by a top-knot of hair, through which they pass a large pin or skewer of gold, silver, or copper, according to their rank. Formerly corpses, instead of being interred at once, were left to decay either in a provisional grave or in a stream of water, and it was only after three years that the last funeral rites were performed. This custom has happily fallen into disuse. The capital of Luchu is Shuri, whose port is Nafa, called by the

Japanese Okinawa. The chief products are rice and sugar, the latter of which is the main staple of commerce. The area of the islands has been roughly estimated at 1,000 square miles, and the population at 170,000. The Luchus may easily be reached from Kōbe via the Inland Sea and Kagoshima. The steamer first visits the island of Amami-Ōshima, and then proceeds to Nafa, where it stops three days. The round trip from Kōbe and back takes seventeen days.

**Books recommended** *The Luchu Islands and their Inhabitants*, by B H Chamberlain, published in "The Geographical Journal" for April, 1895; *Essay in Aid of a Grammar and Dictionary of the Luchuan Language*, by the same, printed as Supplement to Vol XXIII of the "Asiatic Transactions"

**Luck (Gods of).** The Seven Gods of Luck (*Shichi Fuku-Jin*) are: Fukurokuju, distinguished by a preternaturally long head, and typifying longevity and wisdom; Daikoku, whose rice-bales show him to be the god of wealth; Ebisu, bearing a fish, and serving as the patron of honest work; Hotei, with an enormous naked abdomen, a bag on his back and a fan in his hand, and signifying contentment and good nature; Bishamon, the impersonation of war, clad in armour, and bearing a spear and a toy pagoda; Benten, the goddess of love, distinguished by being the only female in the assemblage; and Jurōjin, a sort of repetition of Fukurokuju, both being often accompanied by a stag and a crane.

The Seven Gods of Luck have been swept together from many incongruous sources—Japanese Shintoism, Chinese Taoism, Indian Buddhism and Brahmanism. Their union in one group is the result of nothing more recondite than popular ignorance and confusion of ideas, and can be traced no further back than the time of Ieyasu (about A. D. 1600). The reader will find in Anderson's *Catalogue of Japanese and Chinese Paintings in the British Museum*, pages 27—46, a full discussion of the origin and attributes of these divinities, and will be surprised to dis-

cover how slender is the basis on which their modern popularity has been reared.

**Maps.** Much the best maps of Japan are those now in course of publication by the Geological Office of the Imperial Department of Agriculture and Commerce. There are three series,—geological proper, agronomical, and topographical, these last being specially recommended for all ordinary purposes, and obtainable of Messrs. Kelly and Walsh at Yokohama. The Yokohama section is particularly useful, including, as it does, many of the localities most frequently visited by pleasure-seekers, such as Kamakura, Enoshima, Miyanoshita, etc. There are two editions of this valuable set of maps,—one on the scale of 1 in 200,000, the other 1 in 400,000. Great pity is it that neither set has yet been pushed to completion. Hassenstein's German atlas of eight sectional maps, all completed, is also excellent. Sections III. and IV. which take in Central Japan, from the Inland Sea on the west to beyond Tōkyō and Nikkō on the east and north, are the most generally useful. Here again there is cause for regret, in that the author should have considered the usual method of spelling Japanese not good enough for him, and should accordingly have evolved a new one from the depths of his own inner consciousness. Are not Japanese names hard enough already? What traveller—what resident even—can be expected to recognise, say, the town of Chōshi under the disguise of “Tōshi,” or Hachijō under “Fatsidjiō?”

The *Fuji-mi Jū-san Shū*, or “Thirteen Provinces round Fujiyama,” is the best of the old-fashioned Japanese maps. The distances are given in figures, and the roads are clearly indicated. The father of Japanese cartography was Inō Chūkei (born A.D. 1744), of whose life and labours Dr. Knott has given a short account in Vol. XVI. Part II. of the *Asiatic Transactions*. The only reward he earned from his contemporaries was to be cast into a dungeon.

**Marriage.** In everything relating to marriage, the difference between East and West is still very strongly marked. Marriage among the Japanese is less of a personal and more of a family affair than it is in Western lands. Religion has no say in the matter, and the law regards it from a different point of view. An Englishman chooses his wife himself; but the English law, though perfectly neutral during this initial stage of the proceedings, steps in as soon as the knot is tied, and imperiously forbids its severance except in case of gross misconduct by one of the parties. Japanese marriages, on the contrary, are arranged by the two families, and the step is less solemn and not irrevocable, Japanese law remaining as neutral at the end as at the beginning. For though marriage is a legal contract while it lasts, it may, like other contracts, be terminated by the joint request and consent of the contracting parties. Divorce, too, at the request of one party—generally the man—is easy to obtain.

The way things are managed is this. When their child—whether boy or girl—has reached a marriageable age, the duty of the parents is to secure a suitable partner. Custom, however, rules that the conduct of the affair must be entrusted to a middleman (*nakōdo*)—some discreet married friend, who not only negotiates the marriage, but remains through life a sort of godfather to the young couple, a referee to whom disputes and even arrangements for divorce may be submitted for arbitration. Having fixed on an eligible *parti*, the middleman arranges for what is termed the *mi-ai*, literally, the “mutual seeing”—a meeting at which the lovers (if persons unknown to each other may be so styled) are allowed to see, sometimes even to speak to each other, and thus estimate each other’s merits. In strict etiquette, the interview should take place either at the middleman’s own residence, or at some other private house designated by the parents on both sides. But among the middle and lower classes, a picnic, a party to the theatre, or a visit to a temple often

serves the purpose. If the man objects to the girl or the girl to the man after the "mutual seeing," there is an end of the matter, in theory at least. But in practice the young people are in their parents' hands, to do as their parents may ordain. The girl, in particular, is a nobody in the matter. It is not for girls to have opinions.

If both parties are satisfied with what they have seen of each other, gifts consisting of clothes, or of money to purchase clothes, and of certain kinds of fish and edible seaweed, are exchanged between them. This exchange of presents is called *yuinō*. It corresponds to betrothal, and is binding—if not in actual law, at any rate in custom. The presents once exchanged, neither party can draw back. A lucky day is then chosen for the wedding. When it comes, the bride, dressed all in white, the colour of mourning—to signify that she dies to her own family, and that she will never leave her husband's house but as a corpse—is borne away at nightfall to her new home, escorted by the middleman and his wife. The parental house is swept out on her departure, and in former days a bonfire was lighted at the gate—ceremonies indicative of the purification necessary after the removal of a dead body.

The wedding, which takes place immediately after the bride's arrival at the house of her husband's parents, is of the nature of a dinner-party. The distinguishing feature of it is what is termed the *san-san ku-do*, that is, literally, "three three, nine times," because both the bridegroom and the bride drink three times out of each of three wine-cups of different sizes, making nine times in all—or rather they do not drink, but only lift the cup to their lips. Another essential part of the ceremony is the changing of garments. The bride, on reaching her new home, changes her white dress for one given to her by her husband. But immediately after the ceremonial drinking-bout, and while the guests are still assembled at the feast, she retires and puts on a coloured dress brought with her from her parents'

house. The bridegroom changes his dress at the same time in another apartment.\* At the conclusion of the feast, the newly married couple are led into the bridal chamber by the middleman and his wife, whereupon they pledge each other in nine more cups of wine. It is significant that the husband, as lord and master, now drinks first. At the earlier stage of the proceedings the bride drank first, in her quality of guest. This ends the wedding ceremony.

A few days later—strictly speaking it should be on the third day—a visit is paid by the couple to the bride's parents. This is termed her *sato-gaei*, or "return home." On this occasion, she wears a dress presented to her by her husband's family. Meantime the necessary notice has been given to the authorities, which is the only legal form to be observed. It consists in a request to the district office by the head of the family to which the girl formerly belonged, that her registration may be transferred to the office within whose jurisdiction her husband, or the head of her husband's family, if the husband himself be not a householder, has his domicile. An official intimation of the transfer follows this request, and all is then in order. When the new Civil Code comes into force, some further technical formalities will be necessary,—formalities, however, that will not essentially affect the nature of the institution; for even the Japanese are conservative in their chief social customs.

The above is the usual form of marriage. In some cases, however, the bridegroom is adopted into the bride's family, instead of the bride into the bridegroom's. This takes place mostly when a parent has only a daughter, or daughters, but no son. In order to preserve the family intact—due regard being had to the circumstance that no female can be its legal head—it is then necessary to adopt a son-in-law, who, literally

---

\* Some men are now married in European evening dress, in which case no change takes place.

becoming a son in the eyes of the law, drops his own surname and takes that of his wife. None but poor men are generally willing to place themselves in such a false position.

Amongst the lower classes, ceremonies and considerations of all kinds are often honoured only in the breach, many of the so-called marriages of plebeians being mere concubinage founded on mutual convenience. This accounts for the "boy" and the cook—to their foreign master's increasing astonishment—being found to bring home a new wife almost as often as they bring home a new sancepan. Such laxity would never be tolerated in well-bred circles.

When it is added that a Japanese bride has no bridesmaids, that the young couple go off on no honeymoon, that a Japanese wife is not only supposed to obey her husband, but actually does so, that the husband, if well enough off, probably has a concubine besides and makes no secret of it, and that the mother-in-law, with us a terror to the man, is not only a terror but a daily and hourly cross to the girl—for in nine cases out of ten, the girl has to live with her husband's family and be at the beck and call of his relations—when due consideration is given to all these circumstances, it will be seen that marriage in Japan is a vastly different thing, socially as well as legally, from marriage in England or the United States. The reader will be still more firmly persuaded of this truth, if he will take the trouble to glance at the Articles on DIVORCE and on WOMAN. He will see that in this part of the world it is a case, not of *place aux dames*, but *place aux messieurs*.<sup>1</sup>

---

\* May the writer be permitted here to record a little experience of his own? In his "Introduction to the *Kojiki*," he had drawn attention to the inferior place held by women in ancient as in modern Japan. Some years afterwards, six of the chief literati of the old school did him the honour to translate this "Introduction" into Japanese, with a running commentary. They patted him on the back for many things; but when they reached the observation anent the subjection of women, their wrath exploded. "The subordination of women to men," so runs this commentary, "is an extremely correct custom. To think the contrary is to harbour European prejudice. .... For the man to take precedence over the

The men, having everything their own way, naturally marry young. Speaking broadly, there are no bachelors in Japan. For an exactly contrary reason, there are no old maids. The girls are married off without being consulted, and they accept their fate as a matter of course, because their mothers and grandmothers, ever since the beginning of the world, accepted a like fate before them. One love marriage we have heard of,—one in five-and-twenty years! But then both the young people had been brought up in America. Accordingly they took the reins into their own hands, to the great scandal of all their friends and relations.

It would be interesting, were it possible, to ascertain statistically the effect on morality of early marriage as practised in this part of the world. Our impression is that the good results anticipated from such a system by certain European reformers do not show themselves here in fact. Not that wider intercourse with the people bears out the casual observer's harsh judgment on the standard of Japanese female morality. Japanese ladies are every whit as chaste as their Western sisters. But so far as we have been able to observe, the only effect of early marriage on the men is to change the date of their wild-oats sowing, making it come after wedlock instead of before.

The student of anthropology may like to know that neither ancient nor modern Japanese custom shows any trace of exogamy,—a fact the more remarkable when one reflects on the immense influence exerted on Japan by China, where it has been forbidden from time immemorial for a man to marry a girl bearing the same surname as his own.

**Books recommended** *Japanese Girls and Women*, by Miss Bacon.—*The Japanese Bride*, by N. Tamura. The publication of this latter little book, in 1893, raised such a storm of indignation among the author's countrymen that he was forced to resign his position of pastor of one of the native Christian churches.

---

woman, is the grand law of heaven and earth. To ignore this, and to talk of the contrary as barbarous, is absurd."—It does not fall to every one's lot to be anathematised by half-a-dozen Japanese literary popes—and that, too, merely for taking the part of the ladies!

**Maru.** It is often asked: What does the word *Maru* mean in the names of ships—as *Tōkyō Maru*, *Sugami Maru*, *Hiiyū Maru*, etc.? The answer is that the origin of the term is obscure. *Maru* means “round,” but how came ships by so inappropriate a name?

The first thing to note is that in former times ships had not the monopoly of the name. Swords, musical instruments of various kinds, pieces of armour, dogs, hawks, and the concentric sections of castles, were called *maru* also. The probability is that two distinct words—*maru* and *maro*—have flowed into one and so got confused. To name the concentric sections of a castle *maru*, “round,” was but natural. The word *maro*, on the other hand, is an archaic term of endearment. Hence its use in such ancient proper names as *Tamura-Marō*, a great general who subdued the Ainos; *Abe no-Nakamarō*, an eminent Chinese scholar of the eighth century; *Okinu-Marō*, a favourite dog of the Mikado Ichijō, and so on. The warrior’s pet sword, the sportsman’s favourite dog or hawk, the oarsman’s boat, would naturally come to be distinguished by the same half-personal name, much as the English sailor or engineer calls his ship or locomotive “she.” When the ancient word *maro* ceased to be understood, it would easily slide into the more familiar *maru*, by the alteration of the final vowel, *o* and *u* being particularly apt to interchange in Japanese.

Observe that *maru* is used of merchant vessels only. Men-of-war take *Kan* instead, as *Maya Kan*, *Asama Kan*. *Kan* was originally a Chinese word meaning “war-vessel.” It is now pronounced *lan* in China itself, and is no longer there used in the same sense.

**Massage.** Massage is the technical name, in use among doctors, for that process of rubbing the skin and kneading the muscles which in common language is called shampooing. Massage has for centuries played a great role in Japanese medicine—it, acupuncture, and the moxa being universally

credited with more than all the many virtues which Beecham, among ourselves, claims for his pills, and "Mother Seigel" for her syrup. The shampooers, popularly known as *amma-san*, also occupy a conspicuous place in Japanese social life. Immemorial custom limits the profession to the blind, who thus support their families, instead of, as is mostly the case in Western countries, being a burden to them. Such sums are they enabled to accumulate that they often turn money-lenders as well, and are correspondingly hated.

Till about the year 1870, all the shampooers in Japan formed one immense guild under two provosts, one of whom lived at Yedo, the other at Kyōto. This guild possessed various legal privileges, and admittance to it took place on the passing of certain tests and the payment of fees. It was divided into several grades, the rise from grade to grade being conditioned by new tests and higher fees. For the highest grade to which any ordinary blind mortal could aspire—the grade next under that of provost—a fee of \$1,000 was exacted. This organisation is now fast falling into decay; but the melancholy whistle of the blind shampooer, as he slowly feels his way along the streets at night, staff in hand, is still one of the characteristic sounds of every Japanese town.

Massage is much to be recommended to tired pedestrians and to persons suffering from lumbago, rheumatism, and other pains and aches. The Japanese shampooers, however, make the mistake of shampooing down instead of shampooing up. A portion of the good done is thus neutralised, one object of scientific massage being to help back towards the centre the blood which is lingering in the superficial veins.

**Metal-Work.** Bronze was introduced into Japan from China via Korea, and the Japanese still call it "the Chinese

metal" (*Kara-kane*). But it is the metal in which Japanese art over a thousand years ago was already winning its brightest laurels. The chief forms are the mirror, the temple bell, the gong, the vase (originally intended for the adornment of Buddhist altars), the lantern, and the colossal representation of divine personages. The grandest example of such colossal bronze-casting is the *Daibutsu* (literally, "great Buddha") at Kamakura, which dates from the thirteenth century. He who has time should visit the *Daibutsu* repeatedly; for, like Niagara, like St. Peter's, and several other of the greatest works of nature and of art, it fails to produce its full effect on a first or even on a second visit; but the impression it produces grows on the beholder each time that he gazes afresh at the calm, intellectual, passionless face, which seems to concentrate in itself the whole philosophy of the Buddhist religion—the triumph of mind over sense, of eternity over fleeting time, of the enduring majesty of Nirvāna over the trivial prattle, the transitory agitations of mundane existence.

Armour is another use to which metal (iron and steel) was put from the very earliest ages. The best examples of iron and steel armour date from the thirteenth and fourteenth centuries. The best swords date from the same time. The ornamental sword-hilts, guards, etc., date only from the sixteenth century onwards. The eighteenth and nineteenth centuries have been the most fruitful epoch for the production of small bronze objects, whose chief *raison d'être* is ornament, such as clasps, paper-weights, small figures of animals, mouth-pieces for pipes, and vases intended for dwelling-rooms—not for Buddhist altars, as in earlier days. Damascening or inlaying on metal has been carried to great perfection, notably of late years, when designs in various metals and alloys on a basis of bronze or iron have been made to reproduce whole landscapes with the minuteness of a painting. Contemporary artists in silver are obtaining delightful results. Hitherto the gold and silver work of the Japanese had

been less remarkable than their bronzes. In enamel—especially in what is known as *cloisonné* enamel—they are beyond all praise. (See also articles on ARMOUR, CLOISONNÉ, MIRRORS, and SWORDS.)

**Mikado.** Though this is the name by which the whole outer world knows the sovereign of Japan, it is not that now used in Japan itself, except in poetry and on great occasions. The Japanese have got into the habit of calling their sovereign by such alien Chinese titles as *Tenshi*, "the Son of Heaven;" *Ten-ō*, or *Tennō*, "the Heavenly Emperor;" *Shujō*, "the Supreme Master." His designation in the official translations of modern public documents into English is "Emperor." But we do not anticipate that this is likely to supersede, in literary and colloquial European usage, the traditional title of "Mikado," which is at once ancient, sonorous, and distinctively Japanese.

The etymology of the word *Mikado* is not quite clear. Some—and theirs is the current opinion—trace it to *mi*, "august," and *kado*, a "gate," reminding one of the "Sublime Porte" of Turkey. Sir Ernest Satow prefers to derive it from *mika*, an archaic word for "great," and *to*, "a place." In either case the word is one indicative of the highest respect, as it is but natural that the name used by the Japanese of old to designate their heaven-descended sovereign should be. The word *Mikado* is often employed to denote the monarch's Court as well as the monarch himself, such double usage being one of the peculiar features of Japanese grammar.

The antiquity of the Imperial family of Japan is unparalleled. The Japanese themselves claim that after endless ages passed in higher spheres, it began its earthly career with the

first human monarch, Jimmu Tennō, in the year 660 before Christ. From this, historical criticism bids us subtract more than a millennium, as Japanese history does not become a record of solid facts till the fifth or sixth century *after* Christ. It should also be pointed out that the succession has by no means followed those strict rules which Europe considers necessary for legitimacy. Many Mikados, even down to quite recent times, have been the sons of concubines. Others have been merely adopted from some related branch. Still, all deductions made, the family as such stands forth proudly as the oldest reigning family in the world. We know positively that it has reigned ever since the dawn of history in this archipelago, and that even then it was considered of immemorial age. The fact is peculiarly striking if we reflect upon the usually brief life of Oriental dynasties. Little wonder, therefore, all things considered, if a religious reverence for the Imperial line is as axiomatic in Japan, as completely removed beyond all doubt or controversy, as is the doctrine of the equal rights and duties of all men in the democratic societies of the West.

The present Mikado was born on the 3rd November, 1852, and succeeded to the throne in 1867. His name is Mutsuhito; but this name is scarcely ever mentioned, and is probably not even known to the great majority of the nation. In Japan the Emperor is simply the Emperor,—not a personality, an almost familiar individuality, as Queen Victoria and Kaiser Wilhelm, for instance, are to us. Such a question as “Is the Mikado popular?” which we have sometimes been asked in England, shows the questioner to be ten thousand miles from an appreciation of the attitude of men’s minds in Japan, or indeed in any Far-Eastern land—an attitude entirely reverential and distant, as to a god. Future generations of Japanese will probably know the present monarch as *Meiji Tennō*, the word *Tennō*, as already explained, signifying “Heavenly Emperor,” and *Meiji* being the chronological designation of the years comprised in

his reign. The reign itself will doubtless stand out in Japanese history as prominently as those which witnessed Japan's first great revolution,—her conversion to Buddhism and Chinese civilisation.

**Mineral Springs.** Japan, the land of volcanoes and earthquakes, is naturally rich in mineral springs; and the Japanese, with their passion for bathing, make the fullest use of them. The most noted of the many hundreds of Japanese spas are:—for sulphur baths, Kusatsu, Ashinoyu, Yumoto near Nikkō, Yumoto near Hakone, and Unzen near Nagasaki; for iron baths, Ikao and Arima; for salt baths, Atami and Isobe. Miyanoshita, one of those best-known to foreigners, has only traces of salt and soda. Its waters may therefore be used without medical advice, simply for pleasure's sake. There are powerful iron and sulphur springs at Ōjigoku (lit. "big hell"), some four miles beyond Miyanoshita. The crater of Shirane-san in the province of Kōtsuke has a pool so rich in hydrochloric acid ( $2\frac{1}{2}$  per cent according to Dr Divers, F.R.S.), that it may be administered as an excellent lemonade in the treatment of stomach and other affections. But speaking generally, sulphur, iron sulphate, and salt are everywhere the chief minerals found in the Japanese springs. Except the Hirano water used for Seltzer, very few contain carbonic acid gas. Few are cold; few are efficacious, like Vichy and Karlsbad, in diseases of the stomach and liver. On the other hand, the Kusatsu waters probably stand alone in the world by reason of their double character, consisting, as they do, of cold corrosively acid water and nearly boiling sulphur water. The cures which, by virtue of their temperature and their mineral acids, sulphur, and arsenic, they are capable of working, when mixed, upon syphilitic persons and on those afflicted with the severer forms of rheumatism are little short of miraculous. The Japanese have a proverb to the effect that love is the only grave distemper against which Kusatsu can effect nothing.

In many cases a spring is famous in its own neighbourhood only. But it then almost invariably gains in one way what it loses in another. The good country folk for twenty miles around consider it a panacea for all the ills to which flesh is heir. It is impossible to picture to oneself anything more grotesquely dissimilar to an Ems or a Homburg than one of these tiny spas, perched—say—amidst the mountains of Shinshū or Etchū, and visited only by Japanese of the most old-fashioned type and limited means—where, instead of a *table d'hôte*, each guest is served in his own poor room with a bowl of rice or maybe millet, a fid of salted egg-plant, and perhaps, on high days and holidays, a small broiled fish. Even this is luxury compared with the state of things existing in some remote districts, where the peasant invalids come, bringing their own rice and bedding with them on pack-horses, and pay only five cents a day for lodging, for the use of the mineral spring, and a titbit or two at each meal to help the rice down.

In opposition to all European sanitary ideas, the mineral springs of Japan are used at very high temperatures. Invalids enter baths of from 110° to 115° Fahrenheit, and their healthy friends go in with them for the sake of killing time agreeably. At Kusatsu the temperature of the baths is higher still. It ranges from 120° to 130° Fahrenheit; and as the first effect of the waters is to bring out sores all over the body, even if there were none before, the sufferings of those condemned to “make a cure” may be imagined. So excruciating is the agony that experience has dictated a peculiar device for meeting it: the bathers are subjected to military discipline. The squad of unfortunates approaches the bath to the sound of the trumpet, they wet their scalp and forehead at another trumpet blast, in order to prevent a rush of blood to the head, and so on throughout the performance, notice being given to them of the passing of the minutes while they sit boiling, with a view to keeping up their courage by the know-

ledge that the ordeal will soon be over. The whole life at Kusatsu is so strange that he whose stomach is not easily upset by nasty sights would do well to go and inspect it. To squeamish persons we say most emphatically, "Stay away!"

**Mirrors.** Japanese mirrors are circular, and are made of metal—generally of bronze coated on the front with an amalgam of tin and quicksilver beautifully polished. The back is adorned in relief with flowers, birds, or Chinese characters, and there is a handle on one side, the general appearance being that of a sort of handsome metal fan.

An extraordinary peculiarity characterises some of these Japanese mirrors: sunlight reflected from their *face* displays a luminous image of the design on their *back*! So strange a phenomenon has naturally attracted the attention of men of science. After much speculation, it has been clearly proved by Professors Ayrton and Perry to arise from the fact that the curvature of the face of the mirror over the plain part of the back is greater than over the design. The mirror is cast flat, and then rendered convex before being polished, by being so strongly scratched with an iron tool as to cause a buckling of the metal into a convex form, this convexity being afterwards increased by rubbing in mercury repeatedly. The effect of both these processes is greater on the thinner parts of the mirror than on the parts over the raised design. Hence the unequal convexity, which gives the reflection of the design from the face of the mirror.

**Missions.** (I. ROMAN CATHOLIC.) The Catholic religion was first preached in Japan about the middle of the sixteenth century. Contemporary documents inform us that this im-

portant event was brought about in the following manner. While St. Francis Xavier was evangelising India and the Sunda Islands, a Japanese fugitive named Anjirō, a native of Kagoshima, was introduced to him. Anjirō met with a kind reception, and having accompanied Xavier to Goa, was there baptised together with his two servants. This was in A.D. 1548. Xavier then formed the design of evangelising Japan,—a design which was confirmed in the following year, when the Saint, who happened to be at Malacca, received tidings from some Portuguese merchants of a supernatural occurrence which had brought into prominence the marvellous virtues of the Cross, and of the desire expressed by the Prince of Satsuma to send for Christian preachers and learn from their lips the truths of religion.

Xavier at once embarked for Japan, accompanied by his three Japanese neophytes. He arrived at Kagoshima on the 15th August, 1549, where he was received with distinguished courtesy by the prince, and forthwith began to preach the Gospel. During the two years and a half of his residence in Japan, he visited Hirado, Yamaguchi, and Kyōto. The numerous wonderful cures which he effected gave such weight to his words, that he had the consolation of being able to found in various places Christian communities animated with a zeal which led them to constitute themselves missionaries to the households of their friends and kinsmen. The converts were drawn from all classes alike. Noblemen, Buddhist priests, men of learning, embraced the faith with the same alacrity as did the poor and ignorant. By the year 1582 the whole island of Amakusa, and the greater part of the Gotō Islands and of the dai-miates of Ōmura and Yamaguchi were Christian. Christianity flourished likewise in Kyōto, and the holy name of Jesus was carried into the furthest provinces of the north. The total number of Japanese professing the Faith at that period is estimated at over six hundred thousand souls. The apostolate

was exercised by a hundred and thirty-eight European missionaries. They belonged without exception to the Society of Jesus; and their activity, inspired by the loftiest motives, had the most beneficial influence on the people of Japan.

A noteworthy feature of this nascent church is to be found in the embassies sent by the Christian princes to Rome, to wait on the head of the Church Catholic. The first of these embassies, organised by the Lords of Bungo, Arima, and Ōmura, left Japan early in 1582, and reached Rome in 1585. It was received with the greatest honours, as well by the Sovereign Pontiff himself as by the other European princes. The Japanese princes, in their letters to the Pope, expressed their heartfelt gratitude for the happiness vouchsafed to them of knowing Christ, and entreated His Holiness to look with favour on themselves and on all the Christians of their dominions.

Such was the happy situation of the Christian Church in Japan, when peril was suddenly conjured up by the jealousy subsisting between the Portuguese and the Spanish traders, who, in order to compass each other's ruin, began to libel each other to the Japanese authorities. At this juncture Toyotomi Hideyoshi—better known under the name of Taikō Sama—had, after a long series of civil wars, become Mayor of the Palace. Vainglorious to excess, he wished to see himself worshipped after the fashion of one of the ancient Japanese conquerors. The wrath of this ruler was roused, in A.D. 1587, by a tale brought to his ears of the bravado of a certain Portuguese captain,\* whereupon he issued an edict banishing all the missionaries, most of whom were Portuguese by birth. Thanks, however, to the missionaries' own prudence, the storm was stayed. They abstained from appearing in public, and remained shut up in

---

\* "The king, my master," so he is reported to have said, "begins by sending priests who win over the people; and when this is done, he despatches his troops to join the native Christians, and the conquest is easy and complete."

their colleges, busy with the compilation and publication of books both religious and philological, and with the education of a native priesthood. Until the breaking out of the persecution of 1596, the work of evangelisation proceeded apace. The new converts numbered about ten thousand yearly, though all were fully aware of the risk to which they exposed themselves by embracing the Catholic faith.

At length persecution came. The cause of it is to be sought, partly in the indiscreet zeal of the newly landed Franciscans and Dominicans, who were mostly Spaniards, and therefore disposed, as well from national as from sectional religious reasons, to look with an unfriendly eye on their predecessors, the Portuguese Jesuits, partly in the slanders circulated against all Christians by the Buddhist priests. The trial was one of fire and blood. History has no more edifying page than that which tells of the courage with which the neophytes met their doom.

Happily for the Church of Japan, the authority of the Mayor of the Palace was not respected equally in all the provinces of the empire. If in those districts which were more specially subject to him, his edicts were carried out with punctuality and rigour, the Daimyōs of certain other provinces did not fear to connive at the profession of Christianity in their domains. Some even went so far as openly to protect it. An example of this occurred in 1614, the very year in which more than sixty missionaries were expelled from Japan and nine Christian churches were destroyed at Nagasaki. In this year it was that Date Masamune, lord of Sendai, despatched an embassy to the Pope and to the King of Spain. The embassy consisted of a Franciscan monk, Father Sotelo, of one of Date's vassals named Hasekura Rokuemon, and of some fifty persons of lesser degree, all of whom were baptised during the voyage. Date, in his letter to the Pope, begged that a number of missionaries might be sent to preach the Gospel in his dominions.

At the beginning of the seventeenth century, the Japanese Christians numbered about one million,—the fruit of half a century of apostolic labour accomplished in the midst of comparative peace. Another half-century of persecution was about to ruin this flourishing church, to cut off its pastors, more than two hundred of whom suffered martyrdom, and to leave its laity without the offices of religion. In vain did the Christians attempt secrecy and endeavour to conceal a few priests. A price was set on the priests' heads, and their enemies, the more surely to discover both them and their native converts, had recourse to denunciation by spies and to the infamous obligation of trampling on the cross.\* The edicts ordering these measures remained in force for over two centuries

Nevertheless the Church of Japan was not forgotten. The Jesuit Father Sidotti and others, nothing daunted, disembarked on the Japanese coast at intervals during the eighteenth century, but were at once thrown into prison. In 1846 the Pope nominated a bishop and several missionaries, who took up their station in the neighbouring Luchu Islands, and entered Japan on the signing of the treaties of 1858. These men had the joy, in 1865, to discover several Christian communities round about Nagasaki, surviving the ruin of the church of their forefathers over two centuries before. They had preserved certain prayers, the rite of baptism, and a few books. But if these Christian communities survived, the persecuting spirit survived also. In 1867-70, all those Christians—and they numbered over four thousand—who refused to forswear their faith, were torn from their native villages and distributed over various provinces of the empire, where they were kept as prisoners by the respective Daimyōs. After some years of exile, they were at length set at

---

\* Specimens of the crosses used for this purpose are preserved in the Museum at Ueno, Tōkyō. They are little plates of yellow copper, on which are represented in relief the Passion of Our Lord and other sacred scenes.

liberty in 1873. The Church of Japan, thus restored, is now slowly but surely developing, thanks to the toleration enjoyed under the Imperial Government.

The Church was governed from 1846 to 1877 by a single bishop, from 1877 to 1888 by two bishops, from 1888 by three, and since July, 1891, by an archbishop and three bishops, whose respective residences are at Tōkyō, Ōsaka, Nagasaki, and Hakodate. The Catholic population of the empire amounted, on the 1st September, 1896, to 52,177 souls, as against 44,300 in 1891, 40,538 in 1889, and 35,886 in 1887. They are grouped in 336 stations or congregations, spread more or less all over the country, but most thickly in the island of Kyūshū. The clergy consists—besides the archbishop and bishops,—of 93 European missionaries and 20 Japanese priests. There are also 25 European teachers and 94 nuns (of whom 83 are European and 11 Japanese) engaged in teaching, and having the management at their own cost and responsibility of 5 middle schools and 20 homes for orphans with 2,021 inmates, and 29 industrial schools. The missionaries are assisted by 321 catechists, besides 235 women employed in nursing the sick and in giving catechetical instruction.

II. ANGLICAN. The Church of England, in conjunction with the Episcopal Churches of America and Canada, has missions collectively designated by the title of *Nihon Sei Kōkwai*, or the Church of Japan. The origin of this church goes back to the year 1859, when two American clergymen settled in Nagasaki. The missions in Tōkyō, both American and English, were started at the same time, in 1873. There are now 5 bishops—one American and four English—some 53 foreign and 35 Japanese priests and deacons, and 70 foreign lay workers of both sexes, besides a large body of Japanese catechists and school teachers, and over 6,000 Church members. The increase in numbers has been steady during the past few years, as has also the amount contributed from native sources

for self-support. The affairs of the Church are managed by a synod consisting of the bishops and of delegates from the clergy and laity, both foreign and Japanese. These delegates are themselves elected at the local synods, which are presided over by their respective bishops, and held annually in the various jurisdictions of North and South Tōkyo, Kyōtō, Ōsaka, Kyūshū, and Hokkaidō, into which the whole country has now been divided. The general synod meets once in three years. The aim of the Church is to be in communion with, but not in subjection to, the Churches of England and America,—in fact, to occupy in Japan much the same position as the Anglican Church occupies in the United States.

III. PROTESTANT. In 1859, shortly after the arrival of the earliest Anglican missionaries, representatives of the American Presbyterian and Dutch Reformed Churches landed in Japan, and the Protestant missions have ever since continued to be chiefly in American hands. The first baptism took place in 1864, the first native church was organised at Yokohama in 1872, and the first church building was consecrated in 1875. In 1872 the work of Biblical translation, till then hindered by want of sufficient familiarity with the language, was vigorously undertaken. It should be added that the existence of several Chinese versions, which all educated Japanese could read, rendered the necessity for a version in the vernacular less urgent than would have been the case in other lands. A complete version of the New Testament was published in 1880, of the Old Testament in 1887. Meanwhile the opposition of the government to Christianity faded away, and the number of converts increased—slowly at first, for in 1872 no more than ten persons had been baptised, but afterwards by leaps and bounds. Besides actual evangelising work, much general school work has been engaged in, sometimes with the enlightened object of sapping the secular outposts of Japanese religious error, sometimes rather as a means towards obtaining a passport to enable the

bearer to reside in the interior. The venerable Dr. Hepburn and others have also combined the art of healing bodies with that of curing souls.

The leading Protestant denominations that have missions in Japan may be classified under four heads, which we notice in the order of their local importance:—

The *Presbyterians*, representing seven religious societies, number 49 male and 53 female missionaries,\* whose labours are aided by those of 49 ordained and 129 unordained Japanese fellow-workers—the whole force being distributed over 71 organised churches, besides many out-stations. In 1896 (the last year for which statistics are available), the present membership numbered over 10,588, and contributed during that year a sum of 16,160 *yen*. They supported 5 boarding schools for boys and 12 for girls, together with 9 day-schools, the aggregate number of scholars being 1,870. To them belongs the Meiji Gakuin, the most important Christian College in Tōkyō. The various Presbyterian bodies—American and Scotch—amalgamated in the year 1877 into a single church, which is now known as the *Nihon Kirisuto Kyōkwai*, or Church of Christ in Japan, and which, no longer insisting on such standards of doctrine as the Canons of the Synod of Dort, the Westminster Confession of Faith, the Shorter Catechism, or the Heidelberg Catechism, confines itself to a much simpler “Confession of Faith,” consisting mainly of the Apostles Creed.

The *Congregationalist*, or *Kumi-ai*, Churches represent almost exclusively one body,—the American Board of Commissioners for Foreign Missions. In 1896 there were 23 male and 28 female workers on the staff, besides 27 ordained and 71 unordained Japanese. There are 72 organised churches, nearly

---

\* If the wives of married missionaries be included in the enumeration, the number of female missionaries in this and the other Protestant missions will be considerably increased.

half of which are self-supporting, and 9,863 members, who in 1896 contributed 18,451 *yen*.

The *Methodists*, representing four American societies and one Canadian, consist of 54 male and 49 female missionaries, 137 ordained and 162 unordained Japanese fellow-workers, 125 organised churches, and 7,764 members, who in 1896 contributed 18,472 *yen*. The Methodists have 19 boarding-schools and 33 day-schools, with a total of 4,278 scholars.

The *Baptists* represent four American societies, and number 32 male and 26 female missionaries, with 19 ordained and 62 unordained Japanese workers in 33 organised churches, with a membership of over 2,500, who in 1896 contributed 2,745 *yen*. The two leading Baptist bodies support a theological seminary, one academy for boys, and five schools for girls, with a total of 600 pupils.

The *Salvation Army*, under "Colonel" Wright, invaded Japan in 1895, and has fought with a will to secure a membership up to date of 130. Seventeen hundred copies of the *Toki-no Koe* (the Japanese edition of the "War-Cry") are published fortnightly.

Besides the above, must be mentioned the *Society of Friends*; furthermore the American and London *Religious Tract Societies*, which have joint head-quarters at Tōkyō, and the *Young Men's Christian Association of Japan*, etc., the total number of missions represented being thirty.

Numerous as are the Protestant bodies labouring on Japanese soil, and widely as some of them differ in doctrine, fairness requires it to be stated that they rarely, if ever, have made Japan the scene of sectarian strife. The tendency has been rather to minimise differences,—a tendency exemplified in the amalgamation of the various Presbyterian churches, the proposed union of these with the Congregationalists and the cementing influence of the Young Men's Christian Association work. At one time orthodoxy and union were menaced by the advent of the so-called "Liberal Churches"—the Unitarians and

Universalists (1889-90), who for a brief season seemed likely to obtain a hold over the Japanese mind. But the Unitarian mission is now practically extinct, and the Universalists have little or no following. Similar poor success has attended the German Evangelical Mission.

IV. The ORTHODOX RUSSIAN CHURCH, presided over by Bishop Nicolai, and served by 22 native priests and deacons, has had a mission in Japan ever since the year 1861. It claims a total following of over 23,000. The Russian cathedral, which was opened for worship in 1891, is the only ecclesiastical edifice in Tōkyō with any pretensions to architectural splendour. From the eminence on which it stands, it seems to dominate the whole city.

V. GENERAL CONSIDERATIONS. To those who can look back five-and-thirty, or even only five-and-twenty years, the varying fortunes through which Christianity has passed in Japan are most striking, indeed well-nigh incredible. As late as 1870 it was perilous for a Japanese to confess Jesus. Later on such confession became rather fashionable than otherwise. Then it was hard work for a missionary to obtain a native teacher. Now there are hundreds of ordained and unordained native preachers and teachers of Christianity. The old proclamation, which, since A.D. 1638, had prohibited the religion of Jesus as "a corrupt sect," was still posted on the notice-boards of the public thoroughfares in 1873. The government now openly tolerates the building of churches and the performance of Christian funeral rites, though we are not aware of the old anti-Christian laws having ever been formally repealed. Such were the strides made during the decade from 1878 to 1888 as to suggest the thought that in future the danger might be, no longer from persecution, but from worldly-minded favour. Some of the leaders of Japanese thought, while professing themselves personally indifferent to all religions, used then cold-bloodedly to advocate the adoption of Christianity as a school of

morals and music, and as likely to be advantageous in political negotiations with the powers of the West! To make all Japan Christian by edict some fine morning, might not have been on the programme of the Japanese statesmen of the hour; but that something of the kind should happen before the end of the century, appeared far less unlikely than many things that have actually happened in this land of realised improbabilities.

But 1888 witnessed reaction in every department of Japanese life and thought. Angry with Europe for the failure of treaty revision, the leading classes turned their backs on all such European things as appeared to them non-essential,—not on the electric light of course, or on banking, or surgery, or anything of evident material utility, but on European dress, European cookery, European amusements, European ideals. Christianity, being alien and non-utilitarian, has come in for its share of this cold wave. Notwithstanding a rapidly growing population, the number of converts practically stands still. During the last year for which statistics are available, it even diminished. The spirit of the converts too has changed, their regard for the missionaries has cooled, they want to walk alone. Not only so:—they want to Japonise Christianity itself, in essence as well as in outward form, and seem inclined to throw overboard even that minimum of dogma on which the Protestant missionaries had felt bound to insist. The Dōshisha, a Christian University of Kyōto, founded with American money by the Rev. Joseph Neesima,\* an early convert, has recently supplied a marked instance of these separatist and anti-doctrinal leanings, things coming at last, in 1896, to such a pass that the ties connecting this institution with the American Board had to be severed. Evidently a modern Bossuet would find in Japan material for a new chapter on the “Variations of Protestantism” within the short space of a single generation.

---

\* Properly *Niishima* or *Nijima*; but the awkward transliteration of former days has been usually retained for this particular name.

Prophesying is no safe occupation nowadays. Nevertheless, we hazard a guess to the effect that in the future the Protestants of Japan will be occupied with questions of morals and practice—the temperance question, for instance, and Sunday observance—rather than with subtle doctrinal theories, the Japanese mind being too essentially unspeculative for the fine distinctions of the theologians to have any charm for it, much less for it to seek to split new hairs for itself. The failure of Buddhist metaphysical abstractions to take any hold of the national sympathies, is a finger-post in history pointing to what may be expected in the future. People will never greatly excite themselves about beliefs that sit lightly on them; and Japanese religious beliefs have always sat lightly. Has not the whole attitude of the Far-Eastern mind with regard to the supernatural been aptly described as one of “politeness towards possibilities?”

**Books recommended.** (I. Catholic.) *Histoire de la Religion Chrétienne au Japon*, by Father Crasset—*Histoire du Christianisme dans l'Empire du Japon*, by Father Charlevoix.—*Histoire de la Religion Chrétienne au Japon*, by Léon Pagès.—*La Religion de Jésus Ressuscitée au Japon* (1844-95), by Father Francisque Marnas.—The above are general accounts, or *résumés* of the subject. See also Hildreth's *Japan as it Was and Is*.—The literature of Catholicism in Japan is very voluminous, beginning with the *Jesuits' Letters* in the sixteenth and seventeenth centuries, and coming down to the special treatises by Léon Pagès (e. g., *Les Vingt-Six Martyrs Japonais* and *La Persécution des Chrétiens au Japon*), Satow, and others. Satow's researches are, for the most part, scattered through the volumes of the *Asiatic Transactions*; but one of his most interesting essays, entitled *The Jesuit Mission Press in Japan from 1591 to 1610*, giving extracts and fac-similes, was printed privately as a separate work.

(II. Protestant).—Rev. H. Loomis's *Statistics of Missions*, published yearly.—The *Reports* of the various missionary societies.

**Moral Maxims.** Few Japanese books are more likely to please the foreign student than two small volumes of practical ethics, entitled respectively *Jitsugo Kyō*, or “Teaching of the Words of Truth,” and *Dōji Kyō*, or “Teaching for the Young.” They are ascribed to Buddhist abbots of the ninth century; but the doctrine of both has a Confucian no less than a Buddhist flavour, and many of the maxims are transcribed bodily from Chinese sources. Both collections were for many ages as

familiar to the youth of Japan as the Sermon on the Mount is to us. The following may serve as specimens :—

“ Treasures that are laid up in a garner decay : treasures that are laid up in the mind decay not.

“ Though thou shouldst heap up a thousand pieces of gold : they would not be so precious as one day of study.

“ If thou, being poor, enter into the abode of the wealthy : remember that his riches are more fleeting than the flower nipped by the hoar-frost.

“ If thou be born in the poor man's hovel, but have wisdom : then shalt thou be like the lotus-flower growing out of the mud.

“ Thy father and thy mother are like heaven and earth : thy teacher and thy lord are like the sun and moon.

“ Other kinsfolk may be likened unto the rushes : husbands and wives are but as useless stones.\*

“ He that loveth iniquity beckoneth to misfortune : it is, as it were, the echo answering to the voice.

“ He that practiseth righteousness receiveth a blessing : it cometh as surely as the shadow followeth the man.

“ Be reverent when thou goest past a grave : alight from thine horse when thou goest past a Shintō shrine.

“ When thou art near a Buddhist temple or pagoda, thou shalt not commit any unclean act : when thou readest the sacred writings, thou shalt do nothing unseemly.

“ Human ears are listening at the wall : speak no calumny, even in secret.

“ Human eyes look down from the heavens : commit no wrong, however hidden.

“ When a hasty word hath once been spoken : a team of four horses may pursue, but cannot bring it back.

---

\* According to the Confucian ethical code, which the Japanese adopted, a man's parents, his teacher, and his lord claim his life-long service, his wife standing on an immeasurably lower plane.

"The flaw in a mace of white jade may be ground away: but the flaw of an evil word cannot be ground away.

"Calamity and prosperity have no gate: they are there only whither men invite them.

"From the evils sent by Heaven there is deliverance: from the evils we bring upon ourselves there is no escape.

"The Gods punish fools, not to slay but to chasten them: the teacher smiteth his disciple, not from hatred but to make him better.

"Though the sins committed by the wise man be great, he shall not fall into hell: though the sins committed by the fool be small, he shall surely fall into hell.

"Life, with birth and death, is not enduring: and ye should haste to yearn after Nirvâna.

"The body, with its passions, is not pure: and ye should swiftly search after intelligence.

"Above all things, men must practise charity: it is by almsgiving that wisdom is fed.

"Less than all things, men must grudge money: it is by riches that wisdom is hindered."

**Books recommended.** Full translation of the *Dōji Kyō* in Vol. IX. Part III. of the "Asiatic Transactions," and of the *Jitsugo Kyō* in the "Cornhill Magazine" for August, 1876.

**Mourning.** The Japanese, like other nations under Chinese influence, are very strict on the subject of mourning. Formerly three mourning codes (*Bukki Ryō*) prevailed simultaneously. Of these one was for Shintō priests, another for the Kyōto nobility, and yet another for the Daimyōs and samurai. The last alone has survived, and its prescriptions are followed by all the well-to-do classes. Mourning, be it remarked, consists of two things—the wearing of mourning garments, and abstinence from animal food. This premised, the following table is self-explanatory:—

			Garments.	Food.
Great-great-grandparents <sup>†</sup>	...	...	30 days	10 days
Great-grandparents <sup>†</sup>	...	...	90 "	20 "
Grandparents <sup>†</sup>	...	...	150 "	30 "

Infants under three months are not mourned for, and the period of mourning for children is greatly reduced if they are under seven years of age.

Whenever a death occurs in the family of an official, he must at once report it to the department to which he is attached. The theory is that he should remain at home during the whole of the proper period of mourning. But as this would cause inconvenience in practice, he is always absolved from the operation of the rule, and ordered to "attend office though in mourning." When any member of the Imperial family dies, a

\* On the paternal side. The inferior position occupied in the East by women causes a considerable reduction to be made in the period of mourning for corresponding relatives on the maternal side. A maternal grandfather, for instance, is only mourned for during 90 days, a maternal uncle during 30 days.

† A man's legitimate wife is considered the "legal mother" of any children he may have by a concubine. Such children mourn their "legal mother's" death during the period indicated in the text.

notification is issued prohibiting all sound of music throughout the land for the space of three days, and even for a longer period if the deceased personage stood very near the throne.

Periodical visits to the grave of the deceased—*haka-mairi*, as they are termed—form an essential part of the Japanese system of mourning. The days prescribed by custom for these visits are the seventh day after decease, the fourteenth, twenty-first, thirty-fifth, forty-ninth, and hundredth; then the first anniversary, the third anniversary, the seventh, thirteenth, seventeenth, twenty-third, twenty-seventh, thirty-third, thirty-seventh, fiftieth, and hundredth. On the more important of these occasions Buddhist services are performed, for instance, on the first and third anniversaries. By some, especially among the poorer classes, the whole of this extensive programme proves to be impossible of fulfilment, and even in the upper class not a few are now to be found who sensibly imitate Europe by moderating the outward symbols of grief; but the seventh and thirty-fifth days and the first and third anniversaries are never neglected. The observance of the anniversaries of several members of a family is sometimes lumped together when the dates nearly coincide, provided always that none of the honoured dead be kept waiting beyond his due time. All these numbers are calculated according to the old Japanese “inclusive” system of reckoning, which reduces by one every number except one itself. Thus the so-called thirty-fifth day is really the thirty-fourth, the so-called third anniversary is really the second, and so on. White is the colour of mourning—not black as in Western lands.

**Moxa.** “Moxa” is one of the few Japanese words that have found their way into the English language. It is properly *mogusa*, a contraction of *moë-kusa*, that is “the burning herb,”—a name given, on account of its use, to the plant which we call “mugwort.” It is employed as a cautery, fragments of it being rolled into a tiny cone, and then applied to the body and set fire to.

In the old Chinese and Japanese system of medicine, burning with the moxa was considered a panacea for almost every human ill. It was prescribed for fainting fits, nose-bleeding, rheumatism, and a hundred other ailments. A woman unable to bear the pangs of child-birth was to be relieved by having three places burnt with it on the little toe of her right foot. In addition to this, the moxa was used as a punishment for children, many being burnt—generally on the back—when more than usually naughty. This practice, which is not yet obsolete, accounts for some at least of the cicatrices on the naked backs and legs of jinrikisha-men and other coolies. There is a well-known story of a child, who, having committed arson, and rendered himself thereby liable, under the former severe law of the realm, to be burnt alive, was dragged out with impressive pomp to the place of execution, but let off at the last moment with an unusually severe application of the moxa.

**Book recommended.** Whitney's *Notes on the History of Medical Progress in Japan*, published in Vol. XII. Part IV. of the "Asiatic Transactions," especially p. 289 *et seq.*, from which some of our statements have been taken.

**Music.** Music, if that beautiful word may be allowed to fall so low as to denote the strummings and squealings of Orientals, is supposed to have existed in Japan ever since mythological times. But Japanese music as at present known—its lutes, flutes, drums, and fiddles of various sorts—came over from China, like most other things good and bad, in the train of Buddhism. The *koto*, a sort of lyre which is the most highly esteemed of modern instruments, was gradually evolved from earlier Chinese models, and perfected in the first half of the seventeenth century by Yatsushashi, who has been styled the father of modern Japanese music. The *samisen*,\* or "three strings," now the favourite instrument of the singing-girls and of the lower classes generally, seems to have been introduced from Manila as recently as the year 1700.

---

\* More often pronounced *shamisen*; but *samisen* is considered correct.

The perfection of Japanese classical music may be heard at Tōkyō from the Band of Court Musicians attached to the Bureau of Rites. Having said that it may be heard, we hasten to add that it cannot be heard often by ordinary mortals. The easiest way to get a hearing of it is to attend one of the concerts given by the Musical Society of Japan (an association founded in 1886 for the cultivation alike of Japanese and European music), at which the Court Musicians occasionally perform. A more curious ceremony still is the performance by these same musicians, at certain Shintō festivals, of a *silent* concert. Both stringed and wind instruments are used in this concert. But it is held that the sanctity of the occasion would be profaned, were any sound to fall on unworthy ears. Therefore, though all the motions of playing are gone through, no strains are actually emitted! This is but one among many instances of the strange vagaries of the Japanese musical art, and of the extreme esoteric secrecy in which the families hereditarily entrusted with the handing down of that art enshroud their knowledge.\*

The chanting of the Buddhist liturgy, also, at certain temple services is considered classical. This chanting has been held by some to resemble the Ambrosian and early Gregorian tones; but local colouring is sufficiently provided for, inasmuch as each performer utters the strain in the key that best suits the pitch of his own voice. For this classical music there exists a notation—a notation which is extremely complicated. There is none for the more popular instruments—for the *samisen* and

---

\* The existence of these "silent concerts" was set in doubt by a critic of the first edition of this work. Never having heard, or rather seen, any ourselves, we describe them on the authority of Mr. Isawa, who, in a private communication on the subject, reminds us that such esoteric mysteries would not willingly be alluded to by their old-fashioned possessors, least of all in reply to the scientific enquiries of a foreigner, and that the very explanations given—supposing any to be given—would probably be couched in ambiguous language. We may add that some mystery is made about certain tunes for such common instruments as the *koto* and *samisen*, only those persons being allowed to play them who have studied and paid money to receive diplomas.

*kokyū*,—while that which exists for the *koto* is kept as an esoteric secret by the heads of the profession, the teachers of the teachers. An attempt to popularise it was made about the middle of the last century; but the teachers, deeming their authority threatened, successfully opposed the innovation, much as codification is opposed by English lawyers.

It may seem odd that so fundamental a question as the nature of the Japanese scale should still be a matter of debate. Yet so it is. According to Dr. Muller, one of the earliest and most interesting writers on the subject, this scale consists, properly speaking, of five notes of the harmonic minor scale, the fourth and seventh being omitted, because, as there are five recognised colours, five planets, five elements, five viscera, and so on, there *must* also be five notes in music—a method of reasoning novel perhaps to European ears, but only too familiar to students of Chinese and Japanese literature. Mr. Piggott believes the normal Japanese scale to agree with that of modern Europe, though he allows the prevalently pentatonic character of most of the tunes actually composed. But Drs. Knott and DuBois by no means agree with him, and Dr. Divers twits Mr. Piggott with setting aside the peculiarities that distinguish the Japanese from the European system instead of accounting for them. The late Mr. Ellis's opinion on the subject will be found in his paper mentioned below. But Mr. Isawa, the greatest Japanese authority on music, says, in a private communication addressed to us, that Mr. Ellis was misled on some important points by his having given too much weight to the performances of an ignorant woman at the "Japanese Village" in London. As well, says Mr. Isawa, take a jinrikisha-man for referee in questions of grammar and diction, as such a woman for an authority on a matter so delicate as musical intervals. According to Mr. Isawa, the second, fourth, and sixth in the classical music of Japan, are identical with the same intervals of the modern European scale, but the third (major third) is sharper, and the

seventh flatter. The popular or *samisen* scale is different. Like the scale of mediæval Europe—we still quote Mr. Isawa—it has for its chief peculiarity a semitone above the tonic, which is one among various reasons for believing the *samisen*, together with its scale, to have found its way here from the Spaniards at Manila, and not from Luchu according to the current Japanese opinion. Mr. R. Dittrich, the latest investigator, diverges from all his predecessors, and establishes three separate scales, which are properly pentatonic, but sometimes made heptatonic through the addition of two auxiliary notes. These generally omitted notes are to our ears the most important of all, namely the third and the sixth.

Be the scale what it may, the effect of Japanese music is, not to soothe, but to exasperate beyond all endurance the European breast. Miss Bacon, in her charming book entitled *Japanese Girls and Women*, demurely remarks: "It seems to me quite fortunate that the musical art is not more generally practised." That is what every one thinks, though most Europeans of the stronger sex would use considerably stronger expressions to relieve their feelings on the matter. Japanese music employs only common time. Harmony it has none. It knows nothing of our distinction of modes, and therefore, as a writer on the subject has pointed out, it lacks alike the vigour and majesty of the major mode, the plaintive tenderness of the minor, and the marvellous effects of light and shade which arise from the alternations of the two. Perhaps this is the reason why the Japanese themselves are so indifferent to the subject. One never hears a party of Japanese talking seriously about music; musical questions are never discussed in the newspapers; no one goes to a temple service

"Not for the doctrine, but the music there;"

a Japanese Bayreuth is unthinkable. Men on the spree send for singing-girls chiefly in order to ogle and chaff them, and to help along the entertainment by a little noise. To ask

the name of the composer of any tune the girls are singing, is a thing that would never enter their heads.

Still, of course pathology is as legitimate a study as physiology. Those, therefore, who wish to investigate more minutely the ways and means whereby injury is inflicted on sensitive ears should consult the authorities enumerated below, especially Mr. Piggott's book, where will be found capital illustrations of Japanese musical instruments, together with specimens of tunes transcribed into the European notation, so far—for that is one of the points in dispute—as such transcription is possible.

**Books recommended** *The Music and Musical Instruments of Japan*, by F. T. Piggott (an expansion, beautifully illustrated, of his paper in the "Asiatic Transactions" mentioned below) — *On the Musical Scales of Various Nations*, by A. J. Ellis, F.R.S., printed in the "Journal of the Society of Arts" for the 27th March, 1885. — *Some Japanese Musical Intervals*, by Rev. Dr. Veeder, in Vol. VII Part II. of the "Asiatic Transactions." Various papers by F. T. Piggott, Dr. F. DuBois, and Dr. C. G. Knott, in Vol. XIX. Part II. of the "Asiatic Transactions." — *Ewige Notizen über die Japanische Musik*, by Dr. Müller, in Vol I of the "German Asiatic Transactions," and R. Dittich's excellent paper in Part 58 of the same. For specimens of Japanese music transcribed into the European musical notation and with the words of the songs in Roman letters, see a small book published in 1888 by the Tôkyô Academy of Music, and entitled *Collection of Japanese Koto Music*. The most delicate-minded need not fear having their morals tainted by strumming through this little volume, as the editors make a point of telling us in their preface that in this edition of the old Koto music, "for those words and tunes occurring therein, which are liable to offend the public feelings on account of their vulgarity and meanness, pure and elegant ones have been substituted, thus preventing their baneful effects upon the social character." At the same time, the few entirely new compositions of their own, which the compilers have ventured to add, have all "been prepared with a care not to injure that virtue which is inherent in our old Koto music." Historical accuracy is thus as perfectly safeguarded as taste and morals.

### Mythology. See HISTORY.

**Names.** The Japanese have more than one kind of surname, more than one kind of Christian (or should we say heathen?) name, besides nicknames, pseudonyms, and even posthumous names. The subject is a labyrinth. We merely sketch out the following as a clue to guide the student in threading his way through it. He will find, then, that there are:—

1. The *kabane* or *sei*, a very ancient and aristocratic sort of family name, but now so widely diffused as to include several surnames in the narrower sense of the word. The grand old names of *Minamoto*, *Fujiwara*, *Tachibana*, are *kabane*.

2. The *uji* or *myōji*, our surname, and dating like it only from mediæval times. Most names of this class were originally nothing more than the names of the localities in which the families bearing them resided, as *Yama-moto*, "foot of the mountain;" *Ta-naka*, "among the rice-fields;" *Matsu-mura*, "pine-tree village."

3. The *zokumyō* or *tsūshō*, literally, "common name." It corresponds pretty closely to our Christian name. Very often such names end in *tarō* for an eldest son, in *jirō* for a second, in *saburō* for a third, and so on down to *jūō* for a tenth son, as *Gentarō*, *Tsunejirō*, etc.; or else these distinctive terminations are used alone without any prefix. They mean respectively "big male," "second male," "third male," and so on. Other *zokumyō* end in *emon*, *suke*, *nojō*, *bei*—words formerly serving to designate certain official posts, but now quite obsolete in their original acceptance.

4. The *nanori* or *jitsumyō*, that is, "true name," also corresponding to our Christian name. Examples of it are *Masashige*, *Yoshisada*, *Tamotsu*, *Naka*. Until recently, the *jitsumyō* had a certain importance attached to it and a mystery enshrouding it. It was used only on solemn occasions, especially in combination with the *kabane*, as *Fujiwara no Yoritugu* (*no*—"of"). Since the revolution of 1868, there has been a tendency to let No. 1 retreat into the background, to make No. 2 equivalent to the European surname, and to assimilate Nos. 3 and 4, both being employed indiscriminately as equivalents of the European Christian name. If a man keeps No. 3, he drops No. 4, and *vice versa*.

5. The *yōmyō*, or "infant name." Formerly all boys had a temporary name of this sort, which was only dropped, and the

*jitsumyō* assumed, at the age of fifteen. Thus the child might have been *Tarō* or *Kikunosuke*, while the young man was *Hajime* or *Tamotsu*. The classes of names next to be mentioned, though all existing in full force, are less important than the preceding classes.

6. The *azana*, translated "nickname," for want of a better equivalent. Such are *Kunteki*, *Bunrin*, *Sotan*, *Sakitsu*. Chinese scholars specially affect these, which are not vulgar, like our nicknames, but on the contrary, highly elegant.

7. The *gō*. Pseudonym is the nearest European equivalent, but almost every Japanese of a literary or artistic bent has one. Indeed he may have several. Some of the Japanese names most familiar to foreign ears are merely such pseudonyms assumed and dropped at will, for instance, *Hokusai* (who had half-a-dozen others), *Ōkyo*, and *Bakin*. Authors and painters are in the habit of giving fanciful names to their residences, and then they themselves are called after their residences, as *Bashō-an* ("banana hermitage"), *Suzunoya-no-Aruji* ("master of the house with a bell"). Such names often end in *dōjin*, *sanjin*, *koji*, *okina*, that is, "hermit," "mountaineer," "retired scholar," "aged man."

8. The *haimyō* and *gagō*. These are but varieties of the *gō*, adopted by comic poets and by painters.

9. The *geimyō*, "artistic name," adopted by singing and dancing-girls, actors, story-tellers, and other professional entertainers of the public. Thus, *Ichikawa Danjūrō* is not the real name, but only the hereditary "artistic name," of the most celebrated of living Japanese actors. To his friends in private life, he is Mr. Horikoshi Shū (Horikoshi is the *myōji*, No. 2; Shū is the *jitsumyō*, No. 4).

10. The *okuri-na*, or posthumous honorific appellation of exalted personages. These are the names by which all the Mikados are known to history—names which they never bore during their lives. *Jimmu Tennō* and *Jingō Kōgō* are examples.

11. The *hōmyō* or *kaimyō*, a posthumous appellation chosen by the Buddhist priests for each believer immediately after death, and inscribed on the funeral tablet. Such names end in *in*, *koji*, *shunshi*, *shinmyō*, *dōji*, etc., according to the age, sex, rank, and sect of the deceased.

It is characteristic of Japanese ways that the native friend who assisted in the above classification never thought of mentioning women's names (*yobi-na*), which we will call No. 12. These are generally taken from some flower or other graceful natural object, and are preceded by the word *O*, "honourable." Thus we have *O Kiku*, "Chrysanthemum;" *O Take*, "Bamboo;" *O Gin*, "Silver;" *O Hana*, "Spring-time," etc., etc. But if the name has more than two syllables, the honorific prefix is dropped.

It was formerly the custom for a man to alter his name at any crisis of his career. Even now, adoption and various other causes, frequently entail such changes. The card is brought in to you of a Mr. Abō of whom you have never heard:—the man himself walks into the room, when lo and behold! it is your old friend Hayashi. A teacher in mid-term suddenly loses track of a student named Suzuki, and has to pick it up as best he may in an apparent new-comer called Mitsunashi. Not human beings only, but places exhibit this fickleness. Hundreds of place-names have been altered during the present reign, to the dire confusion of geographical and historical studies. The change of Yedo to Tōkyō is only the best-known of these. The idea, which is an old Chinese one, is to emphasise by the adoption of a new name some new departure in the fortunes of a city, village, mountain, school, etc. It is as if we should have changed the name of London and other places at the Reformation, or of Eton when the new Latin grammar was introduced.

Bureaucratic re-adjustments have acted extensively in the same direction, hamlets, for instance, being grouped together and receiving a general name, which may be either totally new or

else that of one or other member of the group. In the former case one is entirely at sea; in the latter, one is confused between the larger and the smaller entity. Another peculiarity is what may be termed the transmission of names. A teacher, for instance, hands on his own pseudonym to a favourite pupil, in order to help to start him in popular favour. In this manner a bit of faience may be signed "Kenzan," and yet not be by the original potter Kenzan at all. In many cases only a part of the name is given or adopted. The Shōguns of the Tokugawa dynasty offer a good example of this remarkable custom. The name of the founder of the house being *Ieyasu*, his successors styled themselves *Iemitsu*, *Ietsuna*, *Ienobu*, and so on.

Now were we, or were we not, right in the statement with which we set out, that Japanese names are a labyrinth?

**Naturalisation.** See third paragraph of p. 18.

**Navy.** The Japanese have from early days been a seafaring race. They proved this for centuries by their repeated piratical attacks on the coasts of Korea and China, which became so disastrous that the timid Chinese government for a time let a belt of land along the coast lie waste as a protection. History repeats itself:—the same expedient had been used by the Franks against the Norman rovers.

Little is known of the Japanese navy during the middle ages. Both the central government and the Daimyōs possessed warships which were worked like the galleys of the Mediterranean, partly with sails and partly with oars; and although the outward form differed from that of the galley, the internal arrangements were the same. These ships played an important part in the domestic feuds of the times. The national annals tell of their presence at the famous battle of Dannoura in A.D. 1185 between the Taira and Minamoto clans, and again in the still more famous expedition to Korea under Hideyoshi at the end of the sixteenth century. This ancient navy, however, disappeared without leaving any traditions.

When foreign powers appeared in Japanese waters, the advantage of modern steam-ships of war became evident to the Shōgun and to several of the more powerful Daimyōs, who purchased some from abroad. Under the Shogunate a small but well-arranged arsenal was built at Yokosuka by French naval architects. The same feudal government sent young men to Holland for instruction in seamanship, and an English naval mission was brought out to Japan. The first ships acquired were used by both parties during the war of Restoration, and received their baptism of fire at the engagement off Hakodate, where Admiral Enomoto commanded the rebel flotilla. Ever since the peace which followed the suppression of the later Satsuma Rebellion in 1877, the new government has worked energetically to form a navy suited to the country's requirements. The task was difficult, personnel as well as material having to be created. Necessary schools were established. For the education of officers there are colleges at Kure near Hiroshima and at Tōkyō. Gunnery and torpedo schools have also been organised. A suitable law of conscription, based largely on the volunteer system, is in force.

As regards ships and their armament, the Yokosuka dockyard continued to build vessels, while the naval arsenal at Tōkyō turned out smaller guns and ammunition; but most ships and guns were ordered from abroad, chiefly from England and France, and every effort was made to keep the armament up to date. A torpedo flotilla was also organised. A large new arsenal was commenced at Kure, and a smaller at Sasebo in Kyūshū. Great attention was paid to the training of officers and men. Besides ordinary training ships, a standing squadron was always kept afloat, which went out every year for long cruises.

When the war with China broke out in 1894, the navy was consequently well-prepared to take its share in the fray, though numerically weaker than the Chinese fleet. Its real fighting

strength was then only 11 or 12 cruisers of displacements varying between 2,500 and 4,500 tons, besides gun-boats and torpedo boats. Real battle-ships there were none.

At the battle of the Yalu, off the coast of Korea, the Japanese forces under Admiral Itō completely vanquished and destroyed four of the enemy's ships,—a victory which demonstrated the superior seamanship and discipline of the Japanese. A remarkably daring deed performed during this action calls for record. The Inspector of the Fleet, Admiral Kabayama, being present on board an armed merchant steamer, broke through the enemy's line in order to join his consorts. Subsequently the navy attacked the strongly fortified position of Wei-hai-wei from the sea-side, while an army corps co-operated on land. Several brilliant torpedo-boat attacks were here made on the Chinese squadron which had sought shelter at the anchorage, while the fleet was kept constantly engaging the forts,—combined naval and military operations which resulted in the capture and destruction of the whole northern Chinese fleet. The Japanese Navy also did good service at the capture of Port Arthur, and during the operations which led to the occupation of Formosa.

Through these successful actions the navy gained immense credit, and when, after the war, the necessity was felt of increasing the naval and military strength of the country, popular feeling was unhesitatingly in favour of giving the former a very large expansion. For that purpose a sum of 213 million *yen* will now be spent, and it is intended that, by the end of 1906, the existing strength shall be increased by six battle-ships of from 12,000 to 15,000 tons displacement (besides one captured from the Chinese), six first-class cruisers of 9,000 tons, three second-class cruisers of 4,500 tons, two third-class cruisers of 3,000 tons, and a large mosquito fleet of torpedo-boats, catchers, gun-boats and a dépôt ship. At the same time, the number of naval stations will be increased. The new Japanese fleet, when finished, will have a total displacement of not far from 300,000

tons, and will, as regards homogeneity of design, speed, protection, and armament, be fully a match for any European fleet of the same size.

**Newspapers.** The founder of Japanese journalism was an Englishman, Mr. John Black, one of the earliest foreign residents of Yokohama. Before his time there no doubt existed street-criers (*yomi-uri*), who hawked small sheets roughly struck off from wooden blocks whenever some horrid murder or other interesting event took place. The *Kaigwai Shimbun* of 1864-5, published by "Joseph Heco,"\* was a step in advance. Then, in 1871, appeared a small quasi-journalistic venture, entitled the *Shimbun Zasshi*, believed to be inspired by Kido, a then prominent politician. But Mr. Black's *Nisshin Shinjishi*, started in 1872, was the first newspaper worthy of the name—the first to give leading articles and to comment seriously on political affairs. The seed once sown, Japanese journalism grew apace. There are now about fifteen hundred newspapers, magazines, journals of societies, etc., published in the empire. The most important newspapers appearing in the capital are the *Kwampō*, or "Official Gazette;" the *Nihon*, conservative and anti-foreign; the *Yomi-uri* and the *Mainichi*, progressionist; the *Nichi Nichi* generally regarded as an organ of Marquis Itō; the *Jiji Shimpō* and the *Kokumin*, independent; the *Chūgwai Shōgyū Shimpō*, commercial. The *Asahi*, the *Miyako*, and the *Yorozu Chōhō* cater for the middle and lower classes, the last-mentioned having a column in English. The *Japan Times* is published entirely in English. Among the magazines, politics and literature are represented by the *Taiyō*, the *Kokumin no Tomo*, and the *Sekai no Nihon*; pure literature by the *Teikoku Bungaku* and two or three others; red-hot Chauvinism by the *Nihon-jin*;

---

\* A native of the province of Harima, on the Inland Sea, who was cast away in a junk in the year 1850, rescued, and carried to America, where he lived for some years, returning as interpreter when Japan was opened. He died in 1897. The story of his checkered career is told in *The Narrative of a Japanese*.

Christianity by the *Rikugō Zasshi* and several others, and satire and humour by the *Maru-Maru Chimbun*, or Japanese "Punch." The names of Fukuzawa, Shimada, Tokutomi, Kuga, Asaina, Takegoshi, and Fukai may be mentioned among those of the leading Tōkyō journalists.

Newspapers, like books, are published in what is called the "Written Language,"—a literary dialect considerably removed from the colloquial both in grammar and in vocabulary, the simple plan of writing as one speaks having not yet approved itself to the taste of any Far-Eastern nation. But though the style of Japanese newspapers is not popular, their prices are. Most of the larger journals charge only two cents—about a half-penny—for a single copy, and from forty to fifty cents per month; the smaller journals, one and a half cents for a single copy, and twenty or thirty cents per month. Several have rough illustrations. Most now have *feuilletons* devoted to the publication of novels in serial form.

The Japanese press-laws, hitherto extremely rigorous, were at length softened in 1897. The Ministers of the Army and Navy, it is true, retain the power of prohibiting the sale or distribution of any issue of a newspaper that may disclose military secrets, and a similar power is vested in the Minister of Foreign Affairs to suppress the publication of anything tending to embroil Japan with other governments. Further offences entailing similar punishment are insults to the dignity of the Imperial family, attacks on existing institutions, and breaches of public peace and morality. Should the suppression of a single number be deemed inadequate, the case must be carried before the courts of law, and the incriminated journal suspended for seven days pending the decision. The courts may order its total suppression and the confiscation of the plant used. Furthermore, fines ranging from \$20 to \$300 and imprisonment for terms varying from one month to two years are provided for.

Even the present state of things will appear stringent enough to home readers. But let us be just. There is one consideration which must in fairness be advanced on the other side. It is this: interference with liberty of speech and printing probably galls a Japanese much less than it would those to whom such liberty is part of their native air. These restrictive measures are not, historically speaking, retrograde measures, that is, they do not come after better things in the past. Under the old feudal régime, not only did liberty of speech not exist in fact: the right to some measure of it was not so much as recognised in theory, nor would the men who made the revolution of 1868 have dallied with the idea for a moment in their then frame of mind. They would have shuddered at it as sacrilege. The idea has entered Japan more recently, in the wake of English and American text-books for schools and of Anglo-Saxon ideas generally.

Imprisonment for press offences had hitherto been so common that most papers employed what was called "a prison editor," that is, a man who, though nominally editor-in-chief, had little or nothing to do but to go to prison when the paper got into trouble, the real editor, meanwhile, remaining an uncrowned king, who figured on the books simply as a contributor. Nor is the system yet altogether extinct. But much practice has made ready-writers. Recourse to allegory, *double entente*, and other ingenious devices for conveying more than meets the ear generally suffices to keep Japanese journalists on the safe side of the law. Taking one thing with another, it seems surprising that any man of ability should be tempted to enter the journalistic profession in Japan. The highest remuneration given barely exceeds £100 a year, but only some half-dozen individuals in the empire succeed in climbing to that giddy height. From £30 to £50 a year is the usual pay.

The foreign press at the "Treaty Ports" is almost entirely in English hands. The newspapers there published are rendered

more interesting than the majority of colonial journals by the constant and striking changes in Japanese politics and social life that have to be chronicled. Think what a paradise for the journalist must a country be where the administrative organisation has been re-cast a dozen times in thirty years, and everything else revolves in similar kaleidoscopic fashion! But their heyday is over. In less than two years, if the new treaties take their course, they will have come within the clutches of Japanese law. The Japanese newspaper men, though crying out for more liberty themselves, have been chuckling at the prospect of seeing their foreign brethren become their companions in misfortune. This is but human nature:—*Nous avons tous assez de force pour supporter les maux d'autrui.*" In fact, it is a moot point whether foreigners will be permitted to publish newspapers at all.

**Nō.** See THEATRE.

**Nobility.** The Japanese nobility may be called very old or very new, according to the way one looks at it. In its present form it dates from the 7th July, 1884, when the Chinese titles of *kō*, *kō*\*, *haku*, *shi*, and *dan*, corresponding respectively to our duke (or prince), marquis, count, viscount, and baron, were bestowed by Imperial edict on a number of distinguished persons. But there had been an aristocracy before. Properly speaking, there had been two—the *Kuge* who were descended from the younger sons of ancient Mikados, and the *Daimyōs* who were the feudal lords lifted to title and wealth by the sword and by the favour of the Shōguns. When feudalism fell, the *Daimyōs* lost their territorial titles, and were amalgamated with the *Kuge* under the designation of *Kwazoku*, or "flowery families," which is still the current name for noblemen generally, irrespective of what their particular grade may be.

---

\* The two *kō*'s, though chancing to sound alike, are different words written with different Chinese characters. The first is 公 (Chinese *kung*), the second is 侯 (Chinese *hou*).

These aristocrats by birth formed the nucleus of the new nobility of 1884, among the five grades of which they were distributed according to their historical and other claims to distinction. To them has gradually been added a number of new men, eminent for their talents or for services rendered to the government. The successful termination of the China war naturally witnessed a large batch of new creations. The members of the nobility receive pensions from the civil list. They are also placed under special restrictions. For instance, they may not marry without official permission. On the other hand, the new Constitution grants to a certain number of them the privilege of sitting in the upper house of the Imperial Diet.

**Numerical Categories.** Number has long exercised a peculiar fascination over the Far-Eastern mind. European languages, no doubt, have such expressions as "the Four Cardinal Virtues" and "the Seven Deadly Sins;" but it is no part of our mental disposition to divide up and parcel out almost all things visible and invisible into numerical categories fixed by unchanging custom, as is the case among the nations from India eastward. The Chinese speak of their "Three Religions," of "the Three Forms of Obedience," "the Four Classics," "the Five Duties," "the Eight Diagrams," "the Four-and-Twenty Paragons of Filial Piety," whole pages of their books of reference being devoted to lists of expressions of this kind. The Japanese have followed suit. They have adopted most of the Chinese numerical categories, and have invented new ones of their own. Here are ten of the commonest (ten being the Japanese dozen) chosen from among many scores :—

**THE THREE VIEWS (三景)**, namely, Matsushima near Sendai in the North, Miyajima in the Inland Sea, and Ama-no-Hashidate on the Sea of Japan. These are considered the three most beautiful places in the empire.

THE THREE CAPITALS AND FIVE OPEN PORTS (三府五港) The former are Tōkyō, Kyōto, and Ōsaka ; the latter are Yokohama, Kōbe, Nagasaki, Niigata, and Hakodate.

THE FIVE FESTIVALS (五節句). They are the 7th January, the 3rd March, the 5th May, the 7th July, and the 9th September. (See article on FESTIVALS.)

“THE SEVEN HERBS OF AUTUMN” (秋の七草), sung by the Japanese poets from very early times :—

*Hagi ga hana,*  
*Obana, Kuzu-hana,*  
*Nadeshiko no*  
*Hana, ominaeshi,*  
*Mata Fuji-bakama,*  
*Asa-gao no hana.\**

The *hagi* is the lespedeza. The *obana* is identified with the flowering eulalia (*susuki*), a beautiful tall grass which sways in the wind and seems to beckon to the wanderer over pathless moors. The *kuzu* is the pueraria, which bears masses of purple blossoms. The *nadeshiko* is the wild pink ; the *ominaeshi*, a tiny yellow flower, the patrinia. The *fuji-bakama*, with small pink and white flowers, is the eupatorium. The *asa-gao* in modern usage, is the convolvulus ; but this is said to be an imported plant, and the *asa-gao* of early days was probably either the *platycodon grandiflorum* or else an *althea*.

(There are also SEVEN HERBS OF SPRING (春の七草) ; but these are of a more homely nature—parsley, chickweed, etc.—and are made into a sort of thick soup, which is eaten on the seventh day of the first moon with a view to warding off all diseases during the coming year.)

“THE EIGHT VIEWS” (八景). Following an old Chinese precedent, almost every picturesque neighbourhood in Japan has its eight views. The best-known are “the Eight Views of Lake Ōmi” (*Ōmi Hakkei*), which are enumerated as follows :

---

\* This list in verse of the flowers in question is by Yamagami-no-Okura, a poet of the first half of the eighth century.

—the autumn moon seen from Ishiyama, the evening snow on Hirayama, the sunset at Seta, the evening bell of Midera, the boats sailing back from Yabase, the bright sky with a breeze at Awazu, ruin by night at Karasaki, and the wild geese alighting at Katata. Pretty and thoroughly Oriental ideas—are they not?

“THE EIGHT GREAT ISLANDS” (大八州), namely, the eight largest islands of the Japanese archipelago, hence in poetry Japan itself.

“THE ONE-AND-TWENTY GREAT ANTHOLOGIES” (二十一代集). These are the standard collections of Japanese classical poetry, brought together by Imperial command during the middle ages.

“THE THREE-AND-THIRTY PLACES” (三十三所) sacred to Kwannon, the Goddess of Mercy.

“THE SIX-AND-THIRTY POETICAL GENIUSES” (三十六歌仙). A full list of their names is given in Anderson's *Catalogue of Japanese and Chinese Paintings*, p. 145.

“THE FIFTY-THREE STAGES” (五十三次) on the Tōkaidō. Though the railway has done away with the old Tōkaidō journey by road, these fifty-three stages will always remain familiar to lovers of Japanese painting in the colour-prints of Hokusai, Hiroshige, and other old-time artists.

**Painting.** See ART.

**Paper.** The Japanese use paper for a score of purposes to which we in the West have never thought of putting it, one reason being that their process of manufacture leaves uncut the long fibres of the bark from which the paper is made, and consequently renders it much tougher than ours. Fans, screens, and lanterns, sometimes even clothes, are made of paper. A sheet of nice, soft paper does duty for a pocket-handkerchief. Paper replaces glass windows, and even to a certain extent the walls which with us separate room from room. Japanese housemaids do their dusting with little brooms

made of strips of paper; and dumps of soft paper serve, instead of lint, to arrest bleeding. Oil-paper is used for making umbrellas, rain-coats, tobacco-pouches, and air-cushions, as well as for protecting parcels from the wet in a manner of which no European paper is capable. Paper torn into strips and twisted takes the place of string in a hundred small domestic uses. We have even seen the traces of a harness mended with it, though we are bound to say that the result, with a restive horse, was not altogether satisfactory. Then, too, there is the so-called leather paper, which is used for boxes and more recently for dados and hangings, and the crape paper now familiar abroad as a material for doilies and illustrated books. Japanese writing-paper, properly so called, lends itself admirably to the native brush, but not to our pointed pens, which stick and splutter in its porous fibre. But a factory at Tōkyō now turns out large quantities of note-paper sufficiently sized and glazed for European use, and remarkable for its untearable quality. Correspondents should, however, abstain from committing to this medium any communication delicate in its nature and liable to be pried into by indiscreet eyes; for the envelopes can be opened with perfect ease, and shut again without any evidence remaining of their having been tampered with. Other machine-made paper similar to that of Europe is also now manufactured for the printing of books and newspapers. This has the advantage of being able to receive an impression on both sides, whereas Japanese paper, owing to its porosity, admits of being printed on one side only.

Several plants and trees contribute their bark to the manufacture of Japanese paper. The paper mulberry (*Broussonetia papyrifera*) is the most important of these; but the one most easily recognised by the unlearned is the *Edgeworthia papyrifera*, which has the peculiarity that its branches always divide into three at every articulation, whence the Japanese name of *mitsu-mata*, or “the three forks.”

**Book recommended.** Rein's *Industries of Japan*, p. 389 *et seq.* The description is full and elaborate.

**Parkes.** Born at Birchill's Hall, near Walsall, Staffordshire, in 1828, Sir Harry Parkes was left an orphan at the age of five, and came out to Canton, when still a lad, to be under the charge of his kinsman, the Rev. Charles Gutzlaff, a missionary and consular interpreter well-known for his writings on Chinese subjects. Parkes thus acquired at an early age that intimate knowledge of the Chinese language and of the Oriental character, which helped to make of him England's most trusty and able servant in the Far-East for a period of forty-three years, that is, until his death as British Minister to the Court of Peking, in 1885. Beginning as what would now be termed a student interpreter on the staff of Sir Henry Pottinger during the first China War of 1842, he occupied in turn most of the Chinese consular posts, notably that of Canton, where he was appointed Commissioner during the occupation of the city by the British troops. He was also instrumental in negotiating a treaty with Siam. But the most striking episode of his life was his capture by the Chinese during the war of 1860, when, together with a few companions, he was sent by Lord Elgin under a flag of truce to sign a convention of peace with Prince Tsai, the Chinese Emperor's nephew, but was treacherously seized, cast into a dungeon, and put to the torture. Most of the party fell victims to Chinese barbarity; but Sir Harry's unflinching resolution triumphed equally over torture and over diplomatic wiles, and he was eventually set free. In 1865 he was appointed Minister Plenipotentiary and Envoy Extraordinary to the Court of Yedo, which post he continued to hold till 1883, when he was promoted to Peking. His career in Japan coincided with the most stirring years of modern Japanese history. He even helped to mould that history. When, at the beginning of the civil war of 1868, all his diplomatic colleagues were inclined to support the Shōgun, Sir Harry, better informed than they as to the

historical rights of the Mikado and the growing national feeling in favour of supporting those rights, threw the whole weight of British influence into the loyal side against the rebels.

Sir Harry was always a staunch supporter of his country's commercial interests, and a believer in the "gunboat policy" of his master, Lord Palmerston. His outspoken threats earned for him the dread and dislike of the Japanese during his sojourn in Japan. But no sooner had he quitted Tōkyō, than they began to acknowledge that his high-handed policy had been founded in reason. The respect felt for his talents was pithily expressed by a high Japanese official, who said to a friend of the present writer: "Sir Harry Parkes was the only foreigner in Japan whom we could not twist round our little finger." But courage, talent, and patriotism were not Parkes's only titles to lasting fame. We like him better still as a practical philanthropist labouring for the good, not merely of his own people, but of aliens. He it was who persuaded the Japanese to adopt vaccination, with the result that whereas the percentage of pox-pitted persons was enormous only a quarter of a century ago, such disfigurement is now scarcely more common than at home. Lock-hospitals were another of his creations, as was also the elaborate lighthouse system which has so greatly lessened the chance of shipwreck on this dangerous coast. We cull but two or three items out of a score,—enough perhaps, though, to indicate the difference between this truly great man and the scurvy pack who used to yelp at his heels.

**Book recommended.** *The Life of Sir Harry Parkes*, by S. Lane-Poole and F. V. Dickins.

**Perry (Commodore).** Matthew Calbraith Perry, Commodore in the United States Navy, was born at Newport, Rhode Island, in the year 1794, and died at New York in 1858. In the naval circles of his day, Perry's name was well-known as that of an upright and energetic officer; but his title to lasting fame rests on his having been the man who opened Japan to

the world. Various attempts, American and others, had been previously made in order to attain an end so desirable on commercial grounds, so necessary for the protection of shipwrecked mariners. Liberalism, too, was then in the air. Unrestricted international intercourse was at that time regarded by all Christian nations as an indisputable right, a sacred duty. Americans could with some good grace, or at least without breach of logic, insist on the door of Eastern Asia being flung open to them; for they had not yet begun to barricade themselves behind a Chinese wall of exclusiveness.

In July, 1853, Commodore Perry's fleet anchored off Uraga, a port at the entrance of Yedo Bay. Setting aside all the obstacles which Japanese astuteness sought to place in his way, Perry delivered to the representatives of the Shōgun the letter of President Fillimore demanding the establishment of international relations. Then he steamed away to Luchu and China. Next spring he returned for an answer. The answer took the shape of Japan's first foreign treaty, which was signed at Kanagawa on the 31st March, 1854. By this treaty the ports of Shimoda and Hakodate were opened to American trade, and good treatment promised to shipwrecked American mariners. Such were the first-fruits of the triumph over Japan's stubborn refusal to recognise the existence of the outside world. Treaties with the other nations of Christendom, and a revolution which, after plunging Japan into confusion and bloodshed, has regenerated on Western lines all her institutions, ideas, and aims—this, which it takes so few words to say, but which implies so much, is the result of what Perry was instrumental in doing. Many things precious to the lover of art and antiquity perished in the process. For Old Japan was like an oyster:—to open it was to kill it.

Perry being thus a hero, fancy and myth have already begun to gather round his name. Patriotic writers have discoursed on "the moral grandeur of his peaceful triumph," and have

even gone so far as to try to get people to believe that the Japanese are proud of having been made to knuckle under to him. Perry's was a peaceful triumph only in a catachrestical sense, analogous to that of Napoleon's maxim that "Providence is on the side of the big battalions." To speak plainly, Perry triumphed by frightening the weak, ignorant, utterly unprepared, and insufficiently armed Japanese out of their senses. If he did not use his cannon, it was only because his preparations for using them and his threats of using them were too evidently genuine to be safely disregarded by those who lay at his mercy. His own "Narrative" is explicit on this point. Nor shall we, at least, blame him. Perry was a naval officer, and he acted with the vigour of a naval officer, carrying out the orders of his superiors, and at the same time bringing to bear on the situation the tact of a born diplomatist. The event shows that the "gunboat policy," so often decried by amiable but misinformed persons, is really and truly a policy well-suited to certain times and places—to circumstances in which any other method of action is liable to be interpreted as a sign of weakness. Might is right in many cases. The gunboat policy is the only one which is understood by a semi-civilised Oriental power, such as Japan then was and remained for several years after. We therefore give Perry all honour. As for the sentimental gloss which has been laid over his actions, few will probably be found to pay any heed to it.

**Books recommended.** *Narrative of the Expedition of an American Squadron under Commodore Perry*, by Perry and Hawks, Vol. I.—*Matthew Calbraith Perry*, by Rev. W. E. Griffis.

**Philosophy.** The Japanese have never had a philosophy of their own. Formerly they bowed down before the shrine of Confucius. They now bow down before the shrine of Herbert Spencer.

**Pidjin-Japanese.** In China, where the native language is very difficult to pick up, and the natives themselves have a

acided talent for learning foreign tongues, the speech of the most numerous body of foreigners—the English—has come to be the medium of intercourse. It is not pure English, but English in that modified form known as “Pidjin-English.”\* In Japan, where the conditions are reversed, we have “Pidjin-Japanese” as the *patois* in which new-comers soon learn to make known their wants to coolies and tea-house girls, and which serves even as the vehicle for grave commercial transactions at the open ports. A Yokohama resident of old days, Mr. Hoffman Atkinson, made up a most entertaining little book on this subject, entitling it *Exercises in the Yokohama Dialect*; but its humour cannot be fully appreciated except by those to whom real Japanese is familiar.

In the dialect under consideration, a “lawyer” is called *consul-bobbery-shito*, a “dentist” is *ha-daikusan* (literally “tooth carpenter”), a lighthouse” is *fune-haiken-sarampan-nai-osoku*, a “marine insurance surveyor” is *sarampan-fune-haiken-danna-san*, and so on. We wish it were possible for us to give the Pidjin-English version of the Lord’s prayer, beginning *Otottsan nikai arimas*; but reverence forbids.

**Pilgrimages.** The reputation of most Japanese shrines is bounded by a somewhat narrow horizon. The Yedo folk—the Eastern Japanese—make pilgrimages to Narita, and up Fuji and Ōyama. Devout natives of the central provinces round Kyōto repair to the great monastery of Kōya-san, or perform what is termed the “tour of the holy places of Yamato” (*Yamato-meguri*), including such celebrated temples as Miwa, Hase, and Tōnomine; and they also constitute the majority of the pilgrims to the shrine of the Sun-Goddess in Ise. The religious centre of Shikoku is a place called Kompira or Kotohira; in the North that rank belongs to the sacred island of Kinkwazan, while the Inland Sea has another sacred and most lovely island—Miyaji-

---

\* “Pidjin” is believed to be a corruption of the word “business.”

ma—where none are ever allowed either to be born or to be buried, and where the tame deer, protected by a gentle piety, come and feed out of the stranger's hand. But some of the greatest shrines have branches in other provinces. Kōmpira has a branch in most Japanese cities; the great Kyōto temple to the Fox-Goddess Inari has a branch in almost every village. Again there are shrines whose very nature is multiple. Such, for instance, are the Thirty-Three Holy Places of Kwannon, the Goddess of Mercy.

Pilgrimages are generally of a social nature. There exist innumerable pious associations called *kō* or *kōjū*, whose members contribute each a cent a month, and then, when the proper time of year comes round, a certain number of persons are chosen by lot to represent the rest at the shrine of their devotion, all expenses being defrayed out of the common fund. When these representatives form a considerable band, one of them, who has made the pilgrimage before, acts as leader and cicerone, recounting to his gaping audience the legend of each minor shrine that is passed on the way, and otherwise assisting and controlling the brethren. The inns to be put up at on the road are mostly fixed by custom, a flag or wooden board inscribed with the name of the pilgrim association being hung up over the entrance. Inns are proud to display many such authentic signs of constant patronage, and visitors to Japan will often notice establishments whose whole front is thus adorned. As a general rule, the pilgrims wear no special garb; but those bound for Fuji, Ontake, or other high mountains, may be distinguished by their white clothes and very broad and sloping straw hats. While making the ascent, they often ring a bell and chant an invocation which, being interpreted, signifies, "May our six senses be pure, and the weather on the honourable mountain be fair." \*

---

\* *Rokkon Shōjō O Yama Kaisei*. The six senses, according to the Buddhists, are the eyes, ears, nose, tongue, body, and heart. The pilgrims repeat the invocation, for the most part, without understanding it, as most of the words are Chinese.

The Japanese, as has been often remarked, take their religion lightly. Ise and other favourite goals of piety are equally noted for the distractions which they provide of an evening. Nor is much enquiry made into the doctrines held at any special shrine. Kōmpira was Buddhist and is now Shintō, having been made so by order of government during the present reign. But the pilgrims flock there all the same, the sanctity of the name of the shrine overbalancing any lapses in the theology of the priests. Nor need this be matter for wonderment, seeing that the pilgrim ranks are recruited almost exclusively from the peasant and artisan classes, whose members scarcely realise that Buddhism and Shintō are two separate cults, and are prepared to pay equal respect to all the superhuman powers that be. When tradesmen of any standing join a pilgrim association, they mostly do so in order to extend their business connection and to see new places cheaply and sociably.

People who remember the "good old times," assert that pilgrimages are on the wane. Probably this is true. The influence of religion has been weakened by the infiltration of Western ideas of "progress" and material civilisation. Then, too, taxation weighs far more heavily than of yore, so that there is less money to spend on non-essentials. Still many thousands of persons, mostly pilgrims, annually ascend Fuji; and the concourse of worshippers at the temple of Ikegami near Tōkyō is so great that on the 12th October, 1897 (that being the annual festival), over forty-seven thousand persons passed through the wicket at the little country railway station where the daily average is only some five hundred. Many, doubtless, were mere holiday-makers, and the scene in the grounds was that of a great holiday-making. The happy crowds trot off to amuse themselves, and just do a little bit of praying incidentally,—give a tap at the gong, and fling a copper into the box,—so as to be sure of being on the right side. They are

ten thousand miles away from Benares, and from Mecca, and from the Scotch Kirk.

The holy objects which Japanese pilgrims go out for to see and to bow down before, belong exactly to the same category as the holy objects of Christian devotion, modified only by local colouring. Minute fragments of the cremated body of a Buddha (these are called *shari*), foot-prints of a Buddha, images and pictures by famous ancient saints, such as the Abbot Kōbō Daishi and Prince Shōtoku Taishi, whose activity in this direction was phenomenal if legend can at all be trusted—holy swords, holy garments, wells that never run dry, statues so life-like that when struck by an impious hand, blood has been known to flow from the wound,—these things and things like these are what will be brought to the notice of the traveller curious to pry into the arcana of Japanese piety.

**Book recommended.** *Occult Japan*, by Percival Lowell.

**Pipes.** The diminutive pipes of modern Japan are but one among the innumerable instances of the tendency of Japanese taste towards small things. To judge from the old pictures that have been preserved, the first Japanese pipes must have been as large as walking-sticks, whereas those now used give a man but three whiffs. After the third whiff, the wee pellet of ignited tobacco becomes a fiery ball, loose, and ready to leap from the pipe at a breath; and wherever it falls, it pierces holes like a red-hot shot. But the expert Japanese smoker rarely thus disgraces himself. He at once empties the contents of the mouthpiece into a section of bamboo (*hai-fuki*), which is kept for the purpose, somewhat after the fashion of a spittoon. Not so the foreigner ambitious of japonising himself. *He* begins his new smoking career by burning small round holes in everything near him—the mats, the cushions, and especially his own clothes.

The pipe may be made either of metal only, or of bamboo with metal at either end,—the bowl and the mouthpiece. The

metal commonly employed is brass, but silver is more fashionable; and as massive silver would be inconveniently heavy, the plan followed is to engrave and inlay it elaborately, thereby both lightening the article and beautifying it. A really fine pipe may cost as much as thirty dollars, and will be handed down as an heirloom. A friend of the present writer has collected over a hundred sorts, ranging from such artistic triumphs down to the three cent pipe of the navy or the navy's wife,—for in smoking, if in nothing else, Japanese manners sanction complete equality between the sexes.

Around the pipe as an evolutionary centre, a whole intricate and elegant little world of smoking furniture and smoking etiquette has come into existence. There is the *tabako-ire*, or tobacco-pouch—as far removed in its dainty beauty from the cheap gutta-percha atrocities of Europe as a butterfly is from a blunderbuss—the *netsuke*, or carved button, used to attach the pouch to the owner's girdle, and above all the *tabako-bon*, or smoking-box, which contains a brazier and other implements. In aristocratic houses the smoking-box is sometimes lacquered, and the brazier is of plated or solid silver. A specially light and graceful kind is that invented for use in theatres, and arranged so as to be easily carried in the hand. The smoker before whom, on a winter's day, is placed—let us say—a handsome bronze brazier to warm his hands and light his pipe at, must not empty the pipe into it by knocking the metal head upon the rim. He must insert the leather flap of his tobacco-pouch between the pipe head and the brazier, so as to prevent the tapping of the former from making a dent in the bronze. The introduction of European costume among the upper classes has caused certain modifications in the smoking paraphernalia. The tobacco-pouch has been reshaped so as to accommodate itself to a breast or side-pocket, and the little pipe itself has been shortened so as to be enclosed in the pouch, much as a pencil is enclosed in a pocket-book. The old plan was for the pipe to be carried at the

girdle in a case of its own. These innovations have happily not, as in so many other cases, been attended by loss of beauty. On the contrary, charmingly designed articles have sprung into existence, and are all the more interesting for their novelty.

To clean a Japanese pipe is an art in itself. One plan is to heat the pipe head in the charcoal of the brazier, and then blow out the refuse; but this method corrodes the metal of a fine pipe. Such must be cleaned by means of a twist (*koyori*) of fine, tough paper, which is passed up the stem and pulled out through the head, the operation being repeated until all the nicotine has been removed. An industry worth mentioning in this connection is that of the workmen who replace worn-out bamboo pipe-stems by new ones of any desired length. The stems are now often beautifully speckled in imitation of tortoise-shell, porcupine quills, and other things.

Must it be revealed, in conclusion, that in vulgar circles the pipe, besides its legitimate use, occasionally serves as a domestic rod? The child, or possibly the daughter-in-law, who has given cause for anger to that redoubtable empress, the *Obāsan*, or "Granny," before whom the whole household trembles, may receive a severe blow from the metal-tipped pipe, or even a whole volley of blows, after which the old lady resumes her smoke. (See also Article on TOBACCO).

**Poetry.** Japanese poetry is more interesting than Japanese prose, for the reason that it is more original, less permeated by adventitious Chinese elements. Chinese poetry has rhyme, parallelism, and an intricate arrangement of words according to their "tones." Of all this, the Japanese know nothing. From the dawn of history to the present day, Japanese verse has simply consisted of alternate lines of five and seven syllables, with generally an additional line of seven syllables at the end. Occasionally a Japanese poem will be half a page or a page in length. But the overwhelming majority are tiny odes of thirty-one syllables, the lines being arranged thus: 5,7,5,7,7.

The first three lines of such an ode, or *uta*, is called the *kami no ku*, or "upper hemistich;" the second is the *shimo no ku*, or "lower hemistich." A slight pause is always made between the two in reciting. Thus:

- |     |                           |
|-----|---------------------------|
| (5) | <i>Hototogisu</i>         |
| (7) | <i>Nakitsuru kata wo</i>  |
| (5) | <i>Nagamureba—</i>        |
| (7) | <i>Tada ari-are no</i>    |
| (7) | <i>Tsuki zo nokoreru*</i> |

that is, literally rendered,

"When I gaze towards the place where the cuckoo has been singing—nought remains but the moon in the early dawn."

The favourite subjects of the Japanese muse are the flowers, the birds, the snow, the moon, the falling leaves in autumn, the mists on the mountains,—in fact, the outward aspect of nature,—love of course, and the shortness of human life. Many of our Western commonplaces are conspicuously absent: no Japanese poet has expatiated on the beauties of sunset or starlight, or has penned sonnets to his mistress's eyebrows, or even so much as alluded to her eyes; much less would he be so improper as to hint at kissing her. Japanese poetry has commonplaces of its own, however; and rules from which there is no appeal prescribe the manner in which each subject is to be treated. One rule of general application places a veto on the employment of Chinese words,—a circumstance which narrowly limits the range of thought and expression, seeing that more than half the words in the language, and nearly all those denoting abstractions and delicate shades of meaning, are of Chinese origin.

---

\* Some critic, very learned in everything but Japanese, will perhaps say that the first and fifth, and the second and fourth lines of this little poem do rhyme together, after all. We would remind him that rhyme is an intentional likeness of sounds, not an accidental likeness, and that such accidental concurrences are not to be prevented in a language which, like Japanese, has but six finals, namely, the five vowels, *a, e, i, o, u*, and the consonant *n*. No rhyme is perceived in any such cases by the Japanese themselves, nor is it easy at first to get them to appreciate our European rhymes, or even to hear them.

Many Japanese odes are mere exclamations—words outlining a picture for the imagination, not making any assertion for the logical intellect. Take, for instance, the following, written by an anonymous poet a thousand years ago :

*Shira-kumo ni*  
*Hane uchi-kawashi*  
*Tobu kari no—*  
*Kazu sae myuru*  
*Aki no yo no tsuki!*

that is,

“The moon on an autumn night, making visible the very number of the wild-geese that fly past with wings intercrossed in the white clouds”—Such a manner of expression may seem strange at first, but its charm grows upon one.

With the doubtful exception of the *Nō*, or classical dramas, all the genuine poetry of Japan is lyrical. The Japanese have also burlesque or comic stanzas. Even their serious poetry admits of plays upon words, and of another ornament named “pillow-words” (*makura-kotoba*). These are words devoid of meaning themselves, but serving as props for other significant words to rest on. Acrostics, anagrams, and palindromes are well-known to the Japanese, all such conceits having come in early in the middle ages. To the end of the ninth century may be traced the institution of the poetical tournaments known as *uta-awase*, which originated in China about A. D. 760. A favourite game at these tournaments, called *renga*, wherein one person composes the second hemistich of a verse and another person has to provide it with a first hemistich, seems to date from the eleventh century. The *hokku*, an ultra-lilliputian kind of poem having but seventeen syllables (5, 7, 5), is of more modern origin. The most admired specimens are from the pen of Bashō, who flourished at the end of the 17th century. Here is a very famous one :

*Furu-ike ya*  
*Kawazu tobi-komu*  
*Mizu no oto!*

In English,

"The old pond—aye! and the sound of the frogs jumping into the water."—Millions of these tiny dashes of colour or humour have been considered worthy of preservation

The twin stars of early Japanese poetry are Hitomaro and Akahito, both of whom loved and sang during the opening years of the eighth century. Perhaps the most illustrious next to them—lustrous not only in verse, but in prose—is Tsurayuki, a great noble of about the year 930, after which time the decline of Japanese poetry set in. There are many other well-known poets, and also poetesses. But the Japanese consider poetry more as the production of an epoch than of an individual. They do not, as a rule, publish separately the works of any single author, as we publish Chaucer, Spenser, and the rest. They publish anthologies of all the poetical works of an era. The *Manyōshū*, or "Collection of a Myriad Leaves," was the first of these anthologies, and is therefore the most highly prized. It was compiled in the eighth century. The moderns have devoted a whole mountain of commentary to the elucidation of its obscurities. The *Kokinshū*, or "Songs Ancient and Modern," collected by Tsurayuki and including many of his own compositions, dates from the tenth century, a period whose style has remained the model which every later poet has striven to imitate. Other collections—all made by Imperial order—followed in the eleventh, twelfth, thirteenth, fourteenth, and fifteenth centuries. These, together with the "Songs Ancient and Modern," are known under the general name of the "Anthologies of the One-and-Twenty Reigns" (*Ni-jū-ichi Dai-shū*). A much shorter collection, the *Hyaku-nin Is-shu*, or "Hundred Odes by a Hundred Poets," brought together by Teika Kyō, a nobleman of the thirteenth century, has long enjoyed exceptional favour with the public at large,—so much so that every one having a tincture of education knows it by heart; but the native critics justly refuse to endorse this superficial popular verdict.

Previous to the changes wrought by the revolution of 1868, it was considered one of the essential accomplishments of a Japanese gentleman to be able to write verses. This was not so difficult as might be imagined; for nothing was less honoured than originality. On the contrary, the old ideas had to be expressed in the old words, over and over again, plagiarism being accounted no crime, but rather a proof of wide reading and a retentive memory. Japanese gentlemen also composed Chinese verses, much as our schoolboys compose Latin verses. A good deal of all this still goes on. Numbers of persons, both men and women, make their living as teachers of the poetic art. Meetings are held, diplomas conferred, and time spent in elegant exercises, around which, as is the Japanese wont, a whole forest of technical terms has grown up. There lies before us the programme for 1898 of one of these teachers, an accomplished lady, whose poetry days are the 21st of each month. January, July, August, and December are vacation time. The themes set for the other months, printed on neat little slips of paper and circulated among her *clientèle*, are as follows, and may serve as specimens of a score of others:—

- |                   |  |
|-------------------|--|
| <i>February.</i>  | The Willow-tree in Early Spring. The Cock at Dawn.                     |
| <i>March.</i>     | Morning Mist. Wishing a Friend the Pine-tree's Thousand Years of Life. |
| <i>April.</i>     | Cherry-blossoms at Eve. Lovers Vows Broken through Fear of Others.     |
| <i>May.</i>       | The Cuckoo at Night. Giō and Gijō.*                                    |
| <i>June.</i>      | A Fan in My Lady's Chamber. Distant View of a Fishing Boat.            |
| <i>September.</i> | Gazing all Night at the Moon. The Maiden of Ōiso.†                     |
| <i>October.</i>   | The Deer on the Mountains. Occasional Meetings with the Beloved.       |
| <i>November.</i>  | Hoar-frost on the Bamboos. Picnic Frolics.                             |

---

\* Two great beauties of mediæval times, mistresses of the all-powerful Kiyomori. They became nuns when he neglected them for other charms.

† The celebrated Tora Gozen, mistress of one of the Soga Brethren, heroes of the twelfth century.

It will be noticed that the themes are in most cases appropriate to the month to which they are allotted—a consideration made clearer still by reference to Japanese literary conventions. For instance, an uncultured European may suppose that the moon belongs equally to every season. He is wrong : the moon is the special property of autumn, and the still more private and particular property of September. You ask, why ? That only shows your want of education. Educated persons accept all such literary dicta without question. European notions may be all very well in such matters as railways, and drainage, and steam boilers, and things of that sort ; but when it comes to poetry, the Japanese cry halt, for that is sacred ground. There are, no doubt, a few men—Professors Toyama and Inouye, for instance—who have endeavoured to shake off these fetters, and lead Japanese poetry into new paths ; but such innovators have scant following.—To return to orthodoxy. The Palace itself, conservative in most things non-political, offers to the nation an example of fidelity to the national traditions in matters relating to poetry. The Imperial family has its teachers of the art. Once a year, too, in January, a theme is set, on which the Emperor, Empress, and other high personages compose each a thirty-one syllable ode, and the whole nation is invited to compete, with the result that many thousands of verses are sent in, written on thick paper of a certain size prescribed by custom. The Court being in mourning, no competition took place this year ; but in January, 1897, the theme was “Pine-trees Reflected in the Water.” In January, 1896, it was “Congratulations Compared to a Mountain.” In other years it was “The Longevity of the Green Bamboo,” “Pine-trees Buried in the Snow,” and so on, the general custom being to insinuate some delicate compliment to the reigning house, even when the theme may seem to make that a feat involving some difficult twisting.

All that has been written above refers to the poetry of the educated. As for the common people, they have songs of their

own, which conform as far as possible to classical models, but are much mixed with colloquialisms, and are accordingly despised by all well-bred persons. The ditties sung by singing-girls to the twanging of the guitar belong to this class.

Lange.—*Dichtengrüsse aus dem Osten*, and others, by K. Florenz.—Also Aston's *Grammar of the Japanese Written Language*, p. 197, *et seq.*, for details concerning prosody, and Chamberlain's *Handbook of Colloquial Japanese* for remarks on the more modern, popular poetry of Japan. Some specimens of popular ballads, etc., will be found in Lafcadio Hearn's *Kokoro*.—For the *Nô* or Lyric Dramas, see Article "THEATRE" of the present work.

**Polo.** The game of polo, which is believed by the best European authorities to have originated in Persia, was introduced into Japan from China in the sixth or seventh century after Christ. It is known here by the Chinese name of *da-kyū*, literally "striking balls." A Japanese poet of the earlier part of the eighth century mentions polo as being then a favourite pastime of the Court. It still remains essentially aristocratic, as a game played on horseback and entailing considerable apparatus and expense can scarcely fail to do.

The Japanese polo club, or rather racket, weighs a trifle under 2 ounces. It has a tapering bamboo handle some 3 feet 6 inches in length, and of about  $\frac{1}{2}$  inch diameter at the thick end. To the thin end is spliced, with silk or cotton cord, a flat piece of split bamboo  $\frac{1}{2}$  inch in width, bent round so as almost to form a frame, and kept in position by a piece of double cord fastened from its extremity to the handle just above the splicing. Across this frame a light net of silk or cotton cord is stretched sufficiently loosely to avoid elasticity, but not loosely enough to present any "catch" in slinging the ball. The interior of this scoop or net measures 4 inches by  $2\frac{1}{2}$ . The balls are of four kinds—plain white, plain red, banded red, and banded white. They measure  $1\frac{1}{2}$  inch in diameter, weigh about  $1\frac{1}{4}$  ounce, and are formed of small pebbles wrapped in rice straw or bamboo fibre and coated with several layers of thin paper fastened up with rice paste.

The correct number of players is fourteen—seven a side—but the game is sometimes played with a greater and often with a less number. Each side wears a distinctive badge—white and some colour. The players with white badges play with white balls, those with coloured badges play with red balls.

The court is a rectangular enclosure railed in by a stout bamboo post and rail fence about 4 feet high, except at one end, where a boarded fence or screen about 8 feet high replaces the post and rail. In the centre of this screen is a circular hole about 1 foot 6 inches in diameter, behind which is fixed a netted bag rather longer than an ordinary landing net. This is the goal. \*Eighteen feet from this goal screen, another post and rail about 3 feet 6 inches high are fixed as a barrier right across the enclosure. Three feet nearer the goal, a balk line formed by a bamboo embedded in the earth is fixed parallel to the barrier and goal fence. At the other end (entrance end), another barrier forms a small enclosure for attendants with balls and rackets. Close to this end are openings in the side post and rails, allowing the players ingress and egress. The space thus railed in measures 180 feet from "barrier" to "barrier," 60 feet from side to side.

The players having entered the enclosure on horseback, each provides himself with a ball of similar colour to the badge worn by his side, the ball being carried balanced in the net of the racket. Each side then forms in single file at the entrance end of the enclosure, so that the two files are parallel both to the borders of the enclosure and to one another. The border of the enclosure which each side occupies, is denoted by a flag and string of balls of the colour proper to that side placed right and left of the goal. Each horseman faces goal, but also slightly turns his horse

---

\* This distance is somewhat variable, being occasionally reduced to as little as 15 feet. The diameter of goal is then reduced with the distance from 1 foot 6 inches to 1 foot 2 inches.

inwards, so as to face somewhat towards his corresponding opponent also. Each player then raises his racket, with the ball balanced on the net, to a horizontal position across his chest, breast high—the club being held in the right hand—and thus awaits the word to start. This being given, both sides canter *en masse* to the “goal barrier,” and endeavour to sling their balls through the “goal hole,” at the same time obstructing foes and protecting friends as far as possible. The object of the players, on both sides, during this the first stage of the game, is to score seven balls of their respective colours as soon as possible. Should a player inadvertently put a ball of the opponents’ colour into goal, it scores for them, and against his own side. The duration of each game being limited to half an hour, scoring is of more importance during the first stage than obstructing. Consequently the play is chiefly confined to shooting at goal. If, however, one side gains a long lead at starting, it is usual for the other side to station a “goal keeper” in front of the goal to impede the shooting of the successful side. At the entrance end of the court, behind the barrier, are piles of balls of both colours. It is usual for a player of each side to supply his allies with ammunition, by slinging up balls of their colour towards the goal. For during the first stage of the game the number of balls in play is practically unlimited, those only being out of play which fall outside the enclosure, or remain between the “balk line” and goal screen. It is not good form to sling the opponents’ balls out of the enclosure, but it is so to return them towards the entrance end.

The fragile nature of the rackets necessitates gentle play, and reduces hitting or striking to a minimum. It is not allowable to handle the ball, or to carry it in any other way than in the racket net. The score is kept by means of two strings of seven balls each, of the respective colours of the two sides. These strings of balls are hung outside the screen on either side of goal. When a ball is put into goal, a ball of the same colour is

taken off its string. Thus the number of balls remaining on each string denotes, not the number of balls already scored by each side, but the number which still remains to be scored to complete the tale of seven. The scoring of a ball is further announced by two blows upon a drum for one side, upon a gong for the other.

When one side has scored seven balls, it enters the second and final stage of the game. Drum or gong, as the case may be, loudly announces the fact by repeated strokes. That side's hitherto slanting flag-staff is raised to a vertical position, its scoring string stands empty. A banded ball of its colour is thrown into the enclosure from the entrance barrier by an attendant, and is scrambled for by both sides. This is the only ball of that colour now in play. Should it be forced out of play, it is immediately replaced by a similar banded ball thrown into the enclosure in the same manner, and so on. Should it be slung into goal, the game is over, the side of that colour winning the game. In like manner, should the other side score their seventh ball before the opponents score their banded ball, they too are heralded into the second stage of the game, with flag, gong or drum, and empty scoring string. They too have a banded ball of their colour thrown into court, the only one of that colour then in play, also replaced by a similar ball in the event of its being forced out of play. The two sides are in that case again equal, and whichever side scores its banded ball first wins the game. (Until the unsuccessful side scores its seventh ball, however, it still remains in the first stage of the game, and can play with an unlimited number of balls.) The winning stroke is announced by loud beating of the gong or drum, and by waving of the flag which distinguishes the winning side. The winners ride out of the enclosure in single file, while the losers dismount and follow on foot, leading their horses—a picturesque conclusion to a noble and manly game. Should neither side score its banded ball within a given time

(half an hour usually) from the commencement of play, the game is drawn.

The following minor points are worthy of notice :—

The importance of the banded ball is always denoted by a change in the whole character of the game. "Goal keepers" are stationed near the goal to defend it. Players are told off to endeavour to obtain and keep possession of the opponents' banded ball. Dodging, slinging from a distance, passing, dribbling, and empounding all add an animation and excitement to the last stage of the game which are somewhat wanting in the first.

Picking up the ball is an art easily acquired ; not so the wrist motion necessary to retain the ball in the racket net. This must be the result either of practice or of natural sleight of hand.

The game is sometimes played with three balls instead of seven, either in order to shorten it, or when there is not the full complement of players.

\* \* \* \* \*

Other games played on horseback are the *Samurai Odori*, or Warriors' Dance, which may perhaps be best decibed as a giant quadrille in armour, and the *Inu Ou Mono*, or Dog Chase, a cruel though not exactly bloody sport, the gist of which is shooting at dogs with blunt arrows. Both are now extremely rare.

**Population.** The latest official statistics give the population of Japan at 42,270,620, of whom 21,345,750 men, and 20,924,870 women. These figures refer to the 31st December, 1895. A comparison with those for each year from 1881 ou-wards, when the total was only 36,358,994, shows an average annual increase of slightly over 1.1 per cent.

**Book recommended.** *Résumé Statistique de l'Empire du Japon.*

**Porcelain and Pottery.** At the end of the sixteenth century after Christ, the Korean polity and civilisation were ruthlessly overthrown by Japanese invaders. The Korean art

of porcelain-making then crossed the water. All Japan's chief potteries date from that time, her teachers being Korean captives. What had gone before was but preparatory—such things, we mean, as the coarse clay vessels attributed to the eighth century saint, Gyōgi Bosatsu, the black and chocolate-coloured tea-jars of Seto, which date from the thirteenth century, and Shonzu's imitations of Chinese blue porcelain, which date from the first half of the sixteenth century. These early efforts may greatly interest the antiquary; and the association of some of them with the celebrated "tea ceremonies" (*cha no-yu*) gives them a *succès d'estime* in the eyes of native collectors. But they are not art properly so-called. Japanese ceramic art dates, roughly speaking, from the year 1600. It reached its zenith, also roughly speaking, between the years 1750 and 1830. The "Old Satsuma" crackled ware, of which European collections contain (query: do they?) such numerous specimens, possesses therefore no fabulous antiquity; the only thing often fabulous about it is its genuineness. The real golden age of Satsuma faience was the half century from 1800 to 1850.

The other principal centres of the Japanese ceramic art, as enumerated in Audsley and Bowes' work on the subject, are the province of *Hizen*, noted for the enamelled porcelain made at Arita—the "Old Japan" of European collectors—besides other varieties; *Kaga*, which, after a long and checkered history, is now known chiefly for the Kutani porcelain richly decorated in red and gold; and *Kyōto*, whose Raku faience has long been associated with the "tea ceremonies." Kyōto is also the home of the Awata faience originated by the celebrated artist Ninsei about A.D. 1650, and of other varieties known by the names of Kiyomizu, Gojōzaka, Iwakura-yaki, etc. The potteries of Kyōto are those within most easy reach of the traveller, and a visit to them should on no account be omitted. Then there is  *Owari*, which produces many varieties of porcelain and certain descriptions of faience and stoneware. Though here named last, the

Owari potteries would seem to be the most ancient of all ; and the village of Seto in this province has given its name to pottery and porcelain in general, such objects being familiarly spoken of by the Japanese as *seto-mono*, that is, "Seto things," much as we use the word "china."

Japan boasts many other famous ceramic wares. Such are the various kinds of *Bizen* ware, of which the most original are humorous figures of gods, birds, lions, and other creatures ; the thin, mostly unglazed *Banko* ware, whose manufacturers at the present day display great ingenuity in giving quaint fanciful shapes to tea-pots and other small articles ; the *Awaji* faience, consisting chiefly of small monochromatic pieces with a bright yellow or green glaze ; the *Sōma* pottery, to be recognised by the picture of a running horse ; the egg-shell cups of *Mino* ; and the *Takatori*, *Izumo*, and *Yatsushiro* wares, of which the latter—especially in its more ancient specimens—are very highly prized.

The qualities of sobriety and "distinction," which are so noticeable in the other branches of Japanese art, have not failed to impress themselves on the ceramics of this esthetic land. Some of the early Arita porcelain was, it is true, manufactured to the order of Dutch traders at Nagasaki, and bears the marks of this extraneous influence in the gaudy overcrowding of its decoration. For this fault Wagenaar and other chiefs of the Dutch factory are responsible, not the Japanese whom they employed. A British nation possessed of the necessary funds may dictate as she pleases to a Paris *modiste* ; but the result is not necessarily a perfect index of Parisian taste. The typical Japanese ceramists were no hired workmen, no mere sordid manufacturers, but artists, and not only artists, but clansmen faithful to their feudal chief. By him they were fed ; for him and for the love of their art they worked. Pieces were made for special occasions—for presents, say, from their lord to the Shōgun at Yedo, or for the trousseau of their lord's daughter. Time was no object. There was no public of mediocre taste to cater for.

Nothing was made, as the vulgar phrase is, for the million. The art was perfectly and essentially aristocratic. Hence the distinction of, for instance, the early Satsuma ware, the delicacy of its drawing, the subdued harmony of its colouring. It is a mere piece of amiable optimism to suppose it possible that such a tradition can be kept up in the days which have produced that frightful but aptly descriptive term, "*art manufacture*." The same thing is true, generally speaking, of Japanese art in all its branches. The painter, the lacquerer, the worker in metal, —all had in view the personal requirements of a small and highly cultivated class of nobles. Money-making was never their aim, nor were their minds distracted by the knowledge of the existence of numerous styles besides their own. (See also Article on *ARCHÆOLOGY*).

**Books recommended.** *Japanese Pottery*, by J. L. Bowes.—*Japan and its Art*, by Huish.

**Posts.** When Ieyasu, in A.D. 1603, brought Japan to a state of peace which lasted for two hundred and fifty years, a rude postal system spontaneously sprang up in the shape of private agencies, called *hikyaku-ya*, which undertook, for a low charge, but also at a low rate of speed, to transmit private correspondence from place to place both by land and sea. The official despatches of the Shōgunate were all sent by special government couriers, under the control of postmasters (*ekiteishi*) at the various post-towns. Couriers belonging to the different clans carried the despatches of their respective Daimyōs to and from the seat of government at Yedo.

The first approximation to a modern postal system was that introduced early in 1871, chiefly through the efforts of Mr. H. Maejima, following American models. A government postal service was then established along the Tōkaidō between Tōkyō, Kyōto and Ōsaka, and extended in 1872 to the whole country, with the exception of certain parts of Yezo. The 1 *sen* 6 *rin*, 8 *sen*, and 16 *sen* stamps of those early days have become extremely rare.

Concurrently with the Imperial Japanese post-office, American postal agencies continued to exist at the Treaty Ports until the end of 1873, and French and English agencies until 1879, when Japan was admitted into the International Postal Union, with full management of all her postal affairs. Japanese letter-postage is now the cheapest in the world, because originally based on a silver standard which naturally shared in the universal depreciation of that metal. Inland letters go for 2 *sen*, that is, about a halfpenny, post-cards for half that sum. The postage to all countries included in the Postal Union is 10 *sen* (two-pence half-penny, though originally intended to be equivalent to fivepence). There is an excellent system of postal savings-banks, and money orders are largely availed of. The parcel post has had comparatively little success hitherto. In the last year for which statistics are available, the number of letters carried was 113,425,518, and the total mail matter, 446,384,710.

The dead letter office in Japan has very light work, as it is the national habit for the writer of a letter to put his own name and address on the back of the envelope.

Besides the early stamps mentioned above, those issued in 1895 to commemorate the Emperor's Silver Wedding, and those issued in 1896 to commemorate the China war will have special interest for collectors. Of both these issues only the values 2 *sen* and 5 *sen* exist. The War Commemoration stamps are also noteworthy, because one set of each value bears the image of the late Prince Arisugawa, Commander in Chief, and another set that of Prince Kita-Shirakawa, who died fighting in Formosa. A peculiar feeling of respect has hitherto prevented the Emperor's effigy from being thus used, and some conservative persons objected at the time even to the issue bearing the effigies of the Imperial princes.

**Praying-Wheel.** This instrument of devotion, so popular in Thibetan Buddhism, is comparatively rare in Japan, and is used in a slightly different manner, no prayers being written on

it. Its *raison d'être*, so far as the Japanese are concerned, must be sought in the doctrine of *ingwa*, according to which everything in this life is the outcome of actions performed in a previous state of existence. For example, a man goes blind : this results from some crime committed by him in his last avatar. He repents in this life, and his next life will be a happier one ; or he does not repent, and he will then go from bad to worse in successive re-births. In other words, the doctrine is that of evolution applied to ethics. This perpetual succession of cause and effect resembles the turning of a wheel. So the believer turns the praying-wheel, which thus becomes a symbol of human fate, with an entreaty to the compassionate god Jizo\* to let the misfortune roll by, the pious desire be accomplished, the evil disposition amended as swiftly as possible. Only the Tendai and Shingon sects of Buddhists use the praying-wheel—*rimbō* as they call it—whence its comparative rarity in Japan. Visitors to Tōkyō will find three outside a small shrine dedicated to the god Fudō close to the large temple of Asakusa. They are mounted on low posts not unlike pillar post-boxes.

The wheel which figures so frequently in Buddhist architectural design, is not the praying-wheel, but the so-called *hōrin* (Sanskrit *dharmachakra*), or "Wheel of the Law," a symbol of the doctrine of transmigration. Neither must the praying-wheel be confounded with the "revolving libraries" (*tenrinzō* or *rinzō*), sometimes met with in the grounds of Buddhist temples. These "revolving libraries" mostly contain complete or nearly complete sets of the Buddhist scriptures ; and he who causes the library to revolve, lays up for himself as much merit as if he had read through the entire canon.

**Book recommended.** *The Buddhist Praying-Wheel*, by Wm. Simpson.

---

\* See Introduction to Murray's *Handbook for Japan* (Article "Gods and Goddesses"), for an account of this popular deity.

**Printing.** Printing reached Japan from China in the wake of Buddhism; but it came somewhat later than the other arts. The earliest example of block-printing in Japan dates from A.D. 770, when the Empress Shōtoku caused a million Buddhist charms to be printed on small slips of paper, for distribution among all the temples in the land. Some of these ancient slips are still in existence. The first notice of printed books occurs in the tenth century, and the oldest specimen extant belongs to a date falling somewhere between 1198 and 1211.

For about six hundred years after the introduction of printing, Buddhist works—and those but few in number—seem to have been the only ones that issued from the press. The *Confucian Analects* were first reprinted in Japan in 1364, from which time down to the end of the sixteenth century Japanese editions of various standard Chinese works, both in poetry and prose, were published from time to time. But the impulse to a more vigorous production was given by the conquest of Korea at the end of the sixteenth century, and by the Shōgun Ieyasu's liberal patronage of learning at the beginning of the seventeenth. The Japanese learnt from the vanquished Koreans the use of movable types. These, however, went out of fashion again before the middle of the seventeenth century, the enormous number of types necessary for the printing of the Chinese written character making the method practically inconvenient.

The first genuinely Japanese production to appear in print was the *Nihongi*, or rather the first two books of the *Nihongi*, in A. D. 1599. This work, which contains the native mythology and early history, had been composed as far back as A. D. 720. The collection of ancient poems entitled *Manyōshū*, dating from the middle of the eighth century, was also first printed about the same time. From that period onward, the work of putting into print the old manuscript stores of Japanese literature went on apace, while a new literature of commentaries, histories, poetry, popular novels, guide-books, etc., kept the block-cutters

constantly employed. The same period saw the introduction of pictorial wood-engraving.

Since about 1870, the Japanese have adopted European methods of type-founding. The result is that movable types have again come to the fore, though without causing block-printing to be entirely abandoned. All the newspapers are printed with movable types. A Japanese movable type printing-office would be a strange sight to a European printer. Provision has to be made for, not 26 characters, but 9,500, which is approximately the number of Chinese ideographs in every-day use; and of each character there must of course be different sizes—pica, long primer, brevier, and so on. Needless to say that so vast a number of characters cannot possibly fit in to one small case within reach of a single man's hand and eye. They are ranged round a large room on trays, in the order of their "radicals;" and youths, supplied each with a page of the "copy" to be set up, walk about from tray to tray, picking out the characters required, which they put in a box and then take to the compositor. As these youths, *more japonico*, keep droning out all the while in a sort of chant the text on which they are busy, the effect to the ear is as peculiar as to the eye is the sight of the perpetual motion of this troop of youths coming and going from case to case.

We have used the word "radicals" in the above description. For the sake of those who are unfamiliar with Chinese writing, it must be explained that the Chinese characters are put together, not alphabetically, but by the combination of certain simpler forms, of which the principal are termed "radicals." Thus 木 is the radical for "tree," or "wood," under which are grouped 梅 "plum-tree," 楊 "willow," 板 "a board," etc., etc. The radical for "water" is 水, abbreviated in compounds to 氵; and under it accordingly come 池 "a pond," 油 "oil," 酒 "wine," 游 "to swim," and hundreds of other

words having, in one way or another, to do with fluidity. Of course Japanese printing-offices also have to make provision for the native syllabic characters, the so-called *Kana*. But as there are only between two and three hundred forms of these, and as they are generally used only for terminations and particles, they are comparatively unimportant.

The 9,500 Chinese characters in common use are cast in metal, according to one of the European processes. When a rare character occurs in an author's manuscript, it is cut in wood for the occasion. To keep types on hand for all the seventy or eighty thousand characters of the Chinese language, would entail an expense too heavy for even the largest printing-office to bear, and would require too much room. (Compare Article on WOOD-ENGRAVING.)

**Books recommended.** *On the Early History of Printing in Japan*, in Vol. X. Part I, and *Further Notes on Movable Types in Korean and Early Japanese Printed Books*, in Vol. X Part II. of the "Asiatic Transactions," by Sir Ernest Satow. Our own remarks are chiefly founded on these two valuable essays.

**Proverbs.** Here are a few Japanese proverbs :—

Proof rather than argument.

Dumplings rather than blossoms.

Breeding rather than birth.

A mended lid to a cracked pot. (*An assemblage of incapables ; for instance, a drunken husband and a silly wife.*)

A cheap purchase is money lost.

A bee stinging a weeping face. (*One misfortune on the top of another.*)

Cows herd with cows, horses with horses. (*Birds of a feather flock together.*)

Not to know is to be a Buddha. (*Ignorance is bliss.*)

A man's heart and an autumn sky (are alike fickle).

Hate the priest, and you will hate his very hood.

Never trust a woman, even if she has borne you seven children.

The acolyte at the gate reads scriptures which he has never learnt.

Excessive tenderness turns to thousand fold hatred.

To lose is to win.

Ten men, ten minds. (*Literally "ten men, ten bellies," the mental faculties being, according to popular belief, located in the abdomen.*)

When folly passes by, reason draws back.\*

**Race.** There has been much strife among the learned on this question: to which race do the Japanese belong? Not scientific considerations only, but religious and other prejudices have been imported into the discussion. One pious member of the Scotch Kirk derives the Japanese from the Lost Tribes of Israel. An enthusiastic German professor, on the other hand, Dr. Wernich, takes up the cudgels to defend so charming a nation against "the reproach of Mongolism,"—whatever that may be. The two greatest authorities on the subject, Baelz and Rein, say, purely and simply, that the Japanese are Mongols. We incline to follow Baelz in his hypothesis of two chief streams of immigration, both coming from Korea, and both gradually spreading eastward and northward. The first of these immigrations would

\* Some persons may like to see the Japanese originals of these proverbs, which are given in the same order as that of the English renderings above:

*Ron yori shōko*

*Hana yori dango.*

*Uji yori sodachi.*

*Ware-nabe ni toji-buta.*

*Yasu-mono-kai no zeni-ushinai.*

*Naku tsura wo hachi ga sasu.*

*Ushi wa ushi-zure, uma wa uma-zure*

*Shiranu ga Hotoke*

*Otoko no kokoro to aki no sona.*

*Bōzu ga nikukereba, kesa made nikui*

*Shichi-nin no ko wo nasu to mo, onna ni kokoro wo yurusu-na.*

*Monzen no koe narawanu kyō wo yomu.*

*Kawaisa amatte, nikusa ga sen-bai.*

*Makeru wa katsu.*

*Jū-nin to-hara.*

*Muri ga tōreba, dōri hikkomu.*

have supplied the round or so-called "pudding-faced" type, common among the lower classes. The second would have supplied the aristocratic type, with its more oval outline, thinner nose, more slanting eyes, and smaller mouth—the type to which Japanese actors endeavour to conform when representing noble-men and heroes.—Be it remarked that both these types are Mongol. Both have the yellowish skin, the straight hair, the scanty beard, the broadish skull, the more or less oblique eyes, and the high cheek-bones, which characterise all well-established branches of the Mongol race. It is historically certain that *some* Mongols have come over and settled in Japan, namely, Kor-ans and Chinamen at various epochs of authentic Japanese history.

A grave difficulty in the way of all past theories on the subject of the origin of the Japanese is the sharp line of demarcation between the Japanese language and the languages of the neighbouring continent. The Japanese grammatical system, it is true, shows remarkable similarity to Korean; but such connection as Mr. Aston has endeavoured to make out between the two vocabularies is scant and shadowy. Something will be gained if we throw back to an indefinitely early period the immigration of that element of the nation whose language came to be adopted by all classes,—that is, as we presume, the pudding-faced element, the peasantry which forms the substratum of the whole, and which, as Dr. Florenz and Dr. Simmons have made clear, remained in a state of serfdom till recent times.

On this hypothesis Jimmu Tennō, the "first earthly emperor," and his followers would have been this early people's conquerors, or one set of its conquerors,—the latest and most renowned, whose legendary deeds, blended with those of other invading bands in Izumo, and with echoes of the doings of native—or perhaps also foreign—dynasties in Yumato, were worked up, under the influence of Chinese ideas, into that fantastic compound known as "early Japanese history." The solidarity of the Luchuan language with Japanese is an element of the problem

that has to be taken into account. Either the little archipelago must have been occupied by the language-giving race before the foreign conquest, or else it must have been occupied by the conquering race after the latter had adopted the language. Two other considerations may be worth adding. One is that Japanese history is solely the history of the ruling caste; the other, that from the very earliest glimmerings of that history, the student can trace a steady backward gaze at Korea as the one country beyond seas with which, from time to time, intercourse had existed.

Many guesses have been hazarded concerning possible Malay immigrations from the South, by sea or viâ the Luchu Islands. But there is no certain information, there are not even any legendary traces, of such immigrations. The Ainos, who are not a Mongol race, are indeed joint occupiers of the soil of Japan with the Japanese, and intermarrying has gone on between the two peoples, and goes on still. It has, however, been pretty well proved that this mixed breed becomes unfruitful in the third or fourth generation,—a fact which explains the rare traces of Aino blood even in the population of the extreme north of the island. The two nations are as distinct as the whites and the reds in North America.

Florenz, in Part 44 of the same.—*Land Tenure and Local Institutions in Japan*, by Dr. D. B. Simmons, in Vol. XIX. Part I. of the "Asiatic Transactions."

**Railways.** Strategical no less than business considerations have been taken into account by the Japanese government in constructing its lines of railway. The great aim was to connect the two capitals, Tōkyō and Kyōto. As a first step, work was begun on the eighteen miles separating Tōkyō from Yokohama as long ago as the year 1870, with the assistance of English engineers; and the line was opened in 1872. Kobe and Ōsaka were then connected, and other short pieces followed, the inter-

capital trunk line being delayed by various causes. Japan is not naturally suited to railway construction: the country is too mountainous; the streams—mere beds of sand to-day—are to-morrow, after a heavy rain, wild surging rivers that sweep away bridges and embankments. For these reasons, the idea of carrying the Tōkyō-Kyōto railway along the Nakasendō, or backbone of the country, which would have been far better in time of war, as being removed from the possibility of an attack from the sea-side, fell through, the engineering difficulties proving insuperable. The only alternative was to follow the Tōkaidō, the great highway of Eastern Japan, which skirts the coast along the narrow strip of flat country intervening between the foot of the hills and the Pacific Ocean. This work was completed, and the thousandth mile of railway opened, in the summer of 1889. The total mileage had increased to 2,920 at the end of January, 1898. The most difficult line constructed was that opened for traffic in 1893, between Yokokawa and Karuizawa, on the way from Tōkyō to Naoetsu. It leads over a steep mountain pass called the Usui-tōge, and the inclination is one in fifteen for a length of five miles, three miles of which are in tunnels. The train is taken up the pass by "Abt" engines, which have a cog-wheel working on a rack-rail laid between the ordinary rails.

Japanese railway enterprise, although started by the government, is now far from being exclusively in official hands. Companies, on the contrary, are now numerous, some private, others more or less under government shelter and patronage. Such, for instance, are the *Nippon Tetsudō Kwaisha* ("Japan Railway Company"), which owns the main line running north to Aomori, and the *Sanyō Tetsudō Kwaisha*, which owns the line running along the northern shore of the Inland Sea. The total mileage of the various private lines, aggregates three quarters of the whole given above.

Reduced to its simplest expression, the Japanese railway system, when completed, will practically consist of one long

trunk line from Aomori in the extreme north to Shimonoseki in the south-west, together with two large branches connecting each capital with the fruitful provinces of the west coast, minor branches to various points in the two metropolitan districts, and local lines in the islands of Kyūshū, Shikoku, and Yezo.

Notwithstanding the natural obstacles to be overcome and the destructive climate, the Japanese lines of railways have been cheaply built, because labour is cheap; and they already pay fairly well. In round numbers, the cost to government since 1872 of construction and equipment has been forty-seven million *yen*. The profits on the government railways have increased steadily year by year. The net profit for the financial year ending the 31st March, 1897, was 3,971,000 *yen*. The total number of passengers carried during the same period of twelve months over the government lines was 23,187,774, of whom over 98 per cent third class; the total freight was 1,274,842 tons. The proportion of the receipts per cent was as follows:—passenger receipts, 75.4 per cent; luggage and parcels, 4.08; goods, 20.86; miscellaneous, 0.02. The low proportion of goods receipts, which will appear marvellous to persons whose experience has been gained in England, India, or the United States, is easily explained by geographical conditions, Japan's immense coast-line and the lofty mountain-ranges that cut up the greater portion of the surface being reasons that dictate, and must continue to dictate, a preference for water-carriage over carriage by rail. The most formidable obstacle in the way of Japanese railroad enterprise is that conflicting interests and local intrigues are apt to render the law of expropriation for public benefit little more than a dead letter. The extension of the Inland Sea line (*Sanyō Tetsudō*) has been constantly impeded by this cause, as no capitalists can afford to buy land at the preposterous sums demanded by the owners. Perhaps, after all, an instinct of self-preservation sometimes guides these obstructionists. Experience on the Tōkaidō, on the "Pilgrim

Line" to Ise, on the way to Nikkō, everywhere in fact, has shown conclusively that though some of the larger cities profit by the railways, and though the empire as a whole profits, their approach has sounded the death-knell of the smaller country towns. In old walking and jinrikisha days, every little town and village along the chief highways was bustling and prosperous. Now their shops are empty, their merry inns deserted; their former customers are whirled past them without stopping.

We have alluded to the trouble caused by the capricious nature of Japanese rivers. Japan is perhaps the only country in the world where a railway may be seen to go under a river instead of over it. In the district between Kōbe and Ōsaka and also near Lake Biwa, nearly all the rivers tend to raise their beds above the level of the surrounding fields, owing to the masses of sand and pebbles continually carried down by their rapid current. The river-bed thus stands athwart the flat strip of country between the mountains and the sea as a sort of wall or dyke, and the only thing to do is to take the line underneath it by a tunnel, when the wall is of sufficient height to give headway for the train. Every now and then one of these river-banks bursts, the whole country-side is flooded, and the railway department of course put to heavy expense. Apart from such exceptional cases, the recurrence of torrential rains, typhoons, and earthquakes causes havoc which almost yearly throws the system into temporary disorder.

The Japanese railways are narrow gauge,—three feet six inches. The rates are extremely low. One may travel first class in Japan more cheaply than third class in an English parliamentary train. Nevertheless the percentage of first and even second-class passengers is very small, the two together only forming six per cent of the entire number carried. The check system for luggage is in force. There are as yet no sleeping-cars; also no dining-cars or refreshment-rooms, but neat little

boxes of native food, and drinks of various kinds are hawked about at the chief stations.

The nomenclature of many Japanese railways is peculiar. The Ō-U line, for instance, is so-called because it runs through the northern provinces of Rikuzen, Rikuchū, and Rikuoku, which together anciently bore the name of *Ōshū*, and is meant to be extended into *Uzen* and *Ugo*. Thus the first syllable of each of these words is taken. The Ban-Tan line, connecting the provinces of Harima and Tango, receives its name from the fact that the first of the two Chinese characters employed to write the word Harima is pronounced *Ban* in other contexts, while *Tan* is the first syllable of Tango. Perhaps this may make the tyro's head swim, but to the Japanese it appears perfectly plain and simple.

Japan has now its Bradshaw, under the title of *Ryokō Annai*, published monthly.

**Book recommended.** The *Annual Report of the Imperial Railway Department*.

**Religion.** Essentially an undevotional people,<sup>1</sup> the Japanese have nevertheless accorded a certain measure of hospitality to the two greatest religions of the world—Buddhism and Chris-

\* Here is the latest utterance on religion of Mr. Fukuzawa, Japan's most representative thinker and educationalist: "It goes without saying that the maintenance of peace and security in society requires a religion. For this purpose any religion will do. I lack a religious nature, and have never believed in any religion. I am thus open to the charge that I am advising others to be religious when I am not so. Yet my conscience does not permit me to clothe myself with religion, when I have it not at heart \* \* \* Of religions, there are several kinds,—Buddhism, Christianity and what not. Yet, from my standpoint, there is no more difference between these than between green tea and black tea. It makes little difference whether you drink one or the other. The point is to let those who have never drunk tea partake of it and know its taste. Just so with religion. Religionists are like tea merchants. They are busy selling their own kind of religion. As for the method of procedure in this matter, it is not a good policy for one to disparage the stock of others in order to praise his own. What he ought to do, is to see that his stock is well-selected and his prices cheap, etc., etc." (We quote from the translation given in the "Japan Herald" for the 9th September, 1897.)

tianity. Their own unassisted efforts in the direction of religion are summed up in archaic Shintō. Modern Shintō has been profoundly influenced by Buddhism and Confucianism.

On more than one occasion we have heard a Japanese asked by a European traveller what his religion was,—whether Buddhist or Shintō,—and have been amused at his look of blank perplexity. He could not, for the life of him, make out what the enquirer was driving at. It is the established custom to present infants at the Shintō family temple one month after birth. It is equally customary to be buried by the Buddhist parish priest. The inhabitants of each district contribute to the festivals of both religions alike, without being aware of any inconsistency. They do not draw the hard and fast distinctions with which we are familiar.

Lest such laxness and the use of the phrase “essentially undevoational” which we have employed above, should mislead the reader, he must remember that devotion and ethics, theology and conduct, are separate things. Because the Japanese are irreligious, we would by no means be understood to accuse them of being specially immoral. Even the word “irreligious” will be considered by some of those who know them best scarcely to suit the case. At any rate, Japanese irreligion differs favourably from the utterly blank irreligion that is flaunted in the modern West. Though they pray little and make light of supernatural dogma, the religion of the family—filial piety—binds them down in truly sacred bonds. The most materialistic Japanese would shrink with horror from neglect of his father’s grave, and of the rites prescribed by usage for the anniversaries of a father’s or other near kinsman’s death. Though unmindful of any future for himself, he nevertheless, by a happy inconsistency, acts as if the dead needed his care. This state of things is not confined to Japan, but characterises the whole Far-East, the whole Chinese world. The subject is a difficult one. These remarks are thrown out merely by way of suggestion, in

order to warn Europeans from judging too summarily of conditions alien to the whole trend of their own experience.

(See also Articles on **BUDDHISM, HISTORY AND MYTHOLOGY, MISSIONS, AND SHINTŌ.**)

**Rice.** SEE **AGRICULTURE.**

**Roads.** Several of the chief highways of Japan are extremely ancient. Such are some of the roads near Kyōto, and the Nakasendō running the whole way from Kyōto to Eastern Japan. The most celebrated road of more recent origin, though itself far from modern, is the Tōkaidō, along which the Daimyōs of the western provinces used to travel with their splendid retinues to the Shōgun's court at Yedo. The Ōshū Kaidō leading north, and the Reiheishi Kaidō leading to Nikkō, are other great historic roads. Many roads in Japan are lined with tall cryptomerias and other trees. Shortly after the introduction of telegraphy into the country, the Japanese began to hew down these monumental trees in their zeal for what they believed to be civilisation. The telegraph-poles would, they thought, show to much better advantage without such old-fashioned companions. A howl from the foreign press of Yokohama fortunately brought the official Goths to their senses, and after the Tōkaidō had been partially denuded, the remaining avenues were spared.

In too many of the newly-built roads, though the engineering selection is good, the execution is less so. Roads are made of clay and dirt only. They run over artificial embankments supported by mud foundations, there is no sufficient provision made for carrying off water, and the gradient of the hillside along which the road itself is carried is left much too steep. Holes, ruts, and landslips often attended with loss of life, are the result. There is no idea of macadamising. As for mending, that is done by cart-loads of stones or earth, which effectually supply travellers with dust during the dry weather and a slough of despond whenever it rains. Sometimes twigs of trees and

even old cast-off straw sandals are utilised as materials for road-mending. The best roads are to be found in the province of Ise, and along the shores of the Inland Sea and of Lake Biwa, where nature provides good material in the shape of disintegrated granite.

During the eighties an immense amount of money was spent in opening up mountain districts by means of new roads, bridges, and viaducts. But as the development of the railway system almost simultaneously drew traffic away to other parts, and as the roads themselves were not calculated to withstand the rigours of the climate, and, above all, were not really needed by the scanty peasant population, many have disappeared leaving not a trace behind, while in other cases the narrow but permanent ancient track is preferred, because much shorter. The once noted road over the Harinoki Pass and that from Aizu to Shiohara may be adduced as instances.

**Sake.** There is no appropriate European name for this favourite intoxicant. Both "rice-beer" and "rice-brandy," by which the word has sometimes been translated, give a false idea of the thing. *Sake* is obtained from fermented rice by a complicated process, which can only be carried out during the winter, and it contains from eleven to fourteen per cent of alcohol. Curiously enough, European heads seem to be affected by it much less easily than the Japanese themselves are; but it is unwise to indulge in *sake* and wine at the same repast. A very strong variety, called *shōchū*, which is distilled from the dregs, contains from twenty to fifty per cent of alcohol. Another kind, called *mirin*, is more of a liqueur.

**Books recommended.** Rein's *Industries of Japan*, p. 95.—*The Chemistry of Sake-brewing*, published as one of the "Memoirs of the Science Department of the Imperial University."

**Salutations.** The only native Japanese salutation is the bow, which often amounts to a prostration wherein the forehead touches the ground. Hand-shaking was unknown till a few

years ago, and is little practised even now—a proof of Japanese good sense, especially in hot weather. As for kissing, that is tabooed as utterly immodest and revolting

**Samurai.** In the early Middle Ages—say, before the twelfth century—the soldiers of the Mikado's palace were said to *samurau*, that is, “be on guard” there. But when feudalism came in, the word *samurai* was taken to denote the entire warrior class. “Warriors,” “the military class,” “the gentry,” are perhaps the best English renderings of the word; for it was of the essence of Old Japan that all gentlemen must be soldiers, and all soldiers gentlemen. The Japanese craze for altering names was exemplified in 1878, by the change of the historical and thoroughly native word *samurai* to that of *shizoku*, a Chinese term of precisely the same meaning. Under this new designation, the *samurai* still continue to exist as one of the three classes into which Japanese society is divided.

In the feudal times which lasted till A.D. 1871, the samurai lived in their Daimyōs' castle, attended their Daimyōs on all occasions, and received from them rations for themselves and their families—rations which were calculated in so many *koku*—that is, bags of rice annually. One of the early measures of the new Imperial government was to commute these incomes for a lump sum, to be paid in government bonds. Optional at first, in December, 1873, the commutation was rendered obligatory by a second edict published in August, 1876. Since that time, many of the samurai—unaccustomed as they had been to business and to the duty of working for their livelihood—have fallen into great misery. The more clever and ambitious, on the other hand, practically constitute the governing class of the country at the present day, their former lords and masters, the Daimyōs, having lagged behind in the race, and there being still a sufficient remnant of aristocratic spirit to render the rise of a plebeian to any position of importance a matter of considerable difficulty.

**Sculpture.** See CARVING.

**Shimo-bashira.** Lit. "frost-pillars," seem to be a peculiarly Japanese phenomenon, and as such they have provoked some curiosity among the resident learned. They are first seen after a bright frosty night in early winter, and always in damp, friable soil, the fine uppermost layer of which is borne upward on their surface, so that one may fail to notice them until, in walking, the foot crushes down two or three inches into what had looked like firm ground; but often they cling to the high sides of shady lanes. Examined singly, they present the appearance of tiny hexagonal columns or rather tubes of ice, but they generally occur in clumps or bundles half melted together. Sometimes joints can be perceived in them, and at each joint, a minute particle of earth. The late Dr. Gottfried Wagener explained the phenomenon as follows:—"When the surface of damp soil, in which the water is divided into slender canals, cools at night by radiation, the water at the exits of the canals hardens into ice. This ice then assists the hardening of the adjacent particles of water, which also congeal before the soil itself has fallen to freezing point, and before therefore the water can freeze fast to the particles of earth. The ice then extends in the direction of least resistance, that is, upwards. In this manner, one molecule of ice after another pushes its way out of the slender canals,—a process which also explains the thread-like structure of the frost-pillars. These push up with them, in their growth, the minute particles of earth which lie between their extremities, and which also are cooled by radiation and stick to the ice. They form a crust which itself protects the underlying soil against further radiation. This accounts for the fact that the soil on which the frost-pillars stand, far from being frozen, is so soft and wet that a thin cane may easily be stuck deep into it. That the ice needles really grow from below and force their way up out of the soil, is proved by the circumstance that in shady places, where they are not melted during the day and can therefore continue to grow for several

nights in succession, several sharply defined thin layers of earthy particles may be distinguished in the pillars. Frost-pillars are also formed under a thin covering of snow, when the upper surface of this latter melts during the day-time. The water then penetrates into the lower layer of snow, and thence into the soil. The thin snow-covering freezes during the night, and the hardening process, as above described, proceeds on into the canals below ground."

**Book recommended** Our quotation is from a short paper by Dr. Wagener, in Part 12 of the *German Asiatic Transactions*.

**Shintō.** Shintō, which means literally "the way of the gods," is the name given to the mythology and vague ancestor and nature-worship which preceded the introduction of Buddhism into Japan, and which survives to the present day in a somewhat modified form. Referring the reader to the article on HISTORY AND MYTHOLOGY for a sketch of the Shintō pantheon, we would here draw attention to the fact that Shintō, so often spoken of as a religion, is hardly entitled to that name. It has no set of dogmas, no sacred book, no moral code. The absence of a moral code is accounted for, in the writings of the modern native commentators, by the innate perfection of Japanese humanity, which obviates the necessity for such outward props. It is only outcasts, like the Chinese and Western nations, whose natural depravity renders the occasional appearance of sages and reformers necessary; and even with this assistance, all foreign nations continue to wallow in a mire of ignorance, guilt, and disobedience towards the heaven-descended, *de jure* monarch of the universe—the Mikado of Japan.

It is necessary, however, to distinguish three periods in the existence of Shintō. During the first of these—roughly speaking, down to A.D. 550—the Japanese had no notion of religion as a separate institution. To pay homage to the gods, that is, to the departed ancestors of the Imperial family, and to the manes of other great men, was a usage springing from

the same mental soil as that which produced passive obedience to, and worship of, the living Mikado. Besides this, there were prayers to the wind-gods, to the god of fire, to the god of pestilence, to the goddess of food, and to deities presiding over the saucepan, the cauldron, the gate, and the kitchen. There were also purifications for wrong-doing, as there were for bodily defilement, such as, for instance, contact with a corpse. The purifying element was water. But there was not even a shadowy idea of any code of morals, or any systematisation of the simple notions of the people concerning things unseen. There was neither heaven nor hell—only a kind of neutral-tinted Hades. Some of the gods were good, some were bad; nor was the line between men and gods at all clearly drawn. There was, however, a rude sort of priesthood, each priest being charged with the service of some particular local god, but not with preaching to the people. One of the virgin daughters of the Mikado always dwelt at the ancient shrine of Ise, keeping watch over the mirror, the sword, and the jewel, which he had inherited from his ancestress, Ama-terasu, Goddess of the Sun. Shintō may be said, in this its first period, to have been a set of ceremonies as much political as religious.

By the introduction of Buddhism in the middle of the sixth century after Christ, the second period of the existence of Shintō was inaugurated, and further growth in the direction of a religion was stopped. The metaphysics of Buddhism were far too profound, its ritual far too gorgeous, its moral code far too exalted, for the puny fabric of Shintō to make any effective resistance. All that there was of religious feeling in the nation went over to the enemy. The Buddhist priesthood diplomatically received the native Shintō gods into their pantheon as avatars of ancient Buddhas, for which reason many of the Shintō ceremonies connected with the court were kept up, although Buddhist ceremonies took the first place even in the thoughts of the converted descendants of the sun. The Shintō rituals, (*no iu*), previously

handed down by word of mouth, were then first put into written shape. The term "Shintō" itself was also introduced, in order to distinguish the old native way of thinking from the new doctrine imported from India; for down to that time no one had hit on the notion of including the various fragmentary legends and local usages under one general designation. But viewing the matter broadly, we may say that the second period of Shintō, which lasted from about A.D. 550 to 1700, was one of darkness and decrepitude. The various petty sects into which it then divided itself, owed what little vitality they possessed to fragments of cabalistic lore filched from the baser sort of Buddhism and from Taoism. Their priests practised the arts of divination and sorcery. Only at Court and at a few great shrines, such as those of Ise and Izumo, was a knowledge of Shintō in its native simplicity kept up; and even there it is doubtful whether changes did not creep in with the lapse of ages. Most of the Shintō temples throughout the country were served by Buddhist priests, who introduced the architectural ornaments and the ceremonial of their own religion. Thus was formed *Ryōbu Shintō*,—a mixed religion founded on a compromise between the old creed and the new,—and hence the tolerant ideas on theological subjects of most Japanese of the middle and lower classes, who will worship indifferently at the shrines of either faith.

The third period in the history of Shintō began about the year 1700, and continues down to the present day. It has been termed the period of the "revival of pure Shintō." During the seventeenth and eighteenth centuries, under the peaceful government of the Tokugawa dynasty of Shōguns, the literati of Japan turned their eyes backward on their country's past. Old manuscripts were disinterred, old histories and old poems were put into print, the old language was studied and imitated. Soon the movement became religious and political—above all, patriotic, not to say chauvinistic. The Shōgunate was frowned on, because it had supplanted the autocracy of the

heaven-descended Mikados. Buddhism and Confucianism were sneered at because of their foreign origin. Shintō gained by all this. The great scholars Mabuchi (1697-1769) Motoori (1730-1801), and Hirata (1776-1843) devoted themselves to a religious propaganda—if that can be called a religion which sets out from the principle that the only two things needful are to follow one's natural impulses and to obey the Mikado. This order of ideas triumphed for a moment in the revolution of 1868. Buddhism was disestablished and disendowed, and Shintō was installed as the only state religion, the Council for Spiritual Affairs being given equal rank with the Council of State, which latter controlled things temporal. At the same time thousands of temples, formerly Buddhist or *Ryōbu-Shintō*, were, as the phrase went, "purified," that is, stripped of their Buddhist ornaments, and handed over to Shintō keeping. But as Shintō had no root in itself—being a thing too empty and jejune to influence the hearts of men—Buddhism soon rallied. The Council for Spiritual Affairs was reduced to the rank of a department, the department to a bureau, the bureau to a sub-bureau. The whole thing is now a mere shadow, though Shintō is still in so far the official cult that certain temples are maintained out of public moneys, and that the attendance of certain officials is required from time to time at ceremonies of a semi-religious semi-courtly nature. Hard pressed to establish their *raison d'être* and retain a little popularity, the priests have taken to selling cheap prints of religious subjects after the fashion of their Buddhist rivals.

Certain private scholars, too—Dr. Inouye Tetsujirō, for example—have recently attempted to infuse new life into Shintō by decking it out in ethical and theological plumes borrowed from abroad. The latest of these visionaries is a Mr. Sakamoto, who writes in the papers to urge the establishment of an association which should inculcate, under new Shintō names, the seven cardinal virtues (*Confucian*), the doctrine of cause and

effect (*Buddhist*), and that of a trinity in unity (*Christian*). But of course such cut-flowers, having no vital sap left in them, wither at once.

The lover of Japanese art will bear the Shintō revivalists ill-will for the ridiculous "purification" which has destroyed countless gems of Buddhist architecture and ornament—not for the sake of a grand moral ideal, as with the Puritans of Europe, but for an ideal immeasurably inferior to Buddhism itself. On the other hand, the literary style of their writings outshines anything produced by the Buddhists; and their energy in rescuing the old Japanese classic authors from neglect is worthy of all praise.

The Shintō temple (*yashiro* or *jinja*) preserves in a slightly elaborated form the type of the primeval Japanese hut, differing in this from the Buddhist temple (*tera*), which is of Chinese and more remotely of Indian origin. Details of the names and uses of the various temple buildings, together with other matters, are given in the Introduction to Murray's *Handbook for Japan*. It may suffice briefly to indicate here a means of distinguishing from each other the temples of the two religions. The outward and visible signs of Shintō are,—first, a wand from which depend strips of white paper cut into little angular bunches (*gohei*), intended to represent the offerings of cloth which were anciently tied to branches of the cleyera tree at festival time; secondly, a peculiar gateway called *torii*. Another difference is that the Shintō temple is thatched, whereas the Buddhist temple is tiled. Furthermore the Shintō temple is plain and empty, while the Buddhist is highly decorated and filled with religious properties. (See also Articles on ARCHITECTURE and on TORII.)

**Books recommended.** *Murray's Handbook*, just mentioned, for a brief résumé of the subject. The following treatises are much more elaborate:—*The Revival of Pure Shintō*, by Sir Ernest Satow, forming the Appendix to Vol. III; *The Shintō Temples of Ise*, by the same, in Vol. II, and *Ancient Japanese Rituals*, by the same, in Vols. VII. and IX. of the "Asiatic Transactions."—*Introduction to the Kojiki*, forming the Supplement to Vol. X. of the same.—*Occult Japan*, by Percival Lowell.—*The Religions of Japan*, by Rev. W. E. Griffis.

**Shipping.** The shipping industry is one of the most important in Japan, holding now, as it would seem to have done from time immemorial, a prominent place in the commerce of the country. The reason for this is not far to seek, being found in Japan's insular position, her extensive sea-board, and her mountainous interior. The Japanese take kindly to a seafaring life. During the middle ages, they were distinguished among Oriental nations for their spirit of maritime enterprise. Korea, China, Formosa, even the distant Philippine Islands, Cambodia, and Siam saw the Japanese appear on their coasts, now as peaceful traders, now as buccaneers. The story of one of these buccaneers, named Yamada Nagamasa, *alias* Tenjiku Hachibei, who ended by marrying a Siamese princess and becoming viceroy of the country, reads more like a chapter from the "Arabian Nights" than like sober reality. It is evident, too, that the Japanese of the early part of the seventeenth century were determined not to be left behind in the art of shipbuilding. The English master-mariner Will Adams, who came to Japan in the year 1600, built ships for Ieyasu, the then Shōgun, one of which made voyages to Manila and even to Mexico. Suddenly all was changed. Alarmed beyond measure at the progress of Roman Catholicism, and fearing that in Japan, as elsewhere, the Spanish monk would be followed by the Spanish soldier of fortune, Iemitsu, the third Shōgun of the Tokugawa dynasty, issued an edict in the year 1636, whereby all foreign priests were expelled from the empire, foreign merchants were restricted to the two south-western ports of Nagasaki and Hirado, and all Japanese subjects were forbidden under pain of death to leave Japan. Drastic measures were resorted to in order to enforce the terms of this edict, all vessels of European build and even all larger vessels of native build were ordered to be destroyed, only small junks sufficient for coasting purposes being allowed to be retained. This is the style of junk still seen at the present day in Japanese waters. It is distin-

guished by a single square sail, which is so awkward as to render the vessel difficult to handle except when running before the wind. Japan's shipping enterprise was crippled for over two centuries, though the number of coasting junks no doubt remained large; for the character of the country made communication by water indispensable.

When the feudal government fell like a card palace, the restrictions on shipbuilding fell with it. The new Imperial government took a laudable interest in the development of a mercantile marine of foreign build. Among other measures adopted with this end in view, the regulation prohibiting the construction of junks of over five hundred *koku*\* burthen may be cited as one of the most efficacious. Nor was everything left to official initiative. Mr. Iwasaki Yatarō, the celebrated millionaire, started steamers of his own somewhere about 1870; and the company which he worked with the aid of judiciously selected European directors and agents, European captains, and European engineers, soon rose, under the name of the Mitsubishi Mail Steam Ship Company, to be the most important commercial undertaking in the empire. It even influenced politics; for to the facilities which the Mitsubishi afforded for carrying troops at the time of the Satsuma rebellion, was due in no small measure the triumph of the imperialists in that their hour of need. Later on, another company named the *Kyōdō Un-yū Kwaisha*, was formed to run against the Mitsubishi. But the rivalry between the two proving ruinous, they were amal-

---

\* Article 3 of the "Regulations and Rules for the Measurement of Vessels' Capacity," published in 1888 by the Mercantile Marine Bureau of the Imperial Department of Communications, fixes the capacity of the *koku*, in vessels of Japanese build, as equivalent to ten cubic feet. Whether this was the precise value of the *koku* in earlier time, we cannot say. Probably not; for Old Japan knew little of exact computations, and, as a rule, each province was a law unto itself in questions relating to weights and measures.

† From *mitsu*, "three" and *hishi*, "the water caltrop," hence "lozenge," the leaves of the caltrop being approximately lozenge-shaped, and three lozenges being the company's crest.

gamated in 1885, under the name of the *Nippon Yūsen Kwaisha*, or Japan Mail Steam Ship Company. This company now owns some seventy vessels which not only trade between the various parts of the coast, but maintain regular services between Japan and Europe, Australia, British India, America, China, Siberia, and the Philippines. The Ōsaka Shōsen Kwaisha is another large private company. It owns some sixty vessels engaged in the domestic carrying trade. A score of smaller companies and numerous privately owned vessels render the means of travel and transit everywhere easy.

Iwasaki's keen enterprising spirit, seconded by government assistance, greatly contributed to develop the country. Places formerly dependent on the casual services of junks found themselves supplied with regular shipping facilities, or were at least able to command tonnage at short notice. Methods, too, rapidly improved. The happy-go-lucky way of conducting the loading of a junk, which could afford to wait an indefinite period for a cargo, necessarily yielded to prompt shipment at the time stipulated. The China war of 1894-5 gave a great impetus to shipping. Many private steamers were engaged as transports, and others (often, it is true, considerably the worse for wear) bought to supply their place. Then followed laws for the encouragement of navigation and shipbuilding, also the granting of liberal subsidies, with the result that Japanese steamers—as indicated above—now compete with the foreign carriers on the chief lines to and from Japan. It must be allowed that the drain is considerable. Great attention has been devoted to the construction of repairing and building-yards and of dry docks. The weakest points are the paucity of efficient native officers to navigate the ships, and the marked tendency of Japanese crews to insubordination.

So far the domestic trade. Japan is no less well-supplied with foreign tonnage, thanks partly to the sudden and enormous increase in the number of tourists visiting these shores. The

P. and O. Company, the Messageries Maritimes, and the Nord-deutscher Lloyd all run steamers regularly throughout the year to Europe. Across the Pacific Ocean, communication is kept up by the Occidental and Oriental Company and the Pacific Mail running to San Francisco, by the Canadian Pacific Company, whose destination is Vancouver, and by lesser lines to Tacoma and to Portland in Oregon. The total tonnage of shipping entered at Japanese ports from foreign countries during the last year for which statistics are available (1896) was 8,630,971, of which 2,093,424—that is, over 57 per cent—British. This enormous preponderance of British shipping interests in Japanese waters has been maintained for a long series of years. The nations following next, but at a great distance, are Japan herself, Germany, Norway, Russia, and the United States, in the order indicated. France and Austria, too, run each into five figures.

**Shōgun.** The title of *Shōgun*, which means literally “generalissimo,” and which was destined to play such a momentous part in Japanese history, seems to have been first used in A.D. 813, when one Watamaro was appointed *Sei-i Tai-Shōgun*, that is, “Barbarian-Subduing Generalissimo,” to wage war against the Ainos in the north of the empire. The title was employed afterwards in similar cases from time to time. But Yoritomo, at the end of the twelfth century, was the first of these generalissimos to make himself also, so to say, Mayor of the Palace, and in effect ruler of the land. From that time forward, various dynasties of Shōguns succeeded each other throughout the middle ages and down to our own days. The greatest of these families were the Ashikaga (A.D. 1336-1570) and the Tokugawa (A.D. 1603-1867). A concatenation of circumstances, partly political, partly religious, partly literary, led to the abolition of the Shōgunate in the year 1868. The Mikado then stepped forth again, to govern as well as reign, after an eclipse of well-nigh seven hundred years.

The practice of most modern writers on Japanese subjects—foreigners as well as natives—is to treat the Shōguns as usurpers. But surely this is a highly unphilosophical way of reading history. It is not even formally correct, seeing that the Shōguns obtained investiture from the Court of Kyōto as regularly as ministers of state have obtained their commissions in later times. We cannot undertake here to go into the causes that produced Japanese feudalism, with the Shōguns at its head. But if seven centuries of possession do not constitute a legal title, how many of the governments at present existing in the world are legitimate? And what test is there, or can there be, of the legitimacy of any government except the general acquiescence of the governed?

**Shooting.** No one is advised to come to Japan for sport. Deer and even bears do, no doubt, exist in the northern island of Yezo; pheasants, snipe, hares, and other small game in the Main Island. But "Treaty Limits," within which alone foreigners can obtain licenses to shoot, are almost denuded of game, unless it be snipe and quail, in consequence of having been shot over for a generation. Shooting licenses may be obtained at the prefectural office (*kenchō*) of the various open ports, and at the *Tōkyō-Fu*, or city office, in Tōkyō. The fee is \$10. The shooting season lasts from the 15th October to the 15th April. These dates will seem late to English sportsmen; but it must be remembered that the seasons begin later in Japan than in England,—spring as well as autumn.

**Siebold.** Philipp Franz, Freiherr von Siebold (A.D. 1796-1866), author of many books, both in Latin and German, on the zoology, botany, language, and bibliography of Japan and the neighbouring lands, and best-known by the magnificently illustrated folio work entitled *Nippon, Archiv zur Beschreibung von Japan*,\* which is in itself an encyclopædia of the in-

---

A second (smaller) edition has recently been published by his sons.

formation concerning Japan which existed in his day, came of an old Bavarian family. Like Kaempfer a century and a half before him, he judged, and judged rightly, that the service of the Dutch East India Company was the royal road to a knowledge of the then mysterious empire of Japan. Appointed leader of a scientific mission fitted out at Batavia, he landed at Deshima, the Dutch portion of Nagasaki, in the month of August, 1823. By force of character, by urbanity of manner, by skill as a physician, even by a system of bribery which fell in with the customs of the country, and which surely, under the circumstances, no sensible man of the world will condemn, he obtained an extraordinary hold over the Japanese, suspicious and intractable as they then were. Having, in 1826, accompanied to Yedo the Dutch embassy which went once during the reign of every Shōgun to show their respect and obtain favours by grovelling at His Highness's feet and entertaining him with pranks and songs, Siebold obtained permission to remain behind—the sole European in that great Asiatic capital, then absolutely sealed against the outer world. The excuse pleaded and accepted was that he would instruct the Japanese physicians and surgeons in the more recondite branches of their art. His leisure he utilised in multifarious scientific researches; and so well did he know how to ingratiate himself that some of the highest in the land willingly contributed to his store of knowledge. Suddenly a rumour got about that the chief Court spy—a very important official in those days—had sold him a map of the country. This was treason according to the old Japanese law. The spy was ordered to commit *harakiri*, and Siebold was cast into a dungeon, from which he emerged only on the 18th January, 1830, with strict orders never to return to Japan.

Arriving in Holland, he was created a baron and a colonel in the army by the king of that country, and spent the next twenty-nine years in writing his numerous works and arranging his scientific collections in the museums of Leyden, Munich, and

Würzburg. More permanent even in their results than these learned labours was his activity in the field of practical botany. To him our western gardens owe the Japanese lilies, peonies, aralias, camellias, chrysanthemums, and scores of other interesting and beautiful plants with which they are now adorned.

Meanwhile, Commodore Perry's expedition had burst open Japan. Siebold, in his old age, returned as a semi-official ambassador to that same Yedo which he had quitted in chains so many years before. This mission was not altogether successful. The times were for war, not for the peaceful negotiations of a man of science. Siebold's proper field was not politics, but learning. It was therefore perhaps no loss to his reputation that a second semi-political expedition to Japan, which the Emperor Napoleon III. had thought of entrusting to him, was never carried out. Judged by his scientific works and their practical results, Siebold is the greatest of the many great Germans who have contributed so much to the world's knowledge of Japan,—Kaempfer in the seventeenth century and Rein in our own day being the other most illustrious names. If small people may be allowed to criticise giants, we would here note that the only weakness discoverable in the early German school of investigators, as represented by Kaempfer, Siebold, and even Rein, is a certain insufficiency of the critical faculty in questions of history and language. Surely it is not enough to get at the Japanese sources. The Japanese sources must themselves be subjected to rigorous scrutiny. It was reserved for the English school, represented by Satow and Aston, to do this—to explore the language with scientific exactness, and to prove, step by step, that the so-called history, which Kaempfer and his followers had taken on trust, was a mass of old wives' fables. Quite lately, however, Riess, Florenz, and others have gained for German scholarship bright laurels in this field also.

**Books recommended** This sketch is founded on an obituary article by Gerhard Schurnhofer, translated in the *Japan Weekly Mail* of the 27th December, 1879. Siebold tells the story of his own earlier journeyings in his *Nippon Archiv*. The second edition has a short biography.

**Silk.** The silk-worm was still a rare novelty at the dawn of Japanese history—just imported, as it would seem, from Korea. The first mention of it is in the annals of the reign of the Emperor Nintoku, who is supposed to have died in A.D. 399. Up till then, the materials used for clothing had been hempen cloth and the bark of the paper-mulberry, coloured by being rubbed with madder and other tinctorial plants. The testimony of Japanese tradition to the foreign origin of silk, and its absence here in earlier ages, go to support the results of modern research to the effect that neither the true silk-worm nor the mulberry-tree on whose leaves it feeds ever occurs wild in this archipelago. Striking change indeed! Silk has, for at least thirteen hundred years, helped to dress the Japanese upper classes, male as well as female, and has come to form the chief mainstay of the national prosperity.

The Japanese silk-worm moth is the *Bombyx mori*, L.; its mulberry-tree the “white mulberry,”—*Morus alba*, L. Insect and tree have alike developed several varieties under cultivation. As a rule the trees are pollarded, and Japanese thrift takes advantage of the space between the stumps to grow small crops of useful vegetables. The branches are generally carried home for stripping. The Japanese silk-worm manifests some marked peculiarities at different stages of its life history. The eggs have extremely fragile shells, for which reason the moths are made to deposit them on cardboard; the worms are sluggish in their habits, and the cocoons smaller and lighter than those of Italy and the Levant, though the silk is but little inferior in quality. Some indeed, from certain filatures in the province of Shinano, is superior on account of its brilliantly white colour. Careless reeling, with consequent irregularity, is the weak point. In

many parts of the country, primitive methods of working survive unchanged ; in others, foreign machinery has been introduced.

Besides the true silkworm, there is another species called *yama-mai*, which feeds on the oak-leaf, and produces cocoons of great strength and beauty. Yet another—a wild one, called *sukari*, whose food is the leaf of the chestnut tree—has far less value.

The central and northern provinces of the main island have from time immemorial been dotted with silk-producing districts. Nothing is so remarkable in the recent industrial development of Japan as the manner in which these districts have spread, until scarcely a rural commune remains without its mulberry plantations. Statistics confirm what any observant eye can notice. During the last thirteen years the area planted with mulberry-trees has increased 174 per cent, and as much as 67,000,000 *yen* worth of silk is sent over-sea in a single year. What the domestic consumption may be, we cannot say ; but it must be enormous. Think of the dresses, the sashes, the quilts, the wrappers for gifts, the brocades, the silk crape, the rolls of silk for painting or writing on, and the thousand other uses to which this most beautiful of all fabrics is put.

Silk is exported in various forms,—in its raw state, reeled as filatures, re-reels, and hanks, as cocoons and waste-silk ; manufactured, chiefly in the form of piece-goods and handkerchiefs. For some years there was also a large export of silk-worms' eggs. By far the largest portion of the crop is shipped to the continent of Europe ; but England and America also participate in the trade to some slight extent. Seeing the gigantic expansion of the silk export trade, it is a pity that Japanese want of commercial probity should imperil its future by resorting to adulteration. Meanwhile, the Government evinces paternal interest in this great branch of industry. A bill was passed in 1897, empowering the authorities to grant bounties to Japanese undertaking direct export. Hitherto the trade has centred in

Yokohama, and has been almost entirely in the hands of foreign merchants. The season for reeled silk lasts the entire year, beginning on the 1st July and ending on the 30th June following.

**Book recommended.** Rein's *Industries of Japan*, p. 378 *et seq.*

**Singing-Girls.** The charms of the Japanese singing-girl have been dwelt on so often that we gladly leave them to her more ardent admirers. Deprived of her, Japanese social gatherings would lose much of their vivacity and pleasing *abandon*, and many a match, interesting to the gossips, would never be made; for quite a number of prominent men have shown their partiality for the fair warblers in the most practical of ways, namely, by marrying them. The singing-girl's talk, more even than her songs, helps her to such occasional good fortune; for she alone, of all classes of her countrywomen, has divined something of the art of conversation. Of late years the field of her operations has been limited by the fact that in official circles, the European banquet, with its familiar *salmis* and *aspics* and its intolerable after-dinner speeches, has well-nigh supplanted the native feast. Waiters in swallow-tails replace the damsels of the guitar and the wine-cup.

The training of a singing-girl, or *geisha*, as the Japanese term her, which includes lessons in the art of dancing, often begins when she is seven years old. She is then practically engaged for a number of years, the career once entered on being difficult to quit, unless good fortune brings some wealthy lover able and willing to buy her out. There is a capitation tax of two *yen* per month on the actual singing-girls, and of half that sum on the little 'prentices.

**Book recommended.** *The Geisha's Calling*, in Inouye's "Sketches of Tōkyō Life."

**Societies.** The Japanese of our day have taken kindly to societies and associations of all sorts. They doubtless feel that

their nation has to make up now for the long abstinence from such co-operative activity which was enforced during the Tokugawa régime, when it was penal for more than five persons to club together for any purpose.

The five most influential societies at present are the Red Cross Association, under the immediate patronage of the Empress, with a membership of over 315,000 ; the Agricultural Society, with over 7,000 members ; the Sanitary Society, with over 5,000 ; the Temperance Society, with nearly 4,000 ; and the Educational Society, with over 2,000. These, and not a few of those next to be mentioned, have branches in the provinces, and most of them publish transactions. The Geographical Society of Tôkyô, the Oriental Society, the Economical Society, the Philosophical Society, the Engineering Society, the Electrical Society, the Medical Society, and the *Gakushi-Kai-in*, an association with aims kindred to those of the Educational Society, have done excellent work. We have, furthermore, a Society of Arts, Judicial, Anthropological, and various other Scientific and Literary Societies, a Colonisation Society, a Woman's Temperance Society, a Young Men's Christian Association, an Association of Buddhist Young Men, and others of various hues and complexions, not to mention political clubs, of which the number is very great and constantly changing. There is as yet unfortunately no Japanese branch of that most purely charitable of all associations, the Society for the Prevention of Cruelty to Animals. Were one established, it would find a wide scope for its endeavours.

Some of the Japanese societies have eccentric rules. Thus, there is one called the Mustache Society, whose members consist of amateur singers,—of the male sex only, for no one without a mustache is eligible. The Pock-mark Society, we believe, still exists, though vaccination has sadly thinned its ranks. The Society for the Abolition of Present-giving has (thank Heaven !) come to grief. In no country of the world do *les petits cadeaux*

*qui entretiennent l'amitié* play a more charming part than in Japan. Japan is becoming prosaic fast enough in all conscience. Why ruthlessly pull up by the roots the few graces that remain?

**Books recommended.** *The Gakushikarin*, in Vol. XV. Part I., and *The Japanese Education Society*, in Vol. XVI. Part I. of the "Asiatic Transactions," both by Walter Denning.

**Sōshi.** See end of Article on EDUCATION.

**Story-Tellers.** Though the Japanese are a nation of readers, they love also to listen to the tales of the professional story-teller, who is quite an artist in his way. The lower sort of story-teller may be seen seated at the street-corner, with a circle of gaping coolies round him. The higher class form guilds who own special houses of entertainment called *yose*, and may also be engaged for the evening to amuse private parties. Some story-telling is rather in the nature of a penny reading. The man sits with an open book before him and expounds it,—the story of the Forty-Seven Rōnins perhaps, or the Chinese novel of the "Three Kingdoms" (*Sungoku Shu*), or an account of the Satsuma rebellion or of the old wars of the Taira and Minamoto clans in the middle ages;—and when he comes to some particularly good point, he emphasises it by a rap with his fan or with a little slab of wood kept by him for the purpose. Such a reading is called *gundan* if the subject be war; otherwise it is *kōshaku*, which means literally a "disquisition." The *hanashi ka*, or story-teller proper, deals in love-tales, anecdotes, and imaginary incidents.

The entertainment offered at a *yose* is generally mixed. There will be war-stories, love-tales, recitations to the accompaniment of the banjo, the same programme being mostly adhered to for a fortnight, and a change being made on the 1st and 16th of the month. As the number of such houses in every large city is considerable, hearers may nevertheless find something new every night to listen to, and the higher class of story-tellers themselves may realise what for Japan is a very fair income.

For they drive about from one house of entertainment to another, stopping only a quarter of an hour or so at each,—just time to tell one story and earn a dollar or two by it.

Many foreign students of the Japanese language have found the *yose* their best school; but only one has hitherto thought of going there, not as a listener, but as a performer. This is an Englishman named Black, whose command of Japanese is so perfect, and whose plots borrowed from the stores of European fiction prove such agreeable novelties, that the Tōkyō story-tellers have admitted him to their guild.

**Book recommended.** *Sketches of Tōkyō Life*, by J. Inouye.

**Sun, Moon, and Stars.** In the early Japanese mythology the sun is ruled over by a goddess, the glorious Ama-terasu, or “Heaven-Shiner,” from whom is descended the Imperial family of Japan. The moon belongs to her brother, the rough and violent god Susa-no-o. According to the later Japanese poets, there grows in the moon a cassia-tree (*katsura*), whose reddening leaves cause its brighter refulgence in autumn. They also tell us of a great city in the moon (*tsuki no miyako*), and the myth-makers have brought down a maiden from the moon to do penance on earth amid various picturesque scenes. But the genuinely popular imagination of the present day allows only of a hare in the moon, which keeps pounding away at rice in a mortar to make into cakes. The idea of the hare was borrowed from China; but the rice-cakes seem to be native, and to have their origin in a pun—the same word *mochi* happening to have the two acceptations of “rice-cake” and “full moon.” The sun is supposed to be inhabited by a three-legged crow,—also a Chinese idea. Hence the expression *kin-u gyoku-to*, “the golden crow and the jewelled hare,” is a periphrasis for the sun and moon.

Far more important than the sun to esthetic persons is the moon. Of all subjects, this is the one on which Japanese poets

and romance writers most constantly dwell. One of them emphatically asserts that "all griefs can be assuaged by gazing at the moon." The greatest nights of the lunar year are the 26th of the 7th moon, the 15th of the 8th moon, and the 13th of the 9th moon, old calendar, which roughly correspond to dates some five or six weeks later according to our calendar, and thus include the three moons of the autumn trimester. On the 26th night of the 7th moon, people in Tōkyō visit the tea-houses at Atago-yama or those on the sea-shore of Takanawa, and sit up till a very late, or rather early, hour to see the moon rise over the water, drinking *sake* the while, and composing verses appropriate to the sentimental character of the scene. The 15th night of the 8th moon, which is no other than our harvest moon at the full, is celebrated by an offering of beans and dumplings and of bouquets of eulalia-grass and lespedeza blossom. This moon is termed the "bean moon." The 13th night of the 9th moon sees offerings of the same bouquets, of dumplings, and of chestnuts. It is termed the "chestnut moon."

The stars are much less admired and written about in Japan than in Europe. No Japanese bard has ever apostrophised them as "the poetry of heaven." The only fable worth mentioning here in connection with the stars is that which inspires the festival named *Tanabata*. This fable, which is of Chinese origin, relates the loves of a Herdsman and a Weaving-Girl. The Herdsman is a star in Aquila. The Weaver is the star Vega. They dwell on opposite sides of the "Celestial River," or Milky Way, and may never meet but on the 7th night of the 7th moon, a night held sacred to them, strips of paper with poetic effusions in their honour being stuck on stems of bamboo grass and set up in various places. According to one version of the legend, the Weaving-Girl was so constantly kept employed in making garments for the offspring of the Emperor of Heaven—in other words, God—that she had no leisure to attend to the adornment of her person. At last

however, God, taking compassion on her loneliness, gave her in marriage to the Herdsman who dwelt on the opposite bank of the river. Hereupon the woman began to grow remiss in her work. God, in his anger, then made her recross the river, at the same time forbidding her husband to visit her oftener than once a year. Another version represents the pair as mortals, who were wedded at the early ages of fifteen and twelve, and who died at the ages of a hundred and three and ninety-nine respectively. After death, their spirits flew up to the sky, where the Supreme Deity bathed daily in the Celestial River. No mortals might pollute it by their touch, except on the 7th day of the 7th moon, when the Deity, instead of bathing, went to listen to the chanting of the Buddhist scriptures.

**Swords.** The Japanese sword of ancient days (the *tsurugi*) was a straight, double-edged, heavy weapon some three feet long, intended to be brandished with both hands. That of mediæval and modern times (the *katana*) is lighter, shorter, has but a single edge, and is slightly curved towards the point. There is also the *wakizashi*, or dirk of about nine and a half inches, with which *harakiri* was committed. The four most famous Japanese sword-smiths are Munechika (10th century), Masamune and Yoshimitsu (latter part of the 13th century), and Muramasa (latter part of the 14th century). But Muramasa's blades had the reputation of being unlucky. Towards the close of the fifteenth century arose schools of artists in metal, who made it their business to adorn the hilt, the guard, the sheath, and other appurtenances in a manner which is still the delight of collectors. But to the Japanese connoisseur, the great treasure is always the blade itself, which has been called "the living soul of the *samurai*."

Japanese swords excel even the vaunted products of Damascus and Toledo. To cut through a pile of copper coins without nicking the blade is, or was, a common feat. History, tradition, and romance alike re-echo with the exploits of this

wonderful weapon. The magic sword and the sword handed down as an heirloom figure as plentifully in the pages of Japanese novel-writers as magic rings and strawberry-marks used once upon a time to do in the West. The custom which obtained among the *samurai* of wearing two swords, is believed to date from the beginning of the fourteenth century. It was abolished by an edict issued on the 28th March, 1876, and taking effect from the 1st January, 1877. The edict was obeyed by this strangely docile people without a blow being struck, and the curio-shops displayed heaps of swords which, a few months before, the owners would less willingly have parted with than with life itself. Shortly afterwards, a second edict appeared, rescinding the first and leaving *any one* at liberty to wear what swords he pleased. But as the privilege of a class distinction was thus obliterated, none cared to avail themselves of the permission, and the two-sworded Japanese gentleman is now extinct.

Excellent specimens of swords and scabbards may be seen at Tōkyō in the *Yūshū-kan*, or Museum of Arms, situated in the grounds of the Shōkonsha temple.

Japanese swords are made of soft, elastic, magnetic iron combined with hard steel. "The tempering of the edge," says Rein, "is carefully done in the charcoal furnace, the softer backs and the sides being surrounded up to a certain point with fire-clay, so that only the edge remains outside. The cooling takes place in cold water. It is in this way that the steeled edge may be distinguished clearly from the back, by its colour and lustre. The backs of knives, axes, and other weapons are united to the steel edge either by welding on one side, or by fitting the edge into a fluted groove of the back blade, and welding on both sides."

**Taste.** Japanese taste in painting, in house decoration, in all matters depending on line and form, may be summed up in one word—sobriety. The bluster which mistakes bigness for greatness, the vulgarity which smothers beauty under ostentation and extravagance, have no place in the Japanese way of thinking. The alcove of a Tōkyō or Kyōto drawing-room holds one picture and one flower-vase, which are changed from time to time. To be sure, picture and vase are alike exquisite. The possessions of the master of the house are not sown broadcast, as much as to say, “Look what a lot of expensive articles I’ve got, and just think how jolly rich I must be!” He does not stick up plates on walls;—plates are meant to hold food. He would not, whatever might be his means, waste £1000, or £100, or even £20, on the flowers for a single party:—flowers are simple things, perishable things; it is incongruous to lavish on them sums that would procure precious stones for heirlooms. And how this moderation makes for happiness! The rich not being blatant, the poor are not abject; in fact, though poverty exists, pauperism does not. A genuine spirit of equality pervades society.

When will Europe learn afresh from Japan that lesson of proportion, of fitness, of sobriety, which Greece once knew so well? When will America learn it,—the land our grandfathers used to credit with republican simplicity, but which we of the present age have come to connect with the idea of a bombastic luxury, comparable only to the extravagances of Rome when Rome’s moral fibre was beginning to be relaxed?

But it seems likely that instead of Japan’s converting us, we shall pervert Japan. Contact has already tainted the dress, the houses, the pictures, the life generally, of the upper class. It is to the common people that one must now go for the old tradition of sober beauty and proportion. You want flowers arranged? Ask your house-coolie. There is something wrong in the way the garden is laid out? It looks too formal, and yet your pro-

posed alterations would turn it into a formless maze? Call in the cook or the washerman as counsellor.

To tell the whole truth, however, the Japanese have not escaped the defects of their qualities. Their sobriety tends to degenerate into littleness. Grandeur in any shape, rugged mountain ranges, the storm-tossed sea, wide sweeps of moorland, make no deep impression on them. They love to expatiate on the natural beauties of their country. Nevertheless, with so much to choose from, their taste in almost every instance singles out views of limited extent and a kind of polished loveliness partly dependent on human aid. In short, they admire scenes, not scenery. He who has visited Matsushima, the "Plains of Heaven" near Yokohama, or any other widely celebrated spot, will appreciate what we mean. Again, they do not set their houses on heights commanding distant prospects. They build preferably on the flat or in a hollow, where the fence of their dainty garden shuts off the outer world.

**Tattooing.** Long before Japan was sufficiently civilised to possess any records of her own, Chinese travellers noted down their impressions of this "mountainous island in the midst of the ocean." One, writing early in the Christian era, gives various interesting scraps of information,—among others that "the men all tattoo their faces and ornament their bodies with designs, differences of rank being indicated by the position and size of the patterns." But from the dawn of regular history far down into the middle ages, tattooing seems to have been confined to criminals. It was used as branding was formerly used in Europe, whence probably the contempt still felt for tattooing by the Japanese upper classes. From condemned desperadoes to braves at large is but a step. The swashbucklers of feudal times took to tattooing, apparently because some blood and thunder scene of adventure, engraven on their chest and limbs, helped to give them a terrific air when stripped for any reason of their clothes. Other classes whose avocations led them to

baring their bodies in public followed suit,—the carpenters, for instance, and running grooms (*bettō*) ; and the tradition remained of ornamenting almost the entire body and limbs with a hunting, theatrical, or other showy scene. A poor artisan might end by spending as much as a hundred dollars on having himself completely decorated in this manner. Of course he could not afford to pay such a sum down at once ; so he was operated on by degrees through a term of years, as money was forthcoming.

Soon after the revolution of 1868, a thunderbolt fell out of a clear sky. The Government made tattooing a penal offence. Some official, it would seem, had got hold of the idea that tattooing was a barbarous practice which would render Japan contemptible in the eyes of Europe ; and so tattooing, like cremation, was summarily interdicted. Europe herself then came to the rescue, in the shape of the two sons of the Prince of Wales, who visited Japan in 1881, and who, learning that globe-trotters had sometimes managed surreptitiously to engage a tattooer's services, did the like with excellent effect, Prince George (now Duke of York) being appropriately decorated on the arm with a dragon. From that time forward, no serious effort has been made to interfere with the tattooer's art ; and in the hands of such men as Hori Chiyo and Hori Yasu\* it has become an art indeed,—an art as vastly superior to the ordinary English sailor's tattooing as Heidsieck Monopole is to small beer. Birds, flowers, landscapes of marvellous finish and beauty—thoroughly Japanese withal in style and conception—are now executed, some specimens being so minute as almost to render the aid of a microscope necessary in order properly to appreciate them.

The principal materials used are sepia and vermilion,—the former for the outline and ground, the latter for touching up and picking out special details, for instance, a cock's crest. A brown

---

\* The name, or nickname Hori is from *hori-mono*, "tattooing," itself derived from the verb *horu*, "to dig," hence "to engrave," and *mono*, "a thing."

colour is occasionally produced by the use of Indian red. Prussian blue may also be employed, but is considered dangerous. The needles are all of steel, the finest being used to pick in the outlines, the thicker ones for shading. There are four sizes in all. The most delicate work takes only three needles; but ordinary outlines require a row of from four to nine needles. Shading is done by means of superposed rows of needles tied together, as, for instance, five, four, and three, making twelve in all, and so on up to as many as sixty. In such cases the thickest needles are employed. The needles are always spliced to a bone handle by means of a silken thread; and this handle is held in the right hand leaning on the left, somewhat as a billiard cue is held. Though an appreciable fraction of the total length of the needles protrudes beyond the splicing, blood is rarely drawn, so skilfully is the instrument manipulated.

The most recent refinement of the art is the use of cocaine, either as a wash or mixed with the sepia. But the pain, on an ordinarily fleshy arm, is not acute enough for most persons to care to avail themselves of it. Smooth arms are the best to operate on, hairiness being apt to make the colour run.

**Tea.** Tea is believed to have been introduced into Japan from China in A.D. 805 by the celebrated Buddhist saint, Dengyō Daishi. It had long been a favourite beverage of the Buddhists of the continent, whom it served to keep wakeful during their midnight devotions. A pious legend tells us that the origin of the tea-shrub was on this wise. Daruma (Dharma), an Indian saint of the sixth century, had spent many long years in ceaseless prayer and watching. At last one night, his eyelids, unable to bear the fatigue any longer, closed, and he slept soundly until morning. When the saint awoke, he was so angry with his lazy eyelids that he cut them off and flung them on the ground. But lo! each lid was suddenly transformed into a shrub, whose efficacious leaves, infused in water, minister to the vigils of holy men.

Though encouraged from the first by Imperial recommendations, tea-culture made little or no progress in Japan till the close of the twelfth century, when another Buddhist, the abbot Myōe, having obtained new seeds from China, sowed them at Togano-o, near Kyōto, whence a number of shrubs were afterwards transplanted to Uji, which has ever since been the chief centre of Japanese tea-growing. Thenceforward the love of tea-drinking was engrained in the Japanese court and aristocracy, and the *cha-no-yu*, or tea ceremonies, became a national institution. But it is doubtful whether the custom of drinking tea began to spread among the lower classes till the end of the seventeenth century, which was also the time when our own ancestors first took to it.

The tea-plant belongs to the same family of evergreens as the camellia, and bears small white flowers slightly fragrant. As a rule, the seeds are planted in terraces on gentle hill slopes; but level ground may also be availed of, provided it be kept thoroughly drained. The shrub is not allowed to attain a height of more than three or four feet. It is ready for picking in the third year, but is at its best from the fifth to the tenth year. The first picking takes place at the end of April or beginning of May, and lasts three or four weeks. There is a second in June or July, and sometimes a third.

As soon as possible after being picked, the leaves are placed in a round wooden tray with a brass wire bottom over boiling water. This process of steaming, which is complete in half a minute, brings the natural oil to the surface. The next and principal operation is the firing, which is done in a wooden frame with tough Japanese paper stretched across it, charcoal well-covered with ash being the fuel employed. This first firing is done at a temperature of about 120° Fahrenheit. Meanwhile the leaf is manipulated for hours by men who roll it into balls with the palms of their hands. The final result is that each leaf becomes separately twisted, and changes its colour to dark olive purple. Two more firings at lower temperatures ensue, after

which the leaf is allowed to dry until it becomes quite brittle. Sometimes—and we believe this to have been the common practice in ancient days—the leaf is not fired at all, but only sun-dried.

All genuine Japanese tea is what we should term “green.” It is partaken of, not only at meal-times, but also at intervals throughout the day. The cups are very small, and no milk or sugar is added. The tea drunk in respectable Japanese households generally costs about 25 cents a pound, while from 50 cents to \$1 will be paid for a better quality, fit to set before an honoured guest. First-class Uji tea costs \$6 per pound. We have even heard of \$12 being charged for an exceptionally fine sample. At the opposite end of the scale stands the so-called *bancha*, the tea of the lower classes, 5 cents a pound, made out of chopped leaves, stalks, and bits of wood taken from the trimmings of the tea-plant; for this beverage is tea, after all, little as its flavour has in common with that of Bohea or of Uji. Other tea-like infusions sometimes to be met with are *kōsen*, made by pouring hot water on a mixture of various fragrant substances, such as orange-peel, the seeds of the xanthoxylon, etc.; *sakura-yu*, an infusion of salted cherry-blossoms; *mugi-yu*, an infusion of parched barley; *mame-cha*, a similar preparation of beans. *Fuku-ja*, or “luck tea,” is made of salted plums, sea-weed, and xanthoxylon seeds, and is partaken of in every Japanese household on the last night of the year.

Japanese tea, unlike Chinese, must not be made with boiling water, or it will give an intolerably bitter decoction; and the finer the quality of the tea, the less hot must be the water employed. The Japanese tea equipage actually includes a small open jug called the “water-cooler” (*yu-zamashi*), to which the hot water is, if necessary, transferred before being poured on the tea-leaves. Even so, the first brew is often thrown away as too bitter to drink. The consequence of this is that Japanese servants, when they first come to an English house, always

have to be taught how to treat our Chinese or Indian tea, and generally begin by giving practical proof of their incredulity on the subject of the indispensable virtue of boiling water.

Large quantities of Japanese tea—as much as 40,000,000 lbs. in a single season—are sent across the Pacific to the United States and Canada. What a change in the course of a single life-time! It is but five-and-forty years since an enterprising widow of Nagasaki, named Ōura, made the first surreptitious shipment of 27 lbs, for no intercourse was then permitted with the hated barbarian.

**Books recommended.** *The Preparation of Japan Tea*, by Henry Gribble, printed in Vol. XII. Part I. of the “*Asiatic Transactions*.”—*Rein's Industries of Japan*, p. 110 *et seq*

**Tea Ceremonies.** Few things have excited more interest among collectors of Japanese curios than the *cha-no-yu*, or tea ceremonies, of which so many of the highly prized little “japanosities” in their collections are in one way or another the implements. And as quarrelling with other collectors is part of every true collector's nature, so also has the battle raged round the Japanese tea-table—a veritable and literal storm in a tea-cup. One set disparages the tea ceremonies as essentially paltry and effeminate, and asserts that their influence has cramped the genius of Japanese art, by confusing beauty with archaism and making goals of characteristics worthy only to be starting-points. The opposite school sees in these same ceremonies a profoundly beneficial influence—an influence which has kept Japanese art from leaving the narrow path of purity and simplicity for the broad road of a meretricious gaudiness.

What, then, are these tea ceremonies? And first of all, what is their history? Have their votaries at all epochs been enamoured of simplicity and archaism to the degree which both friends and foes seem to take for granted? If our own slight researches into the subject prove anything, they prove that these traits are comparatively modern.

The tea ceremonies have undergone three transformations during the six or seven hundred years of their existence. They have passed through a medico-religious stage, a luxurious stage, and lastly an esthetic stage. They originated in tea-drinking pure and simple on the part of certain Buddhist priests of the Zen sect, who found the infusion useful in keeping them awake during the performance of their midnight devotions. The first aristocrat whose name is mentioned in connection with tea is Minamoto-no-Sanetomo, Shōgun of Japan from A.D. 1203 to 1218. He seems to have been a youthful debauchee, whom the Buddhist abbot Eisai endeavoured to save from the wine-cup by making him try tea instead. As is still the custom of propagandists, Eisai accompanied this recommendation by the gift of a tract on the subject. It was composed by himself, and bore the title of "The Salutary Influence of Tea-Drinking." In it was explained the manner in which tea "regulates the five viscera and expels evil spirits," and rules were given both for making the infusion and for drinking it. The ceremonial which Eisai introduced was religious. True, it comprised a simple dinner; but its main feature was a Buddhist service, at which the faithful worshipped their ancestors to the beating of drums and burning of incense. A tinge of the religious element has adhered to the tea ceremonies ever since. It is still considered proper for tea enthusiasts to join the Zen sect of Buddhism, and it is from the abbot of Daitokuji at Kyōto that diplomas of proficiency are obtained.

How long Japanese tea-drinking remained in this first religious stage is not clear. This we know, that by the year 1330, the second or luxurious stage had already been reached. The descriptions of the tea-parties of those days remind one of the "Arabian Nights." The Daimyōs who daily took part in them reclined on couches spread with tiger-skins and leopard-skins. The walls of the spacious apartments in which the guests assembled were hung, not only with Buddhist pictures, but with

damask and brocade, with gold and silver vessels, and swords in splendid sheaths. Precious perfumes were burnt, rare fishes and strange birds were served up with sweetmeats and wine, and the point of the entertainment consisted in guessing where the material for each cup of tea had been produced; for as many brands as possible were brought in, to serve as a puzzle or *jeu de société*—some from the Toga-no-o plantations, some from Uji, some from other places. Every right guess procured for him who made it the gift of one of the treasures that were hung round the room. But he was not allowed to carry it away himself. The rules of the tea ceremonies, as then practised, ordained that all the things rich and rare that were exhibited must be given by their winners to the singing and dancing-girls, troupes of whom were present to help the company in their carousal. Vast fortunes were dissipated in this manner. On the other hand, the arts were benefited, more especially when, towards the close of the fifteenth century, the luxurious Yoshimasa, a sort of Japanese Lorenzo de' Medici, abdicated the Shōgun's throne in order to devote himself altogether to refined pleasures in his gorgeous palace of Ginkakuji at Kyōto, in the company of his favourites, the pleasure-loving Buddhist abbots Shukō and Shinnō. From this trio of royal and religious voluptuaries are derived several of the rules for tea-drinking that still hold good. The tiny tea-room of only four and a half mats (nine feet square) apparently dates from then. Shinnō was a great connoisseur of antiquities and of what we now term curios. He was also the first to manufacture a certain kind of tea-spoon, whence arose the custom of tea-fanciers manufacturing their own spoons.

All through the fifteenth and sixteenth centuries, the tea ceremonies continued to enjoy the unabated favour of the Japanese upper classes. The gift of some portion of a tea-service, such as a bowl or cup, was the most valued mark of condescension which a superior could bestow. We read of high-

born warriors neglecting their sword for the sake of the tea-pot and of their being cashiered therefor, of others dying bowl in hand when their castles were taken by the enemy, or sending their tea-things away privately as their chiefest treasure. Nobunaga and Hideyoshi, two of the greatest military rulers of Japan, were both enthusiastic votaries of the tea ceremonies. Hideyoshi probably gave the largest tea-party on record, the card of invitation being in the form of an official edict which is still preserved. All the lovers of tea in the empire were, by this singular document, summoned to assemble at a certain date under the pine grove of Kitano, near Kyōto, and to bring with them whatever curios connected with tea-drinking they possessed, it being further decreed that all such as failed to respond to the summons should be debarred from ever taking part in the tea ceremonies again. This was in the autumn of 1587, the time when the Invincible Armada was being equipped for the ceremonies of war. The tea-party seems to have been successful. It lasted ten days, and Hideyoshi fulfilled his promise of drinking tea at every booth. The tenants of some of the booths were noblemen, of others traders or peasants;—for all were invited regardless of birth, a proof that the custom had begun to filter down into the lower strata of society.

A few years later, in 1594, Hideyoshi called together at his palace of Fushimi the heads of all the various schools into which, by this time, the art of tea-drinking had split up. Chief among these was Sen-no-Rikyū, a name which every Japanese enthusiast reveres—for he it was, or at least he principally, who collated, purified, and (so to say) codified the tea ceremonies, stamping them with the character which they have borne ever since. Simplicity had long been commanded by the poverty of the country, exhausted as it was by ages of warfare. He took this simplicity up, and raised it into a canon of taste as imperative as the respect for antiquity itself. The worship of simplicity and of the antique in objects of art,

together with the observance of an elaborate code of etiquette—such are the doctrine and discipline of the tea ceremonies in their modern form, which has never varied since Sen-no-Rikyū's day. Though not the St. Paul of the tea cult, he was thus its Luther. Unfortunately he was a Luther not indifferent to money. He abused his unrivalled skill as a connoisseur of curios to enrich himself and to curry favour with the great. Hideyoshi at last detected his venality and fraud, and caused him to be put to death.

The ceremonies themselves have often been described. They include a preliminary dinner, but tea-drinking is the chief thing. The tea used is in the form, not of tea-leaves, but of powder, so that the resulting beverage resembles pea-soup in colour and consistency.\* There is a thicker kind called *koi-cha*, and a thinner kind called *usu-cha*. The former is used in the earlier stage of the proceedings, the latter towards the end. The tea is made and drunk in a preternaturally slow and formal manner, each action, each gesture being fixed by an elaborate code of rules. Every article connected with the ceremony, such as the tea-canister, the incense-burner, the hanging scroll, and the bouquet of flowers in the alcove is either handled, or else admired at a distance, in ways and with phrases which unalterable usage prescribes. Even the hands are washed, the room is swept, a little bell is rung, and the guests walk from the house to the garden and from the garden back into the house, at stated times and in a stated manner which never varies, except in so far as certain schools, as rigidly conservative as monkish confraternities, obey slightly varying rules of their own, handed down from their ancestors who interpreted Sen-no-Rikyū's ordinances according to slightly varying canons of exegesis.

---

\* Foreign *gourmets* resident in Japan have discovered that a delicious ice-cream can be made out of it.

To a European the ceremony is lengthy and meaningless. When witnessed more than once, it becomes intolerably monotonous. Not being born with an Oriental fund of patience, he longs for something new, something lively, something with at least the semblance of logic and utility. But then it is not for him that the tea ceremonies were made. If they amuse those for whom they were made, they amuse them, and there is nothing more to be said. In any case, tea and ceremonies are perfectly harmless, which is more than can be affirmed of tea and tattle. No doubt, even the tea ceremonies have, if history libels them not, been sometimes misused for purposes of political conspiracy. But these cases are rare. If the tea ceremonies do not go the length of embodying a "philosophy," as fabled by some of their foreign admirers, they have, at least in their latest form, assisted the cause of purity in art. Some may deem them pointless. None can stigmatise them as vulgar.

**Telegraphs.** The first line of telegraphs in this country may be said to have been experimental; it was only 840 yards in length, and was opened for government business in 1869. During the following year Tōkyō and Yokohama, and Ōsaka and Kōbe, respectively, were connected by wire, and a general telegraphic system for the empire was decided on; but the necessary material and a staff of officers did not reach Japan until the end of 1871. The line from Tōkyō to Kōbe was completed and opened for traffic in the year 1872, and to Nagasaki in 1873.

On the introduction of telegraphy into Japan, a code was devised on the basis of the well-known "Morse code," which admitted of internal telegrams being written and transmitted in the vernacular. In that respect, as in so many others, Japan is unique among Eastern countries. The new means of communication being thus placed within reach of the bulk of the people, it soon became familiar and popular. In India and China, for instance, telegrams can be transmitted only when written in Roman letters or in Arabic figures.

The first lines were surveyed, built, and worked under foreign superintendence, with fittings principally of English manufacture. But the rapid progress made by the Japanese in technical matters has enabled them to dispense with foreign experts. With the exception of submarine cables, iron and covered wires, and the most delicate measuring apparatus, all kinds of material and instruments are turned out of the Japanese workshops, while executively the system has been maintained solely by the native staff for some years past. Submarine cables connect all the principal islands of the empire, even recently acquired Formosa. Duplicate cables, belonging to the Great Northern Telegraph Company, connect Japan with Shanghai on the one hand, and Vladivostock on the other. There is also one to Fusan in Korea, worked by the Japanese Government.

The tariff for native messages, which was framed on a very low basis, has met with excellent results. To-day it is probably under that of any other country in the world. The rate for a single message of ten *kana* characters to any part of the empire is 15 *sen*—three-pence three-farthings—with 10 *sen*, two-pence half-penny, for every following ten *kana*; for city local traffic it is only 5 *sen* or one-penny farthing, with 3 *sen* for every following ten *kana*. The names and addresses of the sender and receiver go free. Telegrams in foreign languages within the empire are charged at the rate of 5 *sen* per word, with a minimum charge of 25 *sen*, six-pence farthing, for the first five words or fraction of five words, but addresses count. For city local traffic it is only 2 *sen* per word, with a minimum charge of 10 *sen*.

The number of offices open for public business at the present time is 1,123. Telephone exchanges have been introduced in some of the larger towns. In Tōkyō there are now upwards of 2,000 subscribers. The length of wire open at the end of 1896 was 38,252 miles. The number of messages conveyed during

that year was a little above ten and a half millions, of which over 94 per cent in thenative tongue.

**Theatre.** The Japanese theatre claims a peculiar importance, as the only remaining place where the life of Old Japan can be studied in these radical latter days. The Japanese drama, too, has an interesting history. It can be traced back to religious dances of immemorial antiquity, accompanied by rude choric songs. An improvement was made in these dances at the beginning of the fifteenth century, when some highly cultivated Buddhist priests and the pleasure-loving Shōgun Yoshimasa took the matter in hand. Edifices—half dancing-stage, half theatre—were built for the special purpose of representing these *Nō*, as the performances were called; and though the chorus remained, a new interest was added in the shape of two individual personages, who moved about and recited portions of the poem in a more dramatic manner. The result was something strikingly similar to the old Greek drama. The three unities, though never theorised about, were strictly observed in practice. There was the same chorus, the same stately demeanour of the actors, who were often masked; there was the same sitting in the open air, there was the same quasi-religious strain pervading the whole. We say “was;” but happily the *Nō* are not yet dead. Though shorn of much of the formality and etiquette which surrounded them in earlier days, representations are still given by families who have handed down the art from father to son for four hundred years. There is no scenery, but the dresses are magnificent. Even the audience, composed chiefly of noblemen and ladies of rank, is a study. They come, not merely to be amused, but to learn, and they follow the play, book in hand; for the language used, though beautiful, is ancient and hard of comprehension, especially when chanted. The music is—well, it is Oriental. Nevertheless, when due allowance has been made for orientalism and for antiquity, it has a certain weird charm. Each

piece takes about an hour to act. But the entire performance occupies the greater part of a day, as five or six pieces are given, the intervals between them being filled up by comediettas, whose broad fun, delivered in old-fashioned colloquial, serves as a foil to the classic severity of the chief plays.

From the *Nō* theatres of the high born and learned to the *Shibai* or *Kabuki* theatres of the common people is a great descent, so far as taste and poetry are concerned, though the interest of the more vulgar exhibitions, viewed as pictures of manners—not in the world of gods and heroes, but in that of ordinary Japanese men and women—will be of greater to far foreign spectators. The plays given at these theatres originated partly in the comediettas just mentioned, partly in marionette dances accompanied by explanatory songs, called *jōruri* or *gidayū*. This explains the retention of the chorus, although in diminished numbers and exiled to a little cage separated from the stage, where they sit with the musicians. Hence, too, the peculiar poses of the actors, originally intended to imitate the stiffness of their prototypes, the marionettes. It was in the sixteenth century that this class of theatre took its rise. Oddly enough, though the founders of the modern Japanese stage were two women, named O-Kuni and O-Tsū, men alone have been allowed to act at the chief theatres, the female parts being taken by males, as in our own Shakspeare's age. It would seem that immorality was feared from the joint appearance of the two sexes, and in sooth the reputation of O-Kuni and her companions was far from spotless.\*

---

\* Mr. Lafcadio Hearn, writing to us to remonstrate on this reference to O-Kuni as needlessly severe, gives her story, which is, as he says, both picturesque and touching. It may be taken as typical of a whole class of Japanese love tales:—

"She was a priestess in the great temple of Kitsuki, and fell in love with a swashbuckler named Nagoya Sanza, with whom she fled away to Kyōto. On the way thither, her extraordinary beauty caused a second swashbuckler to become enamoured of her. Sanza killed him, and the dead man's face never ceased to haunt the girl. At Kyōto she supported her

From the beginning, plays were divided into two classes, called respectively *jidai-mono*, that is historical plays, and *sewa-mono*, or comedies of manners. Chikamatsu Monzaemon and Takeda Izumo, the most celebrated of Japanese dramatists, divided their attention equally between the two styles. It may be worth mentioning that both these authors belonged to the eighteenth century, and that both of them dramatised the vendetta of the "Forty-Seven Ronins." But Chikamatsu's most famous piece is one founded on the piratical adventures of Kokusen-ya, who expelled the Dutch from Formosa in the time of Charles II. The Japanese *Kabuki* theatres are amply provided with scenery and stage properties of every description. One excellent arrangement is a revolving centre to the stage, which allows of a second scene being set up behind while the first is in course of acting. On the conclusion of the first, the stage revolves, carrying away with it actors, scenery, and all; and something entirely different greets the spectators' eyes without a moment's waiting.

The *Nō* actors were honoured under the old *régime*, whilst the *Kabuki* actors were despised. The very theatres in which they appeared were looked down on as places too vile for any gentleman to enter. Such outcasts were actors at the time that, when a census was taken, they were spoken of with the numerals used in counting animals, thus *ippiki*,

---

lover by dancing the sacred dances in the dry bed of the river. Then the pair went to Yedo and began to act. Sanza himself became a famous actor. After her lover's death O-Kuni returned to Kitsuki, where, being an excellent poetess, she supported or at least occupied herself by giving lessons in the art. But afterwards she shaved off her hair and became a nun, and built a little temple in Kitsuki where she lived and taught. And the reason why she built the temple was that she might pray for the soul of the man whom the sight of her beauty had ruined. The temple stood until thirty years ago; but there is now nothing left of it but a broken statue of the compassionate god Jizō. The family still live at Kitsuki; and until the late revolution the head of the family was always entitled to a share in the profits of the local theatre, because his ancestress, the beautiful priestess, had founded the art."

*ni-hiki*, not *hitori*, *futari*. Those to whom Japanese is familiar will appreciate the terrible sting of the insult.\* But these actors formed the delight of the shopkeeping and artisan classes, and they supplied to whole generations of artists their favourite objects of study. Most of the lovely old colour prints representing frail beauties and other heroines were taken, not from the ladies themselves, but from the impersonation of them on the boards by actors of the male sex.

With the revolution of 1868, customs changed and class prejudices were much softened. Actors are ostracised no longer. Since 1886, there has been a movement among some of the leaders of Japanese thought towards the reform of the stage, Europe being of course looked to for models. No tangible result seems, however, to have been produced as yet. For our own part, though favouring the admittance of actors into Japanese good society, if their manners fit them for such promotion, we trust that the stage may remain, in other respects, what it now is—a mirror, the only mirror, of Old Japan. When our fathers invented railways, they did not tear up the “School for Scandal,” or pull down Covent Garden. Why should the Japanese do what amounts to the same thing? The only reform called for is one which touches, not the theatre itself, but an adjunct an excrescence. We mean the tea-houses which serve as ticket agencies, and practically prevent theatre-goers from dealing with the theatre direct. Engrossing, as these parasitical little establishments do, a large portion of the profits derived from the sale of tickets, they are probably the main cause of the frequent bankruptcy of the Tōkyō theatres.

Talking of reform and Europeanisation, it fell to our lot a few years ago to witness an amusing scene in a Japanese theatre. The times were already for change. A small Italian opera

---

\* The reader who knows German will understand what is meant, when we say that it is as if, in speaking of their eating, the word *fressen* should have been used instead of *essen*.

troupe having come to Yokohama, a wide-awake Japanese *impresario* hired them, and caused a play to be written for the special purpose of letting them appear in it. This play represented the adventures of a party of Japanese globe-trotters, who, after crossing the Pacific Ocean and landing at San Francisco where they naturally fall among the Red Indians who infest that remote and savage locality, at last reach Paris and attend a performance at the Grand Opéra. Thus were the Italian singers appropriately introduced, Hamlet-like, on a stage upon the main stage. But oh! the effect upon the Japanese audience! When once they had recovered from the first shock of surprise, they were seized with a wild fit of hilarity at the high notes of the *prima donna*, who really was not at all bad. The people laughed at the absurdities of European singing till their sides shook and the tears rolled down their cheeks; and they stuffed their sleeves into their mouths, as we might our pocket-handkerchiefs, in the vain endeavour to contain themselves. Needless to say that the experiment was not repeated. The Japanese stage betook itself to its wonted sights and sounds, and the Japanese play-going public was again happy and contented.

Japan's greatest living actor is Ichikawa Danjūrō. All visitors to Tōkyō should endeavour to witness an exhibition of this aged artist's rare histrionic power and his marvellous agility as a dancer. The family has been eminent in the same line for nine generations. Among other noted actors, Kikugorō, Sadanji, Fukusuke, and Kawakami call for special mention.

**Books recommended.** For the *Nō* dramas and comediettas, see *The Classical Poetry of the Japanese*. The *Kabuki*, or ordinary theatre, has not yet received thorough treatment at European hands. McClatchie's *Japanese Plays Versified* are, however, capital English pieces in "In-goldsby Legend" style on some of the chief subjects treated by the Japanese dramatists. There is also an English translation of the *Chūshingura*, or play of the "Forty-Seven Rōnins," by F. V. Dickins.

**Time.** Official and educated Japan is now entirely European and commonplace in her manner of reckoning time. Inquisitive persons may, however, like to take a peep at her

earlier and more peculiar methods, which are still followed by the peasantry of certain remote districts. Old Japan had no minutes, her hours were equivalent to two European hours, and they were counted thus, crab-fashion :—

9 o'clock (*kokonotsu-doki*), our 12 o'clock A.M. and P.M.

8 o'clock (*yatsu-doki*),       ,,   2   ,,       ,,       ,,       ,,

7 o'clock (*nanatsu-doki*),   ,,   4   ,,       ,,       ,,       ,,

6 o'clock (*mutsu-doki*),       ,,   6   ,,       ,,       ,,       ,,

5 o'clock (*itsutsu-doki*),   ,,   8   ,,       ,,       ,,       ,,

4 o'clock (*yotsu-doki*),       ,, 10   ,,       ,,       ,,       ,,

Half-past-nine (*kokonotsu han*) was equivalent to our one o'clock, and similarly in the case of all the other intermediate hours, down to half-past-four which was equivalent to our eleven o'clock. But the hours were never all of exactly the same length, except at the equinoxes. In summer those of the night were shorter, in winter those of the day. This was because no method of obtaining an average was used, sunrise and sunset being always called six o'clock throughout the year. Why, it will be asked, did they count the hours backwards? A case of Japanese topsy-turvydom, we suppose. But then why, as there were six hours, not count from six to one, instead of beginning at so arbitrary a number as nine? The reason is this:—three preliminary strokes were always struck, in order to warn people that the hour was about to be sounded. Hence if the numbers one, two, and three had been used to denote any of the actual hours, confusion might have arisen between them and the preliminary strokes,—a confusion analogous to that which, in our own still imperfect method of striking the hour, leaves us in doubt whether the single stroke we hear be half-past twelve, one o'clock, half-past-one, or any other of the numerous half-hours.

The week was not known to Old Japan, nor was there any popular division roughly corresponding to it. Early in the present reign, however, there was introduced what was called

the *Ichī-Roku*, a holiday on all the ones and sixes of the month. But this arrangement did not last long. Itself borrowed from our Sunday, the copy soon gave way to the original. Sunday is now kept as a day of rest from official work, and of recreation. Even the modern English Saturday half-holiday has made its way into Japan. Sunday being in vulgar parlance *Dontaku*,\* Saturday is called (in equally vulgar parlance) *Han-don*, that is, "half-Sunday."

But to return to Old Japan. Her months were real moons, not artificial periods of thirty or thirty-one days. They were numbered one, two, three, four, and so on. Only in poetry did they bear proper names, such as January, February, and the rest are in European languages. The year consisted of twelve such months, with an intercalary one whenever New Year would otherwise have fallen a whole moon too early. This happened about once in three years. Japanese New Year took place late in our January or in the first half of February; and that, irrespective of the state of the temperature, was universally regarded as the beginning of spring. Snow or no snow, the people laid aside their wadded winter gowns. The plum-blossoms, at least, were always there to prove that spring had come; and if the nightingale was yet silent, that was not the Japanese poets' fault, but the nightingale's.

Besides the four great seasons of spring, summer, autumn, and winter, there were twenty-four minor periods (*sekki*) of some fifteen days each, obtained by dividing the real, or approximately real, solar year of three hundred and sixty-five days by twenty-four. These minor periods had names, such as *Rissun*, "Early Spring;" *Kan'o*, "Cold Dew;" *Shōkan*, "Lesser Cold;" *Daihan*, "Greater Cold." In addition to this, years, days, and hours were all accounted as belonging to one of the signs of the zodiac (Jap. *jū-ni-shi*), whose order is as follows:—

---

\* A corruption of the Dutch *Zondag*.

1 <i>Ne</i> ,*	the Rat.	7 <i>Uma</i> ,	the Horse.
2 <i>Ushi</i> ,	„ Bull.	8 <i>Hitsuji</i> ,	„ Goat.
3 <i>Tora</i> ,	„ Tiger.	9 <i>Saru</i> ,	„ Ape.
4 <i>U</i> ,	„ Hare.	10 <i>Tori</i> ,	„ Cock.
5 <i>Tutsu</i> ,	„ Dragon.	11 <i>Inu</i> ,	„ Dog.
6 <i>Mi</i> ,	„ Serpent.	12 <i>I</i> ,	„ Boar.

The Japanese have also borrowed from Chinese astrology what are termed the *jih-kan*, or “ten celestial stems,”—a series obtained by dividing each of the five elements into two parts, termed respectively the elder and the younger brother (*e* and *to*). The following series is thus obtained :—

- 1 *Ki no E*, ... .. Wood—Elder Brother.
- 2 *Ki no To*, .. ... Wood—Younger Brother.
- 3 *Hi no E*, ... .. Fire —Elder Brother.
- 4 *Hi no To*, .. ... Fire —Younger Brother.
- 5 *Tsuchi no E*, ... .. Earth—Elder Brother.
- 6 *Tsuchi no To*, ... .. Earth—Younger Brother.
- 7 *Ka † no E*, ... .. Metal—Elder Brother.
- 8 *Ka no To*,... .. Metal—Younger Brother.
- 9 *Mizu no E*, ... .. Water—Elder Brother.
- 10 *Mizu no To*, ... .. Water—Younger Brother.

The two series—celestial stems and signs of the zodiac—being allowed to run on together, their combination produces the cycle of sixty days or sixty years, as sixty is the first number divisible both by ten and by twelve. The first day or year of the cycle is *Ki no E Ne*, “Wood—Elder Brother, Rat;” the second is *Ki no To Ushi*, “Wood—Younger Brother, Bull;” and so on, until the sixtieth, *Mizu no To I*, “Water—Younger Brother, Boar,” is reached, and the cycle begins again.

---

\* *Ne* is short for *nezumi*, the real word for “rat.” In like manner, *u* stands for *usagi*, and *mi* for *hebi*. *I* is not an abbreviation of *inoshishi*, the modern popular name for a “boar,” but the genuine ancient form of the word.

† Short for *kane*, “metal.”

These things, especially the lunar calendar, still largely influence the daily actions of the people. The peasantry scrupulously observe the traditional times and seasons in all the operations of agriculture. For instance, they sow their rice on the eighty-eighth day (*hachu-jū-hachi ya*) from the beginning of spring (*Risshun*), and they plant it out in *Nyūbai*, the period fixed for the early summer rains. The two hundred and tenth and two hundred and twentieth days (*Ni-hyaku tōka* and *Ni-hyaku hatsuka*) from the beginning of spring, and what is called *Hassaku*, that is, the first day of the eighth moon, old calendar, are looked on as days of special importance to the crops, which are certain to be injured if there is a storm, because the rice is then in flower. They fall early in September, just in the middle of the typhoon season. St. Swithin's day has its Japanese counterpart in the *Kino E Ne*, mentioned above as the first day of the sexagesimal cycle. If it rains then, it will rain for sixty days on end. Again, if it rains on the eighth day of a certain eight-day period called *Hassen*, of which there are six in every year, it will rain for the next eight days. These periods, being movable, may come at any time of the year. On the 6th August, 1891, the greater and the lesser St Swithin's days (*Kino E Ne* and *Hassen no Ake*, or last day of *Hassen*) fell together, than which a more unfortunate coincidence could scarcely be imagined, seeing that the rice was just maturing and needed bright sunshine. The morning was cloudy, and accordingly the *Miyako Shimbun*, one of the Tōkyō newspapers, noticed that there was anxiety on the rice exchange and that quotations rose two or three cents until the afternoon, when, the sky having cleared, prices fell again to the normal level.

We said that official Japan has quite Europeanised herself so far as methods of computing time are concerned. The assertion was too sweeping. Although the Gregorian calendar has been in force ever since the 1st January, 1873, she has not yet been able to bring herself to use the Christian era. Not only would

the use of this era symbolise to the Shintō Court of Japan the supremacy of a foreign religion :—it would be derogatory from a political point of view, the fixing of the calendar from time to time, together with the appointing of “year-names,”\* having ever been looked on in the Far-East as among the inviolable privileges and signs of independent sovereignty, much as coining money is in the West. China has its own year-names, which it proudly imposes on such vassal states as Thibet. Japan has other year-names. The names are chosen arbitrarily. In China the plan was long ago introduced of making each year-name coincide with the reign of an emperor. This has not hitherto been the case in Japan, though an official notification has been issued to the effect that reigns and year-names shall so coincide in future. Either way, the confusion introduced into the study of history may be easily imagined. Hardly any Japanese knows all the year-names even of his own country. The most salient ones are, it is true, employed in conversation, much in the same way as we speak of the sixteenth century or the Georgian era. Such are *Engi* (A.D. 901—923), celebrated for the legislation then undertaken; *Genroku* (1688—1704), a period of great activity in various arts; *Tempō* (1830—1844), the last brilliant period of feudalism before its fall. But no one could say off-hand how many years it is from one of these periods to another. In 1872 an attempt was made to introduce, as the Japanese era from which all dates should be counted, the supposed date of the accession of Jimmu Tennō, the mythical founder of the Imperial line; and this system still has followers. Jimmu’s reign being held to have commenced in the year B.C. 660, all dates thus reckoned exceed by the number six hundred and sixty the European date for the same year. For instance, 1893 is 2558.

The following is a list of the year-names of the present century :—

---

\* In Japanese, *nengō*.

<i>Kyōwa</i> , 1801—1804. <sup>1</sup>	<i>Ansei</i> , 1854—1860.
<i>Bunkwa</i> , 1804—1818.	<i>Man-en</i> , 1860—1861.
<i>Bunsei</i> , 1818—1830.	<i>Bunkyū</i> , 1861—1864.
<i>Tempō</i> , 1830—1844.	<i>Genji</i> , 1864—1865.
<i>Kōkwa</i> , 1844—1848.	<i>Keiō</i> , 1865—1868.
<i>Kaei</i> , 1848—1854.	<i>Meiji</i> , 1868—

The present year, 1898, is the thirty-first year of Meiji. Astrologically speaking, it is Tsuchi no E Inu, "Earth—Elder Brother, Dog."

**Book recommended** *Japanese Chronological Tables*, by William Bramsen. This has an elaborate introduction to the whole subject; and the tables are so arranged as to show, not only the European year, but the exact day to which any Japanese date, from A.D. 645 onwards, corresponds.

**Tobacco.** Tobacco seems to have been introduced into Japan by the Portuguese about the year 1600. Its use was at first strictly prohibited: but by 1651 the law was so far relaxed as to permit smoking, though only out-of-doors. Now there is hardly a man or woman throughout the length and breadth of the land who does not enjoy the fragrant weed; for, as an anonymous author quoted by Sir Ernest Satow sarcastically remarks, "Women who do not smoke and priests who keep the prescribed rules of abstinence, are equally rare."

Of the numerous varieties of Japanese tobacco, the most universally esteemed is *Kokubu*, which is grown in the provinces of Satsuma and Ōsumi; but the plan commonly followed by dealers is to make blends of two or more sorts. Prices vary from 15 cents up to \$1 for 100 *me*, that is, a little less than 1 lb. All Japanese tobacco is light, and consequently well-suited for use in the form of cigarettes. One of the countless ways in which the nation is Europeanising itself is by the adoption of

---

\* It may be asked: Why not take *Kyōwa* as equivalent to 1801—3, *Bunkwa* as equivalent to 1804—17, and so on in every case, instead of counting the final and initial years of each period twice? The reason is that no new name ever came into force on the 1st January. In most cases the year was well-advanced before it was adopted.

cigarette-smoking. But the tiny native pipe—it looks like a doll's pipe—holds its own side by side with the new importation, and will probably continue to do so. (See also Article on PIPES.)

**Book recommended.** *The Introduction of Tobacco into Japan*, by Sir Ernest Satow, printed in Vol. II of the "Asiatic Transactions."

**Tōkyō.** This city, also called Tōkei\* and formerly Yedo, is of comparatively modern origin. Down to the Middle Ages, most of the ground on which it stands was washed by the sea or occupied by lagoons. On the seashore stood, in the fifteenth century, the fishing hamlet of *Ye-do* ("estuary gate"), near which a certain warrior, named Ōta Dōkwan, built himself a fortress in the year 1456. The advantages of the position from a military point of view were discerned by Hideyoshi, who therefore caused his general, Ieyasu, to take possession of the castle; and when Ieyasu himself became Shōgun in 1603, he made Yedo his capital. From that time forward, Japan thus practically had two capitals—Kyōto in the west, where the Mikado dwelt in stately seclusion, and Yedo in the east, whence the Shōgun exercised his authority over the whole land. On the fall of the Shōgunate in 1868, the Mikado came and took up his abode in Yedo; and on the 18th September of the same year the name of the city was changed to Tōkyō or Tōkei, these being alternative methods of pronouncing the Chinese characters 東京, with which the name is written. The meaning of the term *Tōkyō* is "eastern capital." It was given in contradistinction to *Sai-kyō*, or "western capital," the name by which Kyōto was rechristened. Tōkyō has been burnt down and built up again many times, fires having formerly been as common in this wooden city as at Constantinople. At the present day it covers an immense area, popularly estimated at four *ri* in every direction, in other words,

---

\* *Kei* is pronounced nearly like the English name of the letter *k*.

a hundred square miles. The population has been officially stated to be, in round numbers, 1,943,000 (according to another enumeration, 1,867,000). But this includes the whole metropolitan district (*Tōkyō-Fu*). The city proper has about 1,389,000, and grows steadily. The average number of inhabitants per house is 4.63.

The principal sights of Tōkyō are the Shiba temples, with the tombs of the Shōguns of the Tokugawa dynasty, near which is the best *Kwankōba* or Bazaar: the view over the city from the tower on Atago-yama; the Shintō temple named *Shōkonsha*, erected to the memory of the loyal troops slain in battle; the adjacent museum of military objects, called the *Yūshū-kwan*; Ueno Park, with tombs and temples similar to those of Shiba, and also some interesting museums; the popular Buddhist temple of Asakusa, to say nothing of such modern Europeanised buildings as the government offices, banks, hospitals, prisons, etc., which will have an interest for some persons. In addition to these, according to the time of year, there are the cherry-blossoms of Mukōjima, Ueno, and Shiba, the irises of Horikiri, the wistarias of Kameido, and the chrysanthemums of Dango-zaka. It is also worth while paying a visit to one of the theatres, of which the *Kabuki-za* and *Meiji-za* are the best, and to the wrestling-matches held at the temple of Ekō-in and elsewhere. But after all, the chief sight of Tōkyō to one fresh from home is Tōkyō itself—the quaint little wooden houses, which brick structures in foreign style have only partially replaced, the open-air life of the people, the clatter of the clogs, the jinrikishas, the dainty children powdered and rouged for a holiday outing, the picturesque native dress which Western fashions and fabrics have not succeeded in driving out, the indescribably grotesque combinations of this dress with billycock hats, Inverness capes, and crochet tippets. There are also the attractions of the shops, which make Mr. Percival Lowell truly observe that “To stroll down the *Broadway* of Tōkyō of an evening is a liberal education in every day art,”

for—as he adds—“whatever these people fashion, from the toy of an hour to the triumphs of all time, is touched by a taste unknown elsewhere.” Mr. Lowell, as an artist in words, does not add what we, simple recorders of facts, are bound to do, that with so much to appeal to the eye, Tōkyō also has not a little that appeals to the nose.

**Books recommended.** For facts, Murray's *Handbook for Japan; The Castle of Yedo*, by T. R. H. McClatchie, in Vol. VI. Part I., and *The Feudal Mansions of Yedo*, by the same author, in Vol. VII. Part III, of the “Asiatic Transactions. For picturesque descriptions and for “talky-talky,” the pages of globe-trotters and book-makers innumerable.

**Topsy-turvydom.** It has often been remarked that the Japanese do many things in a way that runs directly counter to European ideas of what is natural and proper. To the Japanese themselves our ways appear equally unaccountable. It was only the other day that a Tōkyō lady asked the present writer why foreigners did so many things topsy-turvy, instead of doing them naturally, after the manner of her country-people. Here are a few instances of this contrariety:—

Japanese books begin at what we should call the end, the word *finis* (終) coming where we put the title-page.\* The foot-notes are printed at the top of the page, and the reader inserts his marker at the bottom. In newspaper paragraphs a large full stop is put at the *beginning* of each.

Men make themselves merry with wine, not after dinner, but before. Sweets also come before the *pièces de résistance*.

The whole method of treating horses is the opposite of ours. A Japanese (of the old school) mounts his horse on the right side, all parts of the harness are fastened on the right side, the mane is made to hang on the left side; and when the horse is brought

---

\* A traveller of no mean order of talent (Mr. H. T. Finck, in his *Lotos-Time in Japan*), who visited the Far East a few years ago and fell in love with Japanese ways of doing things, goes so far as to recommend us all, from his own experience as journalist and critic, to follow the Japanese plan, and to begin even our English books at the last page,—so much trouble will it save, and so much better sense will such a method of perusal impart to the majority of contemporary authors.

home, its head is placed where its tail ought to be, and the animal is fed from a tub at the stable door.

Boats are hauled up on the beach stern first.

On leaving an inn, you fee not the waiter but the proprietor.

The Japanese do not say "north-east," "south-west," but "east-north," "west-south."

They carry babies, not in their arms, but on their backs.

In addressing a letter they employ the following order of words: "Japan, Tōkyō, Akasaka District, such-and-such-a street, 19 Number, Smith John Mr."—thus putting the general first, and the particular afterwards, which is the exact reverse of our method.

Many tools and implements are used in a way which is contrary to ours. For instance, Japanese keys turn in instead of out, and Japanese carpenters saw and plane towards, instead of away from, themselves.

The best rooms in a house are at the back; the garden, too, is at the back. When building a house, the Japanese construct the roof first; then, having numbered the pieces, they break it up again, and keep it until the substructure is finished.

In making up accounts, they write down the figures first, the corresponding items next.

Politeness prompts them to remove, not their head-gear, but their foot-gear,

Their needle-work sometimes curiously reverses European methods. Belonging as he does to the inferior sex, the present writer can only speak hesitatingly on such a point. But a lady of his acquaintance informs him that Japanese women needle their thread instead of threading their needle, and that instead of running the needle through the cloth, they hold it still and run the cloth upon it. Another lady, long resident in Tōkyō, says that the impulse of her Japanese maids is always to sew on cuffs, frills, and other like things, topsy-turvy and inside out. If that is not the *ne plus ultra* of contrariety, what is?

Men in Japan are most emphatically *not* the inferior sex. When (which does not often happen) a husband condescends to take his wife out with him, it is my lord's jinrikisha that bowls off first. The woman gets into hers as best she can, and trundles along behind. Still, women have some few consolations. In Europe, gay bachelors are apt to be captivated by the charms of actresses. In Japan, where there are no actresses to speak of, it is the women who fall in love with fashionable actors.

Strangest of all, after a bath the Japanese dry themselves with a damp towel!

**Book recommended.** *Japanese Topsy-turvydom*, by Mrs. E. S. Patton.

**Torii** is the name of the peculiar gateway, formed of two upright and two horizontal beams, which stands in front of every Shintō temple. According to the orthodox account, it was originally a perch for the sacred fowls (*tori*—"fowl"; *i*, from *iru*—"dwelling"), which gave warning of daybreak, but in later times—its origin being forgotten—it came to be regarded as a gateway or even as a mere symbolic ornament, so that whole avenues of *tori* were sometimes erected, while the Buddhists also adopted it, employing it to place tablets on with inscriptions, and ornamenting it in various new-fangled ways, such as turning up the corners of the transverse beams, etc., etc. Accordingly, when the "purification" of the Shintō temples took place\* after the restoration of the Mikado in 1868, one of the earliest governmental acts was the removal of these tablets. Ever since that time, too, the simplest form of *torii* has alone been set up, because alone considered ancient and national.

The present writer's opinion, founded partly on a comparison of the Japanese and Luchuan forms of the word (Jap. *torii*, Luch. *turi*), is that the orthodox etymology and the opinions derived from it are alike erroneous, that the origin both of the word and of the thing is obscure, but that indications deserving

---

\* See p. 361.

consideration point to the probability of both having been brought over from the Asiatic continent. The Koreans erect somewhat similar gateways at the approach to their royal palaces; the Chinese *p'ai lou*, serving to record the virtues of male or female worthies, seems related in shape as well as in use, and the word *turan*, found in Northern India to denote a gateway of strikingly cognate appearance, gives matter for reflection. Finally, we have the fundamental fact that almost every Japanese art and almost every Japanese idea can be traced back ultimately to the Asiatic mainland,—an intellectual dependence so constant as to raise a presumption in favour of a Chinese or Buddhist (that is Indian) origin for any obscure individual item. The linguistic argument (appreciable only by specialists) will be found in a paper by the present writer in the "Journal of the Anthropological Institute of Great Britain" for 1895, entitled *A Preliminary Account of the Luchuan Language*.

**Trade.** Barely has the fiat of a prince—a particular edict issued on a particular day—succeeded in deflecting the whole current of a nation's enterprise for over two centuries. This happened in Japan when the country was closed in A.D. 1624, foreigners expelled, foreign learning, foreign trade, and foreign travel alike prohibited. Till then the Japanese merchants and adventurers had been a power in Eastern seas. From that date their movements were curbed, their spirit broken, their very junks, if above a certain size, destroyed. A dribble of trade with the Dutch at Nagasaki, on the furthest confines of the empire, was all that remained. Internal trade itself, just springing into vigorous life after centuries of civil conflict, was hampered by the very perfection (along certain lines) and thoroughness of the feudal system. Not only did the central government at Yedo behave towards commerce as a stepmother; each Daimyō drew a cordon round his daimiate. Sumptuary laws, rules, restrictions innumerable, monopolies, close guilds, the embargo on new inventions, the predominance of aristocratic

militarism and of the artistic spirit,—all these things together formed an overwhelming obstacle to trade on a grand scale. The Japanese merchant, relegated to a rank below that of the peasant, became what he has ever since remained,—a poor, timid creature with unbusinesslike methods, paltry aims, and a low moral standard.

Of course such an outline of a state of society, drawn with three or four rapid strokes, must not be accepted as a finished picture. Details would modify the impression. The Japan of the seventeenth and eighteenth centuries did possess some few important business houses, notably that of Mitsui, with whom the government formed a sort of left-handed alliance, borrowing money from it and employing it in sundry ways, much as our mediæval kings were wont to employ the Jews and the goldsmiths. The memoirs of those times preserve also the names of a few individual speculators—for instance, Kinokuni-ya Bunzaemon, who made a fortune in oranges and squandered it in riotous living. Some of our western business expedients, or at least adumbrations of them, were in use, such as clearing-houses, bills of lading, and bills of exchange. The two commercial centres were Yedo and Ōsaka. Here was conducted the sale of the government rice; for the peasants paid their taxes in kind, not in money, then a scarce commodity. Around these official rice transactions all other business revolved. It varied little year by year, scarcely any scope being afforded for private enterprise.

When the country was thrown open about forty years ago, the few large commercial houses of old standing were looked to for the purpose of establishing relations with the strangers newly arrived. They declined to venture on what appeared a hazardous experiment. Such a new departure was also beyond the mental grasp of the lesser merchants, who worked together in guilds along lines settled for them beforehand by time-honoured precedents. Thus it fell out that Yokohama

and the other foreign settlements became resorts for unscrupulous and irresponsible men,—a calamity, truly, not only then but afterwards; for the taint has persisted, notwithstanding partial improvement. The Europeans at the ports have naturally judged of the Japanese by the only specimens with whom they came in contact. The Japanese officials on the other hand, and to some extent the Japanese public at large, have looked askance at the foreign merchant, because of his connection with a class indisputably contemptible. Notwithstanding his opportunities for becoming closely acquainted with Europeans and their business methods, the average native trader has still much to learn. Peculiarly vague are his ideas of such matters as punctuality, regard for truth, the keeping of a promise. He is a bad loser even of the smallest sums, and will not consider it derogatory to get out of a contract, should the market go against him.\* In short, so far from practising honesty

---

\* The Cornes-Kimura case is so thoroughly representative, so typical, that we cannot resist giving a full statement of it, notwithstanding its length:—

On the 29th May, 1894, Messrs. Cornes and Co., of Yokohama, sold to Mr. Kimura Riemon, for delivery in September and October, 100 bales yarn, "Purple Hokuroku" quality, but to be marked with a red ticket in place of a purple one. On arrival of the goods, Mr. Kimura refused to take delivery, on the plea of difference of colour in the ticket. Finding it impossible to get him to make a settlement of any kind, Messrs. Cornes & Co. decided to take the case into court; but before doing so, they, for reasons peculiar to this country, placed a statement of the dispute before the Yarn Traders' Guild of Yokohama. This body replied that another application should be made by the firm to Mr. Kimura, failing which it would endeavour to bring the two parties together, and failing that again, the case might be filed. Acting upon this, Mr. Kimura was again approached. He asked for time to consider, and was given to the 10th March. No reply having been received by the 15th, and Messrs. Cornes being anxious to avoid litigation, they requested the personal intervention of three prominent members of the Guild. But Mr. Kimura refusing even to discuss the matter with them, the case was at length taken into court. After several hearings, beginning on the 16th May, before Judge Akiyama and two assistants, judgment was postponed at the request of the defendant till the 9th July. Three days before this term, namely on the 6th July, the standing committee of the Guild waited

for its own sake, he has not yet learnt that honesty is, even from a selfish point of view, the best policy. Furthermore, his timidity leads him to seek the aid of government in nearly every large undertaking,—aid which has not always been judiciously applied.

Despite the obstacles engendered by such a state of things, the external trade initiated and still mostly carried on by the foreign merchants at the treaty ports, has expanded amazingly. As a rule we abstain from statistics, because they become antiquated almost as soon as published. The following table, however, may perhaps have permanent interest :—

---

on the foreign firm to inform them that, unless they agreed to withdraw the suit and accept as a settlement the delivery of 35 bales (cancelling the sale of the remaining 65 bales) at contract price, and waive all charges, *no dealer would be allowed to call at their office*. Messrs Cornes declined these terms, but on the following day (7th July) offered to withdraw the suit, provided Mr. Kimura would take delivery of 50 bales at contract price, and pay half interest and fire insurance. This offer the Guild declined. Judgment was delivered on the 9th July, to the following effect :

“Defendant to take delivery of the hundred bales, and to pay the sum “of \$29,528 50, together with insurance, interest, and godown rent, minus “90 days usually allowed pending delivery.” The three items mentioned amounted to \$837.70, \$139 61, and \$112 respectively.

On the 18th July a general meeting of the Yokohama Guild was held, with the result that Mr. Kimura's action was fully endorsed, and Messrs. Cornes condemned to a boycott in which the dealers of Tōkyō, Nagoya, and other important towns were to be asked to join. The next incident was a visit to Messrs. Cornes by representatives of the Tōkyō Guild, who came to say that they were determined to settle the dispute, and that unless their arbitration were accepted, they would join the boycott. Messrs. Cornes, having previously ascertained from an eminent Japanese lawyer that Japanese law could afford them no redress, were compelled to accept the Tōkyō Guild's offer of arbitration, and were thereupon informed that Mr. Kimura would take delivery within sixty days of the hundred bales at \$93½ per picul, the foreign firm to pay its own legal expenses. This, which meant a loss of over \$2,500, had perforce to be submitted to.

Mr. Kimura, it may be interesting to note, had been Manager of the Yokohama Specie Bank and was at the time a Director, besides being on the Municipal Board, President of the Yokohama Guild, and one of the wealthiest men in the city.

Of the large trade indicated by these figures, Great Britain takes the lion's share. In the last year officially tabulated—1896—the direct trade done by Japanese transacting business in accordance with western methods amounted to 81,000,000 *yen*, that is, to a fraction between a quarter and a third of the total. Their ambition is now to oust the foreign merchant, by obtaining exclusive control of the markets which he opened for them. The chief check to this ambition will be found in the want of probity already alluded to, and in a careless levity which prevents them from improving or even maintaining the standard of excellence of their products.

The internal development of the country has meanwhile marched forward with extraordinary rapidity under a government whose object is no longer to impede, but to foster progress and money-making. Our articles on INDUSTRIALISM, RAILWAYS, SHIPPING, SILK, TEA, etc., may be referred to for a few details.

**Books recommended.** *The British Consular Trade Reports.*—We have often thought that the most amusing, the most characteristic, and at the same time the most astounding book about Japan still remains to be written, and might be written by any merchant at any of the ports. He would easily obtain the subject-matter by drawing on his experience, which must be half-painful and wholly grotesque. The book should consist of anecdotes of Japanese unbusinesslikeness, giving names, dates, and matter-of-fact details,—nothing more. The plainer the style, the more startling the effect.

**Treaties and Treaty Revision.** <sup>1</sup> Japan's first treaty with a foreign power was that wrung from her on the 31st March, 1854, by the terror which Commodore Perry's "black ships" had inspired; but the treaty now in force with the United States is a later one, concluded in 1858. Perhaps one ought to mention a later date still,—October, 1869; for it was then that Austria signed her treaty with Japan, and, owing to the action of the most favoured nation clause, all treaties previously concluded with the United State, Holland, Russia, Great Britain, France, Portugal, Prussia, Switzerland, Belgium, Italy, Denmark, Spain, Sweden, and the North German Confederation, are practically merged in this Austrian treaty. China's treaty with Japan dates from 1871; but that is a separate matter. The list of the older treaties is completed if we add those concluded with Hawaii and Peru in 1870 and 1872 respectively.

---

\* Subject to a postscript which will be found on p. 419 we leave this article exactly as it appeared in the last edition, chiefly because it may be thought to possess historic interest, partly also because,—though new treaties have since been signed with the various Western powers,—they have not yet come into force, Portuguese subjects alone, so far as we are aware, being already under Japanese jurisdiction. A new treaty was naturally dictated to China after her defeat in 1895. By its terms the Chinese in Japan come under Japanese law, but the converse does not hold good, Japan having extraterritorial rights in China.

The chief feature of the treaties is the opening to foreign trade and residence of the ports of Yokohama, Kōbe, Ōsaka, Nagasaki, Niigata, and Hakodate, which are accordingly termed the "Open Ports" together with Tōkyō, the capital. "Treaty Limits" include a radius of 10 *ri* (about  $24\frac{1}{2}$  miles) around each port, within which radius foreigners may travel without passports. Furthermore, the foreigners are guaranteed "extritoriality," that is to say, exemption from the jurisdiction of the Japanese law-courts. Lastly, the Tariff Convention attached to the Treaties provides for a very low scale of import dues,—mostly five per cent *ad valorem*. We say lastly; but this commercial side of the matter has been the most important of all in practice; for if foreigners do not come here to trade, what do they come for? Needless to say that the above is the merest outline of documents which treat of many other matters commonly stipulated for between nation and nation, unless indeed they be taken for granted. Such are, for instance, the clauses providing for the free exercise of the Christian religion by foreign residents, and for assistance to be given to shipwrecked mariners.

So far the treaties as they stand. How to get them revised has been the chief crux of Japanese diplomacy for many years past. The matter is a complicated one, involving, as it does on the foreigners' part, the surrender of commercial and legal privileges that have been enjoyed for a long term of years,—involving, too, the extremely delicate question as to the fitness of Japan for admission into the family of Christian nations on equal terms. Legally, Japan had a claim to the revision of the treaties as far back as 1872; and the long tarrying of Prince Iwakura's embassy in the United States in 1872-8 was avowedly caused by the desire to conclude a new treaty then and there. But if Sir Francis Adams's account of the proceedings may be trusted, the Japanese authorities themselves ended by requesting a delay. Perhaps there had been gradually borne in

upon them the consciousness that Japan was then in no position to offer suitable guarantees ; nor indeed did her laws and usages approximate to the necessary standard for a whole decade more. A less radical but equally thorny obstacle in the way was the fact that the sixteen or seventeen foreign powers had pledged themselves to act conjointly in their negotiations, and that it was no easy matter to get England, France, Holland, and the rest to consent to any common basis on which a conference might be opened. Some held to the low import dues which favoured the operations of their merchants. Others—all perhaps—hesitated to place their nationals at the mercy of Japanese judges. Thus the *status quo* was preserved for years. One country, the United States, which has always been Japan's kindest patron, did, no doubt, show signs of breaking away from the league of the Western powers, and made a separate treaty in 1876 whereby all the chief points in dispute were surrendered. This treaty, however, contained one clause which invalidated all the rest—a clause to the effect that the treaty was not to go into force until all the other powers should have concluded treaties of a similar purport. America's good-will on this occasion, though doubtless genuine, proved therefore to be of the Platonic order ; and “ the Bingham treaty,” as it was called from the name of the minister who negotiated it, was consigned to the limbo of a pigeon-hole.

True, some declare that the paralysing little clause in this treaty was inserted, not by the American negotiator, but by the Japanese Government itself ! Impossible, it will be said. Improbable, assuredly. Still, when the reader calls to mind what has been mentioned concerning Prince Iwakura's alleged tergiversations, he will be led to hesitate before rejecting the possibility of such a thing. It will be seen immediately below that on two occasions more recent the Japanese negotiators did actually shift their basis at the eleventh hour. And if private individuals often tremble to see their heart's desire on the eve

of accomplishment, and would give worlds to recall it at the last moment, why should not the same be sometimes true of governments ?

Meanwhile Japan's progress in Europeanisation had been such, above all her honest eagerness to reform her laws and legal procedure had been made so clearly manifest, that it began to be acknowledged on all sides, in diplomatic circles and in the home press, that the time had arrived for the admission of her claims, in return for granting which it was understood that she should throw open the whole empire to foreign trade and residence, instead of restricting these to the "Open Ports" of Yokohama, Kōbe, etc., as under the system of extraterritoriality hitherto in vogue. A preliminary conference was held at Tōkyō in 1882, to settle the basis of negotiation. The Japanese proposals included the abolition of extraterritoriality outside the foreign settlements as soon as an English version of the Civil Code should have been published, the abolition of extraterritoriality even in the foreign settlements after a further period of three years, the appointment of no less than twenty-five foreign judges for a term of fifteen years,—the said judges to form a majority in all cases affecting foreigners,—and the use of English as the judicial language in such cases. Diplomacy, in Japan as elsewhere, talks much and moves slowly. To elaborate the scheme here outlined was the arduous work of four years, and 1886 was already half-spent when the great Conference, intended to be final, met at Tōkyō. The English and German representatives led the way by making liberal concessions; and all was progressing to general satisfaction, when suddenly, in July, 1887, on the return from abroad of certain Japanese politicians holding peculiar views of their own, the Japanese plenipotentiaries shifted the basis of their demands, and the negotiations were consequently brought to a standstill.

Nevertheless, as there remained a genuine desire on both sides to get the treaty revision question settled, the attempt to settle

it was not given up. Some of the powers now allowed themselves to be approached singly. Mexico (absurd as it may sound) led the van. To be sure, she had no trade to be influenced, and no citizens in Japan to protect. Anyhow, she made her treaty, which was ratified early in 1889. In the summer of the same year several of the powers followed suit,—first the United States, next Russia, then Germany. France, too, was on the point of signing; and the other powers, though moving less quickly, were also moving in the same direction. Suddenly, like a clap of thunder out of a clear sky, Japanese public opinion—if that term may be employed, for want of a better, to denote the views of the comparatively small number of persons who in Japan think and speak on political subjects,—Japanese public opinion, we say, veered round. Among the new stipulations had been one to the effect that four foreign judges—not twenty-five—were to assist the native bench during the first few years following on treaty revision. This stipulation was denounced on all hands as contrary to the terms of the new Constitution, which had just been proclaimed. But the real objection was elsewhere, and had its root in panic at the idea of Japan being thrown open to foreign trade and residence. For years the opening of the country had been prayed for as a blessing to trade, a means of attracting foreign capital to the mines and industries, a means of making Japanese manners and institutions conform to what were almost universally admitted to be the superior manners and customs of the West. The same anticipations remained, but the inferences drawn from them were reversed. Japan, it was now feverishly asserted, would be swamped by foreign immigration, her national customs would be destroyed, her mines, her industries would all come under foreign control, her very soil would, by lease or purchase, pass into foreign hands, her people would be practically enslaved, and independent Japan would exist no more. Such were the sentiments given voice to in every private conversation, and

re-echoed daily in the press. Nevertheless the Japanese Government, more enlightened than the Japanese public, endeavoured to continue the negotiations for treaty revision. Popular excitement then began to seek more violent vents. The Minister for Foreign Affairs, Count Ōkuma, had his leg blown off by a dynamite bomb. It became evident in October, 1889, that negotiations could no longer be carried on consistently with the public peace, and so the Government once more drew back. Even those treaties which had already been concluded with America, Germany, and Russia were left unratified; and it was proved that the representatives of the other great powers had acted wisely in acting slowly, and had saved their respective governments from a humiliating rebuff. Since that time, the only item of interest connected with this subject has been a public meeting of the foreign residents of Yokohama, held in September, 1890, to protest, not against revision in general, but against unconditional revision which should lightly surrender privileges of trade and jurisdiction obtained long ago and dearly prized.

Such is the story of Japanese treaty revision, so far as it is publicly known. But we have access to no private sources of information, and we are (but for that we thank God) no politician. For Japan's sake it is to be hoped that a matter so nearly concerning her national honour may be settled without much further delay. The outside public of lookers-on will hope so for their own sakes as well. For must it be confessed that this ever-pending question has degenerated into a portentous bore? The new-comer who wishes to make himself agreeable is advised not to touch upon it, for all residents are utterly sick and weary of its very name. When the matter shall have been finally settled on a basis satisfactory to all the high contracting parties, those of us whose lot it is to live in Japan will experience a sense of relief similar to that often felt by Tōkyō residents on a sultry August afternoon, when the discordantly monotonous chirping of the cicadæ suddenly ceases, and is followed by a

delicious silence. But the day when the ratifications are exchanged will be a sorry day for the newspapers, to whom the treaty revision question has been for twenty years a perpetual feast. Native and foreign alike, they have wrangled about it, preached about it, raved about it, above all they have prosed about it, until the worn-out reader begins to envy Job, who, though doubtless called upon to bear up against some few minor inconveniences, was never pestered with Japanese treaty revision. The articles on treaty revision in the "Japan Mail" alone must weigh many tons; and elderly as are the arguments available on so threadbare a subject, the poor things are allowed no rest, but are still perpetually trotted out again and again, in season and out of season, *à propos de bottes*, *à propos* of everything and of nothing, like King Charles's head in the conversation of Mr. Dick. Some of the native papers have, it is true, started a fresh watchword during the last two years, which being interpreted, signifies "treaty revision on a footing of equality.\*" But the real purport of this fair phrase is a suggestion that the foreign powers shall concede everything, and Japan nothing at all. In fact, it is an aggravated case of

" the fault of the Dutch,  
That of giving too little, and taking too much."

\*   \*   \*   \*   \*   †   \*   †

*Postscript.* So far our previous edition. Since then the impossible has come to pass. In 1894, the Radical English ministry of the hour was led to consent to a new treaty on the peculiar Dutch lines just mentioned.† Hereby, either explicitly or else implicitly by the recognition of her legal codes (some of which had not even been published at that date!), Japan obtained the abolition of extraterritoriality, full jurisdiction over British subjects, the right

---

\* *Tantō jōyaku kaisei.*

† For brevity's sake we speak of "the treaty;" but in reality there is more than one document, the question of dues being settled in a separate Commercial Convention.

to fix her own import dues, the monopoly of the coasting trade, and the exclusion of British subjects from the purchase of land, or even from the leasing of land for agricultural or mining purposes. In exchange, Great Britain obtained —— ? The only items revealed by a microscopic scrutiny are that every one will be permitted to travel unmolested in the interior,—but in practice this privilege was enjoyed already, as would naturally be the case in any country ranking as civilised,—and that property may be leased in the interior for residential and commercial purposes; but this is a doubtful advantage, entailing, as it will, on merchants the expense of keeping up establishments in various cities for the same trade which has hitherto more economically centred in the Open Ports.

But all this is merely the beginning of the trouble. As the date for the enforcement of the treaty draws near, and men have to make arrangements accordingly, they find themselves confronted with obstacles which could never have arisen had the negotiators exercised ordinary foresight. The ambiguity of the document is not the least of its defects. A careful consideration of what was *not* stipulated for, as well as of what was, shows that under the new treaty British subjects may not improbably lose their privilege of publishing newspapers and holding public meetings, in a word, their birthright of free speech, and that it is doubtful whether their doctors and lawyers will be allowed to practise without a Japanese diploma. Even the period for which leases can be held was left so uncertain as to have become the subject of endless controversy, the conditions of the sale and re-purchase of leases in what had hitherto been the foreign “Concessions” were left uncertain; the right to employ labour and to start industries was left uncertain. With things in this state, with the great English steamship companies, the P. and O. and Canadian Pacific, probably prevented from carrying passengers between the ports, and with new duties of from thirty to forty per cent levied precisely on those articles

which are prime necessities to us but not to the Japanese,\* could any one imagine such terms having ever been agreed to except as the result of a disastrous war? Some of the evils apprehended may not, after all, arise; but in any case, no thanks will be due to Downing Street. Perhaps the authorities there consider that a state of things endurable by British communities in certain other foreign countries should be good enough for the British community in Japan. But surely there is a difference between acquiescing in inconveniences of immemorial date, and running one's neck into a new noose.

The British treaty once concluded, other countries followed suit, and by this time most of the treaties are revised. To some of the powers the nature of the terms mattered little; for the preponderance of British commercial and residential interests has always been so great in Japan as almost to make it a case of "Eclipse first, and the rest nowhere." The United States—the only power which might have been expected to stand out for better terms—was precluded from so doing, partly by her traditional policy of exceptional patronage of Japan, partly, as it would seem, by the fact of her government, like that of Great Britain, having failed to appreciate in all its practical details, the position which affairs would assume when the old order should have been abrogated and the new set up in its stead. Meanwhile the China War took place, Japan's marvellous successes in which made resistance to any of her demands doubly difficult. Since its termination, there has been a perfect stampede of treaty-making.

Diplomacy is not a game of chance. It is a game of skill, like chess, at which the better player always wins. From the point of view of a patriotic Japanese, the Japanese negotiators, from

---

\* It is edifying to the student of human nature to see the Japanese smugly impose this new high tariff themselves, and at the same time to listen to the shrill screams of all the chambers of commerce throughout the country at the imposition of similar dues on their own products by the United States.

1873 down to the present day, deserve the warmest encomiums; and though we ourselves are not Japanese, we cannot refrain from offering to Marquis Itō, Viscount Aoki, and all others concerned on their side the frank expression of our sincere admiration. By playing a waiting game, by letting loose Japanese public opinion when convenient and then representing it as a much more potent factor than it actually is, by skilful management of the press, by most adroitly causing the chief seat of the negotiations to be shifted from Tōkyō, where some of the local diplomats possessed an adequate knowledge of the subject, to the European foreign offices which possessed little or none, by talent, perseverance, patience, tact exercised year after year,—in a word, by first-rate diplomacy, they gained a complete victory over their adversaries, and at last revenged on the West the violence which it had committed in breaking open Japan a generation before.

From the point of view of patriotic Englishmen, the residents in Japan (that is, the class which possesses the best knowledge of the state of the case) almost unanimously regard the British Foreign Office with contempt, for having allowed itself to be so grossly misled and roundly beaten. But what avails that? It is a hundred years since Nelson noted the humiliating fact that "England seldom gains anything by negotiation, except the being laughed at," and still the Foreign Office slumbers and blunders on as in Nelson's day. Diplomacy is not our talent. We must continue to endure British ineptitude in counsel, as we endure war, pestilence, and American journalism.

The date appointed for the new English treaty to come into force is 1899.\* A suggestion has, however, been made to the

---

\* That is to say, July, 1899, is the earliest optional date, subject to the proviso that the Civil Code must have been in force for at least twelve months before. The fixing of the exact date rests absolutely with the Japanese Government, which will notify the British Government of its good pleasure in the matter (!) To suit Japanese convenience, the new duties will probably come into force in October, 1898.

effect that some new difficulty, with consequent delay, may grow out of the uncertainty regarding the status of the self-governing British colonies under the terms of the document in question. From hints dropped in the native press one might even gather that history was about to repeat itself, and that, as on previous occasions, Japan's feverish desire for the new departure may be replaced by equal eagerness to maintain the *status quo*. But should the plunge be made, British subjects will, by good luck, though not by the good management of their rulers, share, under the most favoured nation clause, in certain slight ameliorations stipulated for in the German and other subsequently concluded treaties.

**Books recommended.** *Treaties and Conventions concluded between Japan and Foreign Nations.* The *Translations of the Japanese Codes.*

**Tycoon.** The literal meaning of this title is "great prince." It was adopted by the Shōguns in comparatively recent times, in order to magnify their position in the eyes of foreign powers. Perhaps it may have been suggested by the title *Tai-kun-shu* (大君主), used to denote the Queen in the English treaties with China. In any case, the idea was produced in the minds of European diplomats that the Shōgun was a sort of Emperor, and he was dubbed "His Majesty" accordingly.

**Vegetable Wax.** The vegetable wax-tree is closely allied to the lacquer-tree, both being sumachs of the genus *Rhus*. The berries of the wax-tree are crushed in a press; and the exuding matter, which is intermediate in appearance between wax and tallow, is warmed, purified, and made into candles. It is known in commerce as "Japan wax," and the tree producing it must not be confounded with the famous tallow-tree of China (*Stillingia sebicifera Euphorbiaceæ*). The berries of the lacquer-tree are sometimes utilised in the same way as those of the vegetable wax-tree.

**Volcanoes.** See GEOGRAPHY.

**Woman (Status of).** Japanese women are most womanly—kind, gentle, faithful, pretty. But the way in which they are treated by the men has hitherto been such as might cause a pang to any generous European heart. No wonder that some of them are at last endeavouring to emancipate themselves. A woman's lot is summed up in what are termed "the three obediences,"—obedience, while yet unmarried, to a father; obedience, when married, to a husband and that husband's parents; obedience, when widowed, to a son. At the present moment, the greatest lady in the land may have to be her husband's drudge, to fetch and carry for him, to bow down humbly in the hall when my lord sallies forth on his walks abroad, to wait upon him at meals, to be divorced at his good pleasure. "Society," in our sense of the word, does not exist. Men do not call on ladies, can scarcely even ask after them. Two grotesquely different influences are now at work to undermine this state of slavery—one, European theories concerning the relation of the sexes, the other, European clothes! The same fellow who struts into a room before his wife when she is dressed *à la japonaise*, will let her go in first when she is dressed *à l'euro péenne*. Probably such acts of courtesy do not extend to the home where there is no one by to see; for most Japanese men, even in this very year of grace 1898, make no secret of their disdain for the female sex. Still it is a first step that even on *some* occasions, consideration for women should at least be simulated.

Have we explained ourselves? We would not have it thought that Japanese women are actually ill-used. There is probably very little wife-beating in Japan, neither is there any zenana system, any veiling of the face. Rather is it that women are all their lives treated more or less like babies, neither trusted with the independence which our modern manners allow, nor commanding the romantic homage which was woman's dower

in mediæval Europe ; for Japanese feudalism—so different from the feudalism of the West in all but military display—knew nothing of gallantry. A Japanese knight performed his valiant deeds for no such fanciful reward as a lady's smile. He performed them out of loyalty to his lord or filial piety towards the memory of his papa, taking up, maybe, the clan vendetta and perpetuating it. Our own sympathies, as will be sufficiently evident from the whole tenour of our remarks, are with those who wish to raise Japanese women to the position occupied by their sisters in Western lands. But many resident foreigners—male foreigners, of course—think differently, and the question forms a favourite subject of debate. The only point on which both parties agree is in their praise of Japanese woman. Says one side, "She is so charming that she deserves better treatment,"—to which the other side retorts that it is just because she is "kept in her place" that she is charming. The following quotation is from a letter to the present writer by a well-known author who, like others, has fallen under the spell. "How sweet," says he, "Japanese woman is! All the possibilities of the race for goodness seem to be concentrated in her. It shakes one's faith in some Occidental doctrines. If this be the result of suppression and oppression, then these are not altogether bad. On the other hand, how diamond-hard the character of the American woman becomes under the idolatry of which she is the object. In the eternal order of things, which is the higher being,—the childish, confiding, sweet Japanese girl, or the superb, calculating, penetrating, Occidental Circe of our more artificial society, with her enormous power for evil and her limited capacity for good?"—That Japanese women are charming, either because or in spite of the disadvantages of their position, is a fact which the admiration of foreign lady travellers proves more conclusively than aught else ; for in their case such admiration cannot be suspected of any *arrière-pensée*. How many times have we not heard European ladies go into

ecstasies over them, and marvel how they could be of the same race as the men! And closer acquaintance does but confirm such views.

The following treatise by the celebrated moralist Kaibara so faithfully sums up the ideas hitherto prevalent in Japan concerning the relations between the sexes, that we shall give it in full, notwithstanding its length. The title, which is literally "The Greater Learning for Women" (*Onna Daigaku*), might be more freely rendered by "The Whole Duty of Woman."\*

#### THE GREATER LEARNING FOR WOMEN.

"Seeing that it is a girl's destiny, on reaching womanhood, to go to a new home, and live in submisson to her father-in-law and mother-in-law, it is even more incumbent upon her than it is on a boy to receive with all reverence her parents' instructions. Should her parents, through excess of tenderness, allow her to grow up self-willed, she will infallibly show herself capricious in her husband's house, and thus alienate his affection, while, if her father-in-law be a man of correct principles, the girl will find the yoke of these principles intolerable. She will hate and decry her father-in-law, and the end of these domestic dissensions will be her dismissal from her husband's house, and the covering of herself with ignominy. Her parents, forgetting the faulty education they gave her, may indeed lay all the blame on the father-in-law. But they will be in error; for the whole disaster should rightly be attributed to the faulty education the girl received from her parents.

"More precious in a woman is a virtuous heart than a face of beauty. The vicious woman's heart is ever excited; she glares wildly around her, she vents her anger on others, her words are

---

harsh and her accent vulgar. When she speaks, it is to set herself above others, to upbraid others, to envy others, to be puffed up with individual pride, to jeer at others, to outdo others, —all things at variance with the 'way' in which a woman should walk. The only qualities that befit a woman are gentle obedience, chastity, mercy, and quietness.

"From her earliest youth, a girl should observe the line of demarcation separating women from men; and never, even for an instant, should she be allowed to see or hear the slightest impropriety. The customs of antiquity did not allow men and women to sit in the same apartment, to keep their wearing apparel in the same place, to bathe in the same place, or to transmit to each other anything directly from hand to hand. A woman going abroad at night must in all cases carry a lighted lamp; and (not to speak of strangers) she must observe a certain distance in her intercourse even with her husband and with her brothers. In our days, the women of the lower classes, ignoring all rules of this nature, behave themselves disorderly; they contaminate their reputations, bring down reproach upon the heads of their parents and brothers, and spend their whole lives in an unprofitable manner. Is not this truly lamentable? It is written likewise, in the 'Lesser Learning,' that a woman must form no friendship and no intimacy, except when ordered to do so by her parents or by the 'middleman.'\* Even at the peril of her life, must she harden her heart like rock or metal, and observe the rules of propriety.

"In China, marriage is called *returning*, for the reason that a woman must consider her husband's home as her own, and that, when she marries, she is therefore returning to her own home. However humble and needy may be her husband's position, she must find no fault with him, but consider the poverty of the household which it has pleased Heaven to give her as the order-

---

\* See page 271.

ing of an unpropitious fate. The Sage of old\* taught that, once married, she must never leave her husband's house. Should she forsake the 'way,' and be divorced, shame shall cover her till her latest hour. With regard to this point, there are seven faults, which are termed 'the Seven Reasons for Divorce : ' (i) A woman shall be divorced for disobedience to her father-in-law or mother-in-law. (ii) A woman shall be divorced if she fail to bear children, the reason for this rule being that women are sought in marriage for the purpose of giving men posterity. A barren woman should, however, be retained if her heart is virtuous and her conduct correct and free from jealousy, in which case a child of the same blood must be adopted ; neither is there any just cause for a man to divorce a barren wife, if he have children by a concubine. (iii) Lewdness is a reason for divorce. (iv) Jealousy is a reason for divorce. (v) Leprosy, or any like foul disease, is a reason for divorce. (vi) A woman shall be divorced, who, by talking overmuch and prattling disrespectfully, disturbs the harmony of kinsmen and brings trouble on her household. (vii) A woman shall be divorced who is addicted to stealing.—All the 'Seven Reasons for Divorce' were taught by the Sage. A woman, once married and then divorced, has wandered from the 'way,' and is covered with the greatest shame, even if she should enter into a second union with a man of wealth and position.

"It is the chief duty of a girl living in the parental house to practise filial piety towards her father and mother. But, after marriage, her chief duty is to honour her father-in-law and mother-in-law—to honour them beyond her own father and mother—to love and reverence them with all ardour, and to tend them with every practice of filial piety. While thou honourest thine own parents, think not lightly of thy father-in-law ! Never should a woman fail, night and morning, to pay

---

\* Confucius.

her respects to her father-in-law and mother-in-law. Never should she be remiss in performing any tasks they may require of her. With all reverence must she carry out, and never rebel against, her father-in-law's commands. On every point must she inquire of her father-in-law and mother-in-law, and abandon herself to their direction. Even if thy father-in-law and mother-in-law be pleased to hate and vilify thee, be not angry with them, and murmur not! If thou carry piety towards them to its utmost limits, and minister to them in all sincerity, it cannot be but that they will end by becoming friendly to thee.

“A woman has no particular lord. She must look to her husband as her lord, and must serve him with all worship and reverence, not despising or thinking lightly of him. The great life-long duty of a woman is obedience. In her dealings with her husband, both the expression of her countenance and the style of her address should be courteous, humble, and conciliatory, never peevish and intractable, never rude and arrogant;—that should be a woman's first and chiefest care. When the husband issues his instructions, the wife must never disobey them. In doubtful cases, she should inquire of her husband, and obediently follow his commands. If ever her husband should inquire of her, she should answer to the point;—to answer in a careless fashion were a mark of rudeness. Should her husband be roused at any time to anger, she must obey him with fear and trembling, and not set herself up against him in anger and frowardness. A woman should look on her husband as if he were Heaven itself, and never weary of thinking how she may yield to her husband, and thus escape celestial castigation.

“As brothers-in-law and sisters-in-law are the brothers and sisters of a woman's husband, they deserve all her reverence. Should she lay herself open to the ridicule and dislike of her husband's kindred, she would offend her parents-in-law, and do harm even to herself, whereas, if she lives on good terms with

them, she will likewise rejoice the hearts of her parents-in-law. Again, she should cherish, and be intimate with, the wife of her husband's elder brother,—yea, with special warmth of affection should she reverence her husband's elder brother and her husband's elder brother's wife, esteeming them as she does her own elder brother and elder sister.

“Let her never even dream of jealousy. If her husband be dissolute, she must expostulate with him, but never either nurse or vent her anger. If her jealousy be extreme, it will render her countenance frightful and her accents repulsive, and can only result in completely alienating her husband from her and making her intolerable in his eyes. Should her husband act ill and unreasonably, she must compose her countenance and soften her voice to remonstrate with him ; and if he be angry and listen not to the remonstrance, she must wait over a season, and then expostulate with him again when his heart is softened. Never set thyself up against thy husband with harsh features and a boisterous voice !

“A woman should be circumspect and sparing in her use of words ; and never, even for a passing moment, should she slander others or be guilty of untruthfulness. Should she ever hear calumny, she should keep it to herself and repeat it to none ; for it is the retailing of calumny that disturbs the harmony of kinsmen and ruins the peace of families.

“A woman must be ever on the alert, and keep a strict watch over her own conduct. In the morning she must rise early, and at night go late to rest. Instead of sleeping in the middle of the day, she must be intent on the duties of her household, and must not weary of weaving, sewing, and spinning. Of tea and wine she must not drink overmuch, nor must she feed her eyes and ears with theatrical performances, ditties, and ballads. To temples (whether Shintō or Buddhist) and other like places, where there is a great concourse of people, she should go but sparingly till she has reached the age of forty.

"She must not let herself be led astray by mediums and divineresses and enter into an irreverent familiarity with the gods, neither should she be constantly occupied in praying. If only she satisfactorily perform her duties as a human being, she may let prayer alone without ceasing to enjoy the divine protection.

"In her capacity of wife, she must keep her husband's household in proper order. If the wife be evil and profligate, the house is ruined. In everything she must avoid extravagance, and both with regard to food and raiment must act according to her station in life, and never give way to luxury and pride.

"While young, she must avoid the intimacy and familiarity of her husband's kinsmen, comrades, and retainers, ever strictly adhering to the rule of separation between the sexes; and on no account whatever should she enter into correspondence with a young man. Her personal adornments and the colour and pattern of her garments should be unobtrusive. It suffices for her to be neat and cleanly in her person and in her wearing apparel. It is wrong in her, by an excess of care, to obtrude herself on other people's notice. Only that which is suitable should be practised.

"She must not selfishly think first of her own parents, and only secondly of her husband's relations. At New Year, on the Five Festivals,\* and on other like occasions, she should first pay her respects to those of her husband's house, and then to her own parents. Without her husband's permission, she must go nowhere, neither should she make any gifts on her own responsibility.

"As a woman rears up posterity, not to her own parents, but to her father-in-law and mother-in-law, she must value the latter even more than the former, and tend them with all filial piety. Her visits, also, to the paternal house should be rare after marriage. Much more then, with regard to other friends, should

---

\* See page 315.

it generally suffice for her to send a message to inquire after their health. Again, she must not be filled with pride at the recollection of the splendour of her parental house, and must not make it the subject of her conversations.

“However many servants she may have in her employ, it is a woman’s duty not to shirk the trouble of attending to everything herself. She must sew her father-in-law’s and mother-in-law’s garments, and make ready their food. Ever attentive to the requirements of her husband, she must fold his clothes and dust his rug, rear his children, wash what is dirty, be constantly in the midst of her household, and never go abroad but of necessity.

“Her treatment of her handmaidens will require circumspection. These low and aggravating girls have had no proper education; they are stupid, obstinate, and vulgar in their speech. When anything in the conduct of their mistress’s husband or parents-in-law crosses their wishes, they fill her ears with their invectives, thinking thereby to render her a service. But any woman who should listen to this gossip must beware of the heartburnings it will be sure to breed. Easy is it by reproaches and disobedience to lose the love of those, who, like a woman’s marriage connections, were all originally strangers; and it were surely folly, by believing the prattle of a servant-girl, to diminish the affection of a precious father-in-law and mother-in-law. If a servant girl be altogether too loquacious and bad, she should speedily be dismissed; for it is by the gossip of such persons that occasion is given for the troubling of the harmony of kinsmen and the disordering of a household. Again, in her dealings with these low people, a woman will find many things to disapprove of. But if she be forever reproofing and scolding, and spend her time in bustle and anger, her household will be in a continual state of disturbance. When there is real wrong-doing, she should occasionally notice it, and point out the path of amendment, while lesser faults should be quietly

endured without anger. While in her heart she compassionates her subordinates' weaknesses, she must outwardly admonish them with all strictness to walk in the paths of propriety, and never allow them to fall into idleness. If any is to be succoured, let her not be grudging of her money; but she must not foolishly shower down gifts on such as merely please her individual caprice, but are unprofitable servants.

"The five worst maladies that afflict the female mind are: indocility, discontent, slander, jealousy, and silliness. Without any doubt, these five maladies infest seven or eight out of every ten women, and it is from these that arises the inferiority of women to men. A woman should cure them by self-inspection and self-reproach. The worst of them all, and the parent of the other four, is silliness. Woman's nature is passive (lit. *shade*). This passiveness, being of the nature of the night, is dark. Hence, as viewed from the standard of man's nature, the foolishness of woman fails to understand the duties that lie before her very eyes, perceives not the actions that will bring down blame upon her own head, and comprehends not even the things that will bring down calamities on the heads of her husband and children. Neither when she blames and accuses and curses innocent persons, nor when, in her jealousy of others, she thinks to set up herself alone, does she see that she is her own enemy, estranging others and incurring their hatred. Lamentable errors! Again, in the education of her children, her blind affection induces an erroneous system. Such is the stupidity of her character that it is incumbent on her, in every particular, to distrust herself and to obey her husband.

"We are told that it was the custom of the ancients, on the birth of a female child, to let it lie on the floor for the space of three days. Even in this may be seen the likening of the man to Heaven and of the woman to Earth; and the custom should teach a woman how necessary it is for her in everything to yield to her husband the first, and to be herself content

with the second place; to avoid pride, even if there be in her actions aught deserving praise; and on the other hand, if she transgress in aught and incur blame, to wend her way through the difficulty and amend the fault, and so conduct herself as not again to lay herself open to censure; to endure without anger and indignation the jeers of others, suffering such things with patience and humility. If a woman act thus, her conjugal relations cannot but be harmonious and enduring, and her household a scene of peace and concord.

“Parents! teach the foregoing maxims to your daughters from their tenderest years! Copy them out from time to time, that they may read and never forget them! Better than the garments and divers vessels which the fathers of the present day so lavishly bestow upon their daughters when giving them away in marriage, were it to teach them thoroughly these precepts, which would guard them as a precious jewel throughout their lives. How true is that ancient saying: ‘A man knoweth how to spend a million pieces of money in marrying off his daughter, but knoweth not how to spend an hundred thousand in bringing up his child!’ Such as have daughters must lay this well to heart.”

\* \* \* \* \*

Thus far our old Japanese moralist. For the sake of fairness and completeness, it should be added that the subjection of women is not carried out in the lower classes of Japanese society to the same extent as in the middle and upper. Poverty makes for equality all the world over. Just as among ourselves woman-worship flourishes among the well-to-do, but is almost, if not entirely, absent among the peasantry, so in Japan the contrary or rather complementary state of things may be observed. The peasant women, the wives of artisans and small traders have more liberty and a higher relative position than the great ladies of the land. In these lower classes the wife shares not only her husband's toil, but his counsels; and if she happen to have

due. The Imperial government has done all in its power to redress the wrongs of the hitherto down-trodden natives.

At one time, the Russians endeavoured to obtain a footing in Yezo; but the opening of Japan nipped this encroachment in the bud. Japanese statesmen eagerly plunged into the task of developing the resources of the island. With this end in view, they created a special executive department, entitled the *Kaitakushi*, and engaged the services of a party of American employés headed by General Capron. Large sums were spent on model farms and other public works, and a fictitious prosperity set in. The bubble burst in 1881, when the *Kaitakushi* was dissolved, since which time the government of the island has undergone repeated reorganisation.

Yezo is interesting from a scientific point of view. The great depth of the Straits of Tsugaru, which separate it from the Main Island, shows that it never—at least in recent geological epochs—formed part of Japan proper. The fauna of the two islands is accordingly marked by notable differences. Japan has monkeys and pheasants, which Yezo has not. Yezo has grouse, which Japan has not. Even the fossils differ on both sides of the straits, though occurring in similar cretaceous formations. Scientific, or rather unscientific, management played a queer trick with the city of Sapporo, if the local gossips are to be credited. The intention—so it is said—was to lay out the city à l'américaine, with streets running due north and south and due east and west. The person entrusted with the orientation of the plan was of course aware of the necessity of allowing for the deviation of the compass; but being under the influence of some misconception, he made the allowance the wrong way, and thus, instead of eliminating the error, doubled it. It is pleasant to be able to add that the result was a practical improvement undreamt of by the mathematicians. The houses, having no rooms either due north or due south, suffer less from the extremes of heat and cold than they would have done had they been built with some

rooms on which the sun never shone, and others exposed to the sun all the year round.\*

**Books recommended.** *Murray's Handbook for Japan*—*Japan in Yezo*, by T. W. Blakiston.—Vol II of Miss Bird's *Unbeaten Tracks in Japan*.

**Yoshiwara.** When the city of Yedo suddenly rose into splendour at the beginning of the seventeenth century, people of all classes and from all parts of the country flocked thither to try their fortune. The courtesans were not behindhand. From Kyōto, from Nara, from Fushimi, they arrived—so the native accounts inform us—in little parties of threes and fours. But a band of some twenty or thirty from the town of Moto-Yoshiwara on the Tōkaidō were either the most numerous or the most beautiful, and so the district of Yedo where they took up their abode came to be called the Yoshiwara.† At first there was no official supervision of these frail ladies. They were free to ply their trade wherever they chose. But in the year 1617, on the representations of a reformer named Shōshi Jin-emon, the city in general was purified, and all the libertinism in it—permitted, but regulated—was banished to one special quarter near Nihon-bashi, to which the name of Yoshiwara attached itself. Later on, in A.D. 1656, when the city had grown larger and Nihon-bashi had become its centre, the authorities caused the houses in question to be removed to their present site on the northern limit of Yedo, whence the name of *Shin* (i.e. New) *Yoshiwara*, by which the place is currently known. Foreigners

---

\* A specialist in such matters calls our attention to the fact that the story has, as the common phrase is, "not a leg to stand on," for the reason that the deviation of the compass is so slight in this part of the world as to be practically insignificant even when doubled. We leave the story, however, as an instance of modern myth-making.

† The weight of authority is in favour of this account of the origin of the name. According to others, the etymology is *yoshi* "a reed," and *hara*, "a moor," and the designation of "reedy moor" would have been given to the locality on account of its aspect before it was built over. There is another Chinese character *yoshi* meaning "good," "lucky," and with this the first two syllables of the name are now usually written (吉原).

often speak of "a Yoshiwara," as if the word were a generic term. It is not so. The quarters of similar character in other cities of Japan are never so called by the Japanese themselves. Such words as *yūjōba* and *kuruwa* are used to designate them.

Japanese literature is full of romantic stories in which the Yoshiwara plays a part. Generally the heroine has found her way there in obedience to the dictates of filial piety in order to support her aged parents, or else she is kidnapped by some ruffian who basely sells her for his own profit. The story often ends by the girl emerging from a life of shame with at least her heart untainted, and by all the good people living happily ever after. It is to be feared that real life witnesses few such fortunate cases, though it is probably true that the fallen women of Japan are, as a class, much less vicious than their representatives in Western lands, being neither drunken nor foul-mouthed. On the other hand, a Japanese proverb says that a truthful courtesan is as great a miracle as a square egg.

In former times, girls could be and were regularly and legally sold into debauchery at the Yoshiwara in Yedo and at its counterparts throughout the land,—a state of things which the present enlightened government has hastened to reform. When we add that a weekly medical inspection of the inmates of all such places was introduced in 1874 in imitation of European ways, that each house and each separate inmate of each house is heavily taxed, and that there is severe police control over all,—we have mentioned all that need here be said on a subject which could only be fully discussed in the pages of a medical work.

**Books recommended.** Mitford's *Tales of Old Japan*, Vol. I. pp. 57—69 (a postscript to the story entitled *The Loves of Gompachi and Komurasaki*).—*The Real Japan*, by Henry Norman, chap. XI.

**Zoology.** Japan is distinguished by the possession of some types elsewhere extinct—for example, the giant salamander,—and also as being the most northerly country inhabited by the

monkey, which here ranges as high as the 41st degree of latitude, in places where the snow often drifts to a depth of fifteen or twenty feet. But in its main features the Japanese fauna resembles that of North China, Korea, and Manchuria,—one indication among many of the direction in which the ancient land connection of Japan with the Asiatic continent must be sought. The Japanese fauna, both terrestrial and marine, is unusually rich. Take a single instance:—there are already a hundred and thirty-seven species of butterflies known, as against some sixty in Great Britain, and over four thousand species of moths, as against some two thousand in Great Britain.

The chief mammals are the monkey (*Inuus speciosus* Tem.), ten species of bats, six species of insectivorous animals, three species of bears, the badger, the marten, the mink (*itachi*), the wolf, the fox, two species of squirrels, the rat, the hare, the wild-boar, the otter, a species of stag, and a species of antelope. Most of our domestic animals are also met with, but not the ass, the sheep, or the goat. Other missing animals are the wild cat and the hedgehog. No less than three hundred and fifty-nine species of birds have been enumerated. We can only here call attention to the *uguisu* (*Cettia cantans* T and Schl.)—a nightingale having a different note from ours—to the handsome copper pheasant, and to the cranes and herons so beloved by the artists of Japan. The cocks with tail feathers ten or fifteen feet long, which have been depicted in books of travels, are an artificial breed produced by careful selection.

Of reptiles and batrachians there are but thirty species. Of these, the already mentioned giant salamander is by far the most remarkable, some specimens attaining to a length of over five feet. There are also some large, but harmless, snakes. The only poisonous snake is a small species of adder (*Trigonocephalus Blomhoffi*), known to the Japanese under the name of *mamushi*. The country folk look on its boiled flesh as a specific for most diseases. The peasants of certain thickly wooded districts also

harbour an inveterate belief in the existence of a kind of boa, which they call *uwabami*, and circumstantial accounts of the swallowing alive of some child or woman by one of these monsters appear from time to time in the vernacular press. Zoologists, however, have not yet given the Japanese boa official permission to exist. Another creature undoubtedly mythical is the bushy-tailed tortoise so often depicted in Japanese art. The idea of it was doubtless suggested by nothing more recondite than the straggling water-weeds that sometimes adhere to the hinder parts of a real tortoise's body.

With regard to fish, Dr. Rein remarks that the Chinese and Japanese waters appear to be richer than any other part of the ocean. The mackerel family (*Scomberoidæ*), more particularly, is represented in great force, the forty species into which it is divided constituting an important element of the food of the people. But the fish which is esteemed the greatest delicacy is the *tai*, a kind of gold-bream. The gold-fish, the salmon, the eel, the shark, and many others would call for mention, had we space to devote to them. Altogether, the number of species of fish inhabiting or visiting Japan cannot fall far short of four hundred.

Insects are extremely numerous, but excepting the beetles, moths, and butterflies, not yet even fairly well-known, so that a rich harvest here awaits some future naturalist. There are two silk-producing moths, the *Bombyx mori* and the *Antheraea yamamai*. Of dragon-flies the species are numerous and beautiful. There are but few venomous insects. The gadfly torments the traveller only in Yezo and in the northern half of the Main Island; the house-fly is a much less common plague than in Europe, except in the silk districts, and the bed-bug is entirely absent. On the other hand, the mosquito is a nightly plague during half the year in all places lying at an altitude of less than 1,500 feet above the sea, and in many even exceeding that height; the *buyu*—a diminutive kind of

gnat—infests many mountainous districts during the summer months, and the flea is unpleasantly common in summer.

The chief crustacea are fresh-water and salt-water crabs, together with crayfishes, which here replace the lobsters of Europe and are often erroneously termed lobsters by the foreign residents. One species of crab (the *Macrocheirus Kämpferi* Sbd.) is so gigantic that human beings have been killed and devoured by it. Its legs are over a yard and a half in length. There is another species—a tiny, but ill-favoured one—which is the object of a singular superstition. The common folk call it *Heike-gani*, that is, the Heike crab. They believe these creatures to be the wraiths of the warriors of the Heike or Taira clan, whose fleet was annihilated at the battle of Dan-no-ura in A.D. 1185.

Of mollusks, nearly twelve hundred species have been described by Dunker, the best authority on the subject; and his enumeration is stated by Dr. Rein to be far from exhaustive. Of sea-urchins twenty-six species are known, and of starfishes twelve species. The coral tribe is well represented, though not by the reef-forming species of warmer latitudes. There are also various kinds of sponges. Indeed, one of the most curious and beautiful of all the many curious and beautiful things in Japan is the Glass Rope Sponge (*Hyalonema Sieboldi*), whose silken coils adorn the shell-shops at Enoshima.

**Books recommended.** The above article is founded chiefly on Rein's *Japan*, p. 157 *et seq.* Rein's treatment of the fishes is specially full, but a good *résumé* of the other classes is given, together with references to the chief authorities on each.—See also Blakiston and Pryer's *Catalogue of the Birds of Japan*, printed in Vol. X. Part I. of the "Asiatic Transactions;" Pryer's *Catalogue of the Lepidoptera of Japan*, in Vol. XI. Part II. and Vol. XII. Part II. of the same, with Additions and Corrections in Vol. XIII. Part I; also the same author's *Rhopalocera Nihonica* and J. H. Leech's *Butterflies from Japan*. Both these are beautifully illustrated.
